

PROFESSIONAL SUMMARY

- Over **11 years of experience** in the IT industry, specializing in designing, developing, and testing enterprise applications.
- Proficient in **SDLC methodologies**, including **Agile** ensuring efficient software development and delivery.
- Expertise in **.NET technologies**, including **C# 10.0, ASP.NET Core Web API, ASP.NET MVC, Multithreading, and Collections**, for building high-performance applications.
- Strong understanding of software **design patterns** such as **MVC, Factory, Singleton, and CQRS**, along with experience in **use case diagrams and UML** for application design.
- Followed architectures like **Onion Architecture, MVC Architecture, N-Tier Architecture, and Microservices** for scalable and modular application development.
- Hands-on experience with **.NET frameworks**, including **ASP.NET Core Web App, ASP.NET Core Web API, Microservices, and ASP.NET MVC**.
- Expertise in **Web Services**, including **RESTful and SOAP**, for seamless integration between distributed applications.
- Experience with **ORM frameworks** such as **ADO.NET, Entity Framework, and Entity Framework Core** for efficient data access.
- Skilled in working with data formats such as **JSON and XML** for data exchange and processing.
- Experience with **Azure Cloud, including API Gateway**, for secure and scalable application deployment.
- Proficient in authentication and security protocols such as **OAuth2, SSL, and JWT** for secure communication and access management.
- Strong **front-end development** skills with **Angular 10+, TypeScript, AngularJS, HTML, CSS, JavaScript, Bootstrap, jQuery, and Ajax** for building responsive UI.
- Expertise in working with both **SQL databases (SQL Server, PostgreSQL)** and **NoSQL databases (MongoDB)** for structured and unstructured data management.
- Experienced in writing **PL/SQL stored procedures, functions, and triggers** for database operations and performance optimization.
- Hands-on experience with **message queues** like **MSMQ and RabbitMQ** for asynchronous processing and event-driven architecture.
- Proficient in **testing frameworks** for .NET Core such as **XUnit** for unit testing and test automation.
- Experience with **front-end testing frameworks** like **Karma, Jasmine, Jest, Mocha, and Chai** for UI testing and validation.
- Skilled in using **testing tools** like **Postman, SOAP UI, and Swagger UI** for API testing and validation.
- Expertise in **Azure DevOps CI/CD** from a developer's perspective, automating build and deployment pipelines.
- Hands-on experience with **cloud platforms** like **AWS and Azure** for developing and deploying applications in cloud environments.
- Proficient in **version control tools** like **Git, SVN, and TFS** for code management and collaboration.
- Experience with **build tools** such as **Visual Studio, Visual Studio Code, and SQL Server Management Studio** for efficient development.
- Proficient in **logging tools** like **Log4Net** for tracking and debugging application issues.

TECHNICAL SKILLS

Programming Languages	C/C++, C#, VB.Net, Java8, Core Java SE 8, Python 3/3.6.
Object Oriented Modeling	UML, Rational Unified Process.
Design/Architecture	MVVM, MVC, Microservices, SOLID Principles, Dependency Injection.
IDE	Visual Studio 2012, 2014, 2015, 2017, 2019, 2022, Visual Studio Code.
Web Development	ASP.NET Core 8.0, ASP.NET MVC 4.0-5.0, ASP.NET WEB API, .NET Core 8.0, JavaScript, XML, HTML5, CSS3, AJAX, Blazor, Razor.
.NET Framework/Libraries	.NET 3.5-4.8, ADO.NET, EF 6.0, EF Core 8.0, NuGet, SignalR, ASP.NET Core 8.0, .NET Core 8.0, Windows Workflow Foundation (WF), NHibernate.
JavaScript Libraries	jQuery, JSON, Bootstrap, JavaScript, React JS, Angular 2/7/8, Vue.js.
Messaging Services	Apache Kafka, AWS SQS, MSMQ.
Databases	MSSQL Server, T-SQL/SQL Server (2005/2008/2012/2014), SSMS2019, Oracle 10g , PostgreSQL, MongoDB, Dynamo DB.

