

Jonathan Emrich, iOS Mobile Engineer

Saratoga, CA, 925.895.4856, emricht32@gmail.com, <https://www.linkedin.com/in/jonathan-emrich/>

SUMMARY

Dynamic iOS Mobile Engineer with over 10 years of experience in developing innovative applications and robust features. Proven expertise in architecting MVVM structures, enhancing unit test coverage significantly, and implementing Kotlin Multiplatform solutions. Delivered AI-based SDKs and optimized BLE interactions for automotive solutions, ensuring low latency and high reliability. Adept at leveraging technical skills to create impactful user experiences, ready to drive value in the crypto investor space.

WORK EXPERIENCE

Dec 2023 – Jan 2025	Mobile Lead, Curbside SOS	Remote
	• Led a team of mobile engineers in architecting and developing applications that enhance connectivity between drivers and motorists. • Designed and implemented MVVM architecture for iOS applications, significantly improving maintainability and scalability. • Pioneered the development of a Kotlin Multiplatform Mobile (KMM) library, streamlining the integration of shared functionality across platforms. • Elevated unit test coverage from less than 1% to over 60% within three months, ensuring robust code quality. • Developed comprehensive offline-first features utilizing Swift Data to support edge and no-connectivity scenarios.	
Dec 2022 – Dec 2023	Consultant, Zero1	San Francisco Bay Area
	• Established a software consulting firm focused on educating developers on the effective use of LLMs and their integration into development workflows. • Formulated custom LLM integrations for clients, primarily serving as internal agents over private company documents.	
Jan 2017 – Nov 2022	Lead/Senior Staff Software Developer, Nauto	Palo Alto
	• Developed an SDK for AI-based vehicle monitoring by integrating BLE peripherals for real-time data streaming. • Optimized iOS code for Bluetooth Low Energy (BLE) interactions, minimizing latency and enhancing reliability. • Contributed to backend development utilizing Golang and AWS, ensuring seamless API communication.	
Dec 2015 – Jan 2017	TPM/Senior Staff Software Developer, Continental ITS	San Jose
	• Spearheaded the development of BLE-based iOS applications focused on automotive security solutions. • Engineered and implemented Bluetooth-enabled remote access systems. • Ensured compliance with ISO 9001, ISO 26262, and Auto-SPIICE standards.	
Apr 2013 – Dec 2015	Senior Software Developer, Mercedes-Benz R&D	Sunnyvale
	• Developed Bluetooth Low Energy (BLE) protocols for Remote Park Pilot and secure vehicle access applications. • Created Smart Cross Connect, an application that integrates navigation, media, and IoT analytics.	

EDUCATION

Aug 1999 – May 2004	Sonoma State University Bachelor of Science, Computer Science	Rohnert Park
Aug 1999 – May 2004	Sonoma State University Bachelor of Science, Mathematics	Rohnert Park

SKILLS

Swift	SwiftUI
Objective-C	React Native
Kotlin	C++
Golang	Bash
Core Data	Core Bluetooth
Combine	Async/Await
Notification Center	GCD
AVFoundation	CoreLocation
MapKit	Vision
CoreML	Alamofire
URLSession	BLE Optimization
NFC Integration	IoT Connectivity
TFLite	Keras
OpenCV	Eigen
REST APIs	Protobufs
WebSockets	JSON
AWS (EC2, ECS, S3, CloudFormation)	Kubernetes
Azure (Basic working knowledge)	Technical Leadership
Cross-Functional Collaboration	Project Management
Mentorship	Communication
Problem Solving	iOS Development
Networking	UIKit
Agile Methodologies	Cryptocurrency Knowledge
Performance Optimization	

LANGUAGES