Cloud	AWS (CDK in TypeScript, ECS, ECR, EC2, Cognito, FSX, S3, Lambda, DynamoDB, API Gateway, CloudFormation, EKS), Azure (Azure DevOps, AKS, Azure Functions, API Gateway, Key Vault, Cosmos DB, Storage Accounts, Logic Apps, Azure Worker Roles, Application Insights)
Devops & CI/CD Tools	Azure DevOps, GitHub Actions, Jenkins, AWS CodePipeline, Docker, Kubernetes, SonarQube, CodeQL, Terraform, Ansible, AgroCD.
Infrastructure as Code (IaC)	AWS CDK (TypeScript), Terraform, CloudFormation, Kubernetes, Azure Resource Manager (ARM) Templates.
Web server/Application Servers	Apache, Nginx, IIS, Tomcat, Microsoft Azure App Service, WebLogic, Jetty.
Authentication/Authorization	ASP.NET Identity 1.0/2.0, OAuth 1.0/2.0, OAuth2, AWS Cognito, JWT, OpenID Connect, and OpenID Connect.
Testing/Documentation	NUnit, xUnit.net, Selenium WebDriver, Postman, Swagger, Jest, Istanbul (Code Coverage).
Advance Technologies	Prompt Engineering.
AZURE Cloud Services	Azure Storage, Azure functions, Logic Apps, App services, Web Jobs, Key Vault, Active Directory, Azure Search, Azure Runbook Account, AAD B2C, Cosmos DB, SQL DB, Application Insights, Monitor, Log Analytics, Azure CLI, CI-CD with Azure DevOps.
Application Development	C#, ASP.NET, .NET CORE, ADO.NET, LINQ, XML, XSLT, T-SQL, WCF, .NET 4.0, MVC Framework, Web API, Entity Framework, HTML, CSS, Java Script, Angular, PowerShell, SQL, T-SQL.
Message Queues	Apache Kafka (Event Streaming), AWS SQS, MSMQ.
Tools/Source Control	ADO, VSTS, SOAP UI, WinSCP, Fiddler, Postman, Azure Storage Explorer, SSMS, Visual Studio, VS Code, Windows PowerShell ISE, Git, TFS, Tortoise SVN
Other	Agile, Coded UI Automation testing, WCF, WPF, REST, SOAP, Web API, MS Excel, TCP/IP, SharePoint 2000-2005, LINQ, Entity Framework, TDD, Windows, LINUX, IOS, JDBC, Spring Boot, Spring MVC, Spring IOC, Linux commands, Shell scripting.

PROFESSIONAL EXPERIENCE

Client: Citizen's Bank, Johnston, RI.

Role: Sr .Net Full Stack Developer.

Duration: Jan 2022 – Present.

Responsibilities:

- Applied Agile methodologies for project management and development, ensuring faster delivery and better collaboration across teams.
- Designed and implemented **Microservices architecture** for scalable and maintainable application development. Developed **ASP.NET Core Web API** for creating modular microservices, improving maintainability and scalability.
- Designed, developed, and deployed cloud infrastructure (**ECS, ECR, EC2, Cognito, FSX**) using AWS Cloud Development Kit (CDK) in TypeScript, ensuring scalable and maintainable cloud architecture.
- Implemented **Infrastructure as Code (IaC) with AWS CDK**, enabling automated provisioning and management of cloud resources.
- Implemented RESTful web services for seamless communication across various services and platforms, improving system integration and scalability.
- Utilized **Entity Framework Core 8.0** for efficient database interactions, enabling rapid development and data access within the application.
- Configured and managed **AWS ECS (Elastic Container Service)** and **ECR (Elastic Container Registry)** to orchestrate and manage containerized applications.
- Utilized JSON for data interchange between client and server, ensuring a lightweight and human-readable format for API communication.
- Implemented **AWS Cognito** for secure authentication and user identity management across microservices.
- Leveraged **Azure API Gateway** for managing and routing requests to the backend services, enhancing scalability and security of APIs.
- Implemented **OAuth2 authentication** for securing API endpoints and providing authorized access to third-party applications.
- Developed **responsive front-end applications using Angular 15, TypeScript, HTML, CSS, Bootstrap**, ensuring high-quality and user-friendly interfaces. Integrated Angular components with RESTful APIs for seamless data exchange and real-time updates.
- Utilized **SQL Server 2019** for relational data management, including designing schemas, writing stored procedures, and performing query optimization.
- Employed **Apache Kafka** for building scalable, distributed event-streaming platforms to handle real-time data processing across services.
- Applied **xUnit** for unit testing and component testing in the .NET environment to ensure quality and correctness of the application logic. Implemented end-to-end component testing to validate the interaction of various application layers.
- Used **Karma and Jasmine** for unit testing Angular components, ensuring quality control of the front-end application. Integrated **Protractor** for performing end-to-end testing of Angular applications to ensure that all features work correctly across browsers.
- Used **Postman for API testing** and **Swagger UI** for interactive API documentation and testing of endpoints.
- Configured **Azure DevOps pipelines for Continuous Integration and Continuous Deployment (CI/CD)** to automate the build, test, and release processes, improving code quality and accelerating development. Managed source code versioning and releases through Git repositories in Azure DevOps.
- Integrated **SonarQube** for static code analysis to ensure adherence to coding standards and improve code quality.

- Utilized **Git** for version control, enabling efficient collaboration and version management across development teams.
- Used **Visual Studio 2022** for .NET application development, ensuring seamless integration with cloud platforms and third-party services.
- Employed **Log4Net** for logging and troubleshooting, ensuring visibility into application behavior for maintenance and debugging purposes.
- Managed tasks, issues, and project milestones using **JIRA**, facilitating effective project tracking and collaboration across teams.

Environment: C#, .NET Core 8.0, ASP.NET Core Web API, SQL Server 2019, WinForms, WCF, RESTful Services, ADO.NET, JavaScript, TypeScript, Web Services, X Path, AWS CDK (TypeScript), AWS ECS, ECR, EC2, Cognito, FSX, S3, Lambda, API Gateway, CloudFormation, Azure DevOps, Entity Framework Core 8.0, Visual Studio 2022, IIS, EDMX, AJAX, jQuery, Angular 15, Infrastructure as Code (IaC) with AWS CDK, Terraform, CloudFormation, Azure Cognitive Search, Azure Storage Account, Azure Functions, Logic Apps, Azure Application Insights, Azure Key Vault, Azure App Config Store, SendGrid, Apache Kafka, PowerShell, Azure Storage Explorer, Azure Storage Emulator, Docker, Kubernetes, SonarQube, CodeQL, xUnit, NUnit, Jest, Istanbul.

Client: Mayo Clinic Rochester, Minnesota

Role: .NET Full Stack Developer.

Duration: Aug 2019 to Dec 2021.

Responsibilities:

- Applied **Agile SDLC methodologies** for iterative development, ensuring constant collaboration and continuous delivery.
- Implemented **Onion Architecture**, creating a maintainable and scalable system structure with well-defined layers.
- Developed **ASP.NET Core Web APIs** to build scalable and secure back-end services.
- Designed **RESTful Web Services** to enable efficient communication between systems and services.
- Worked extensively with **Entity Framework Core** for ORM-based data access, simplifying interactions with **SQL Server** databases.
- Ensured smooth data exchange by utilizing **JSON** for API responses and requests.
- Implemented **OAuth2** authentication for secure and scalable user authorization in web services.
- Utilized **Azure API Gateway** for managing, securing, and routing API requests.
- Developed front-end interfaces using **Angular 5**, **HTML**, **CSS**, **JavaScript**, and **Bootstrap**, ensuring dynamic and responsive user experiences.
- Integrated **MongoDB** for scalable, high-performance NoSQL data storage in certain modules.
- Utilized **MS MQ/RabbitMQ** for reliable message queuing and real-time communication across distributed systems.
- Wrote and executed unit tests using **XUnit** for .NET components, ensuring high code quality and functionality.
- Implemented unit tests for the **Angular** application with **Karma** and **Jasmine**, ensuring the stability and quality of the front-end.
- Employed **Postman** for API testing, ensuring the proper function of all exposed endpoints.
- Used **Swagger UI** for documenting and testing RESTful APIs, enhancing API discoverability.
- Built and maintained **CI/CD pipelines** using **Azure DevOps**, automating testing and deployment processes for improved efficiency.
- Utilized **Azure Cloud** technologies for deploying scalable, cloud-based solutions.
- Leveraged **Git** for version control, collaborating effectively with team members and managing the project codebase.
- Employed **SonarQube** for static code analysis to ensure that code quality standards were met.
- Integrated **Log4Net** for detailed application logging, enhancing troubleshooting and performance monitoring.
- Managed project tasks using **JIRA**, streamlining task tracking and project management within Agile sprints.
- Utilized **Visual Studio** and **Visual Studio Code** for development, debugging, and deployment of web services and front-end applications.
- Wrote **SQL queries** for manipulating relational data in **SQL Server** and ensuring efficient data retrieval.
- Created **SSIS packages** for ETL processes to integrate external data into **SQL Server**.
- Worked with **WCF** services to enable cross-platform interoperability.
- Developed and tested **Blazor** components, leveraging **.NET backend services** to build interactive user interfaces.
- Implemented **Kafka** for real-time messaging and event-driven architecture.

Environment: .NET, Visual Studio, ASP.NET MVC, WPF, WCF, LINQ, Webservices, Vue.js, OOP, HTML, JavaScript, WinForms, Dependency Injection, C#, Azure DevOps, Excel, XML, XPath, CSS, MS SQL Server, ASP. Net using VB .NET and, RestSharp, NUnit / xUnit, C#, Web Forms, Azure DevOps, jQuery, Azure Service Bus, SQL, Typescript, GIT, VSTS.

Client: State of NY, NYC, New york

Role: .Net Full Stack Developer.

Duration: June 2016 to July 2019.

Responsibilities:

- Implemented a robust enterprise-level project utilizing **ASP.NET MVC** and **C#**, with **Microsoft SQL Server** serving as the backend database to ensure optimal performance and scalability.
- Designed and developed sophisticated **C#** components that seamlessly integrated with **ASP.NET MVC**, efficiently implementing intricate business logic within the application.
- Developed and implemented **RESTful APIs** to enhance backend functionality and integrate third-party systems seamlessly with the application architecture.
- Utilized **Entity Framework** for ORM to map application models to database tables, enabling efficient data access and manipulation.

- Extensively used **PostgreSQL** as a database management system, ensuring seamless data storage and retrieval, and applying advanced PostgreSQL features such as table partitioning, indexing, and stored procedures to optimize performance.
- Leveraged **AWS** services, including **EC2, S3, Lambda, RDS, DynamoDB, and IAM**, for deploying, managing, and scaling applications in the cloud environment, contributing to the robustness of the infrastructure.
- Developed UI elements using **ASP.NET MVC**, ensuring a modular, maintainable, and reusable application structure, improving user experience across multiple platforms.
- Utilized **Swagger** for API documentation, enabling standardized, interactive API specifications for testing and consumption.
- Configured **security** features using **Form-Based Authentication** and **Role-Based Authorization** to implement a robust access control system across the application.
- Integrated **React** with the backend services using **RESTful APIs**, improving the user interface's performance and responsiveness.
- Implemented **data validation protocols** on **Web Forms** using **.NET Validation Controls** and **JavaScript** to ensure user input accuracy and prevent potential issues.
- Contributed to deploying applications to AWS using **AWS CLI** and **SDKs**, automating infrastructure provisioning, management tasks, and scaling as needed.
- Ensured seamless integration of **AWS services** such as **DynamoDB** and **Lambda** for a serverless architecture, improving efficiency and reducing operational overhead.
- Designed and implemented **SQL Stored Procedures** and triggers for optimized database operations, significantly improving query performance.
- Collaborated with the team and **Project Manager** to ensure alignment with client expectations, discussing requirements, progress, and improvements during regular client meetings.
- Developed reports using **SQL Server Reporting Services (SSRS)**, enabling comprehensive data analysis and reporting.
- Created and published custom **workflow forms** using **InfoPath 2007**, enhancing data capture and process automation, integrating them into **SharePoint 2007**.
- Administered **SharePoint Portal Server 2007** tasks such as user provisioning, permissions management, and group creation to optimize collaboration within the organization.
- Involved in setting up, configuring, and managing **Kubernetes clusters** on various cloud platforms or on-premises, streamlining containerized application management.
- Actively participated in **Agile** project methodologies, attending **sprint meetings, stand-ups**, and delivering consistent updates to the team for smoother project execution.
- Extensively worked with **XUnit** for testing the application, ensuring high-quality code and seamless integration by automating unit testing.
- Used **TFS** for version control, ensuring proper management of codebases, branches, and deployments across various environments.
- Employed **Visual Studio** and **SQL Server Management Studio** for code development, debugging, and database management, contributing to efficient project workflow and smooth deployment.
- Used **Log4Net** for logging errors and application events, ensuring traceability of application activities and easy debugging in production environments.

Environment: ASP.NET, C#, Microsoft SQL Server, ADO.NET, Web Forms, .NET Validation Controls, JavaScript, Form-Based Authentication, Role-Based Authorization, RESTful, WCF, Web-APIs, Web Services, C# WinForms, WPF, DOM, JavaScript, jQuery, VB.NET, SOAP, XML, SQL Server Reporting Services (SSRS), SQL Stored Procedures, Triggers, InfoPath 2007, SharePoint 2007, SharePoint Portal Server, Active Directory.

Client: Careington Frisco, TX

Role: .Net Developer.

Duration: March 2015 to May 2016.

Responsibilities:

- Developing web-based solutions by using **Visual Studio, .NET, C#, AJAX, MVC, Coded UI, SSMS, Json, jQuery, XHTML, and ASP.NET Web forms** related to pension plans and based on the needs of each client.
- Developed various modules using **HTML 5, Bootstrap**.
- Developed and assisted in migration of web application to **Angular 7** Application. I took the responsibility of
- Leveraged Angular resources for all data access, encapsulating URLs, and standardizing data access interfaces.
- Created custom directives for re-usable components (multi-filed form elements, background file uploads, etc.)
- Leveraged **Angular 4** for developing application using, **HttpClientModule** for **REST** calls and used loads hand **jQuery** to process **JSON** and **XML** then providing them to components that are in need.
- Knowledge of XML related technologies such as **XML/XSL, XSLT, DTD, XML Schema, DOM, SAX, SOAP, WSDL, Web-Services, and VBScript**.
- Expertise in creating and scheduling complex **SSIS** packages for transferring data from multiple sources into **SQL Server, Access, and Excel** by using **SSIS** and **DTS of SQL Server**.
- Worked with the Design team to assist in the development of high-quality software for **Microservice applications**.
- Implemented **Angular Service calls** using **Angular Factory**.
- Experience **debugging Node.js**, profiling memory and CPU usage.
- Experience **deploying Node.js** into production and scaling applications beyond single instances.
- Experience with **Node.js** using web server-based frameworks such as **Express**.

- Experience in creating complex **SSIS** Packages with error handling using control and dataflow elements.
- Performance tuning and optimization of procedures and queries.
- Skilled in Docker orchestration using tools like Docker Swarm or Kubernetes for managing containerized applications at scale
- Experience in creating complex **SSIS** packages using proper control and data flow elements.
- Experienced in Kubernetes container orchestration platform for automating deployment, scaling, and management of containerized applications.
- Developed **ASP.NET** Core Web API based on departmental requirements and specifications.
- Worked with advanced concepts of **ASP.NET Core MVC** such as Models and Providers, Filters used for developing backend technology.
- Created custom SharePoint sites, sub sites, Document Libraries, Lists and List views to collaborate the Affiliates using **visual studio**.
- Integrated **SQL** and Access data tables with the SharePoint lists and created the custom web parts to display the **SQL** data in the SharePoint portal pages.
- Developed a **system services, SOAP** application platform which can be used by all web applications utilizing **WCF services**.

Environment: Visual Studio.net (2017), Agile, C#, Coded UI, Angular, ASP.NET WEB API, .Net Core, Classic ASP , HTML5, CSS3, Bootstrap, jQuery, Json, REST, SOAP, XML, ASP.NET, WCF, SSMS, MVC, TDD, LINQ, JavaScript, EP Plus, Excel, TFS, Windows.

Client: Tech Mahindra, Hyderabad. India

Role: Software Developer.

Duration: Dec2013 to March 2015

Responsibilities:

- Developing web-based solutions by using **Visual Studio, .NET, C#, AJAX, MVC, Coded UI, SSMS, Json, jQuery, XHTML, and ASP.NET Web forms** related to pension plans and based on the needs of each client.
- Developed various modules using **HTML 5, Bootstrap**.
- Developed and assisted in migration of web application to **Angular 7** Application. I took the responsibility of
- Leveraged Angular resources for all data access, encapsulating URLs and standardizing data access interfaces.
- Created custom directives for re-usable components (multi-filed form elements, background file uploads, etc.)
- Leveraged **Angular 4** for developing application using, **HttpClientModule** for **REST** calls and used **loads** hand **jQuery** to process **JSON** and **XML** then providing them to components that are in need.
- Knowledge of XML related technologies such as **XML/XSL, XSLT, DTD, XML Schema, DOM, SAX, SOAP, WSDL, Web-Services, and VBScript**.
- Expertise in creating and scheduling complex **SSIS** packages for transferring data from multiple sources into **SQL Server, Access, and Excel** by using **SSIS** and **DTS of SQL Server**.
- Worked with the Design team to assist in the development of high-quality software for **Microservice applications**.
- Implemented **Angular Service calls** using **Angular Factory**.
- Experience **debugging Node.js**, profiling memory and CPU usage.
- Experience **deploying Node.js** into production and scaling applications beyond single instances.
- Experience with **Node.js** using web server-based frameworks such as **Express**.
- Experience in creating complex **SSIS** Packages with error handling using control and dataflow elements.
- Performance tuning and optimization of procedures and queries.
- Experience in creating complex **SSIS** packages using proper control and data flow elements.
- Developed **ASP.NET** Core Web API based on departmental requirements and specifications.
- Worked with advanced concepts of **ASP.NET Core MVC** such as Models and Providers, Filters used for developing backend technology.
- Created custom SharePoint sites, sub sites, Document Libraries, Lists and List views to collaborate the Affiliates using **visual studio**.
- Integrated **SQL** and Access data tables with the SharePoint lists and created the custom web parts to display the **SQL** data in the SharePoint portal pages.
- Developed a **system services, SOAP** application platform which can be used by all web applications utilizing **WCF services**.

Environment: Visual Studio.net (2017), Agile, C#, Coded UI, Angular, ASP.NET WEB API, .Net Core, Classic ASP , HTML5, CSS3, Bootstrap, jQuery, Json, REST, SOAP, XML, ASP.NET, WCF, SSMS, MVC, TDD, LINQ, JavaScript.

EDUCATION

Completed my bachelor's in from JNTUH.
