

PROFESSIONAL SUMMARY:

- 7+ years of experience designing, developing, and deploying enterprise-grade applications across Banking, Insurance, and Healthcare domains, leveraging Java/J2EE, Spring Boot, Microservices, Angular, and AWS Cloud.
- Strong expertise in Java/J2EE (8/11/12), Spring Boot, Spring MVC, Spring Data JPA, and Hibernate for building scalable, modular, and maintainable enterprise applications.
- In-depth knowledge of Microservices architecture using Spring Cloud, enabling resilient, loosely coupled services and cloud-native deployments across large-scale systems.
- Skilled in RESTful API development using JSON, OpenAPI, and Swagger, supporting integration across distributed enterprise applications and partner systems.
- Knowledge of SOAP web services for legacy system integration, ensuring interoperability in regulated domains like banking, insurance, and healthcare.
- Proficient in frontend technologies including Angular (9/11), React.js, JavaScript, TypeScript, HTML5, CSS3, and Bootstrap for building modern single-page applications.
- Strong understanding of responsive UI and accessibility standards, ensuring cross-browser compatibility and enhanced user experience for enterprise portals
- Experience with relational databases including Oracle, MySQL, PostgreSQL, and SQL Server, covering schema design, indexing, and query optimization.
- Knowledge of NoSQL databases such as MongoDB, Cassandra, and Couchbase for high-performance storage of unstructured and semi-structured data.
- Skilled in writing complex SQL queries, stored procedures, triggers, and views to support transactional processing, analytics, and reporting requirements.
- Understanding of transaction management, optimistic locking, and audit logging, ensuring data integrity and regulatory compliance across applications.
- Hands-on experience with event-driven systems using Kafka, JMS, and ActiveMQ for real-time notifications, messaging, and high-volume data processing.
- Knowledge of AWS services such as EC2, S3, RDS, Lambda, DynamoDB, and CloudWatch for deploying secure, scalable, and highly available cloud applications.
- Familiar with Infrastructure as Code (IaC) using Terraform and Ansible to automate provisioning, configuration, and deployment of cloud infrastructure.
- Expertise in containerization with Docker and orchestration using Kubernetes/OpenShift for deploying microservices-based applications in CI/CD pipelines.
- Strong experience with CI/CD tools like Jenkins, GitHub Actions, TeamCity, Maven, and Gradle for automated builds, testing, and deployments.
- Knowledge of logging and monitoring tools such as Log4j2, SLF4J, SonarQube, and ELK stack to track performance, errors, and audit requirements.
- Proficient in TDD and BDD practices, leveraging JUnit, Mockito, Selenium, and Cucumber to ensure high-quality and compliant software delivery.
- Experienced in Agile Scrum methodology, including sprint planning, backlog grooming, daily standups, and retrospectives for cross-functional collaboration.
- Knowledge of Unix/Linux systems and shell scripting for automation, system monitoring, and batch processing of critical tasks.
- Familiar with Eclipse, IntelliJ IDEA, and VS Code IDEs, leveraging development tools and plugins for efficient coding and debugging.
- Expertise in API-first development for scalable, reusable, and secure services supporting multi-channel integration and third-party access.
- Understanding of security and encryption standards for protecting sensitive data such as PII, PHI, and financial records in enterprise systems.
- Knowledge of compliance frameworks including HIPAA (Healthcare), SOX (Banking), and PCI-DSS (Insurance) for regulated industry applications.
- Skilled in state management using React Redux and Angular services, enabling seamless UI interactions and predictable data flow across applications.
- Experience with Template-driven and Reactive Forms to implement accurate validation rules on both client and server sides.
- Familiar with Postman, SOAP UI, and Cypress for API testing, functional validation, and regression automation in enterprise workflows.
- Hands-on with DevOps practices, including monitoring, automated scaling, continuous delivery, blue-green deployments, and rollback strategies.

- Strong knowledge of build and dependency management tools including Maven, Gradle, and Artifactory for consistent, reliable builds.
- Experienced with version control systems like Git, Bitbucket, and SVN, implementing branching strategies and collaborative workflows.
- Skilled in debugging, performance optimization, and problem-solving to deliver high-performing and resilient enterprise-grade applications.

TECHNICAL SKILLS:

Programming Languages	Java (Core Java, Java 8/11/17), SQL, PL/SQL
Java/J2EE Technologies	Servlets, JSP, EJB, JSTL, JDBC, JMS, JAX-RS, JAX-WS, JPA, JUnit, Mockito.
Web Technologies	HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap, AJAX, XML, JSON
Front-End Frameworks	AngularJS (1.5/2/4/8/11/13), React JS
Back-End Frameworks	Spring Boot, Spring Batch, Spring MVC, Spring IOC, Spring ORM, Spring JDBC, Spring AOP, Spring Security, Spring Cloud, Hibernate, Struts
Databases	Oracle, MySQL, PostgreSQL, MongoDB, Cassandra
Web Services	REST, SOAP
Cloud Platforms	AWS (EC2, S3, RDS, DynamoDB, SNS, SQS, Lambda, IAM, Route 53, CloudWatch)
Containerization	Docker, Kubernetes
Build and CI/CD Tools	Jenkins, Git, Bitbucket, Maven, ANT, Gradle
Application/Web Servers	Apache Tomcat, WebSphere, WebLogic
Security	Spring Security, OAuth
Logging and Monitoring	Log4J, SLF4J, Splunk, Kibana
Testing Frameworks	JUnit, Mockito, Postman, SOAP UI
Version Control	Git, Bitbucket, SVN

PROFESSIONAL EXPERIENCE:

Client: Origin Bank, Dallas TX

Dec 2022- Present

Role: Sr. Java Full Stack Developer

Responsibilities:

- Architected and implemented microservices ecosystems using Java 11, Spring Boot, Angular 9/11, TypeScript, Docker, Kubernetes, and AWS for robust, maintainable banking solutions.
- Transitioned monolithic banking applications to microservices using 12-factor methodology, enabling independent deployment, scalability, and maintainability.
- Designed system architecture, selected technology stacks, and created implementation roadmaps, leading Agile teams with Scrum and Kanban methodologies.
- Developed microservices and REST APIs with Spring Boot, Spring Cloud, Spring Security, and Spring Integration, incorporating validations, exception handling, and Postman testing.
- Implemented API gateways with AWS API Gateway to enhance routing, resilience, and centralized service management.
- Leveraged AWS services including EC2, S3, RDS, ELB, Auto Scaling, CloudWatch, SNS, and SQS to ensure high availability, performance, and monitoring.
- Employed Java 11 features such as Streams API, functional programming, reactive frameworks, Fork/Join, and enhanced HTTP clients for performance optimization.
- Built real-time streaming pipelines with Apache Kafka and Kafka Streams, enabling event-driven architecture and reducing turnaround times.
- Implemented advanced security practices including OAuth 2.0, JWT, API keys, encryption, auditing, and Nginx reverse proxy/load balancing.
- Containerized applications using Docker and orchestrated deployments with Kubernetes (AWS EKS), reducing infrastructure management efforts.
- Developed Angular-based frontends (Angular 9/11) with reusable TypeScript components, Angular Router, and responsive designs for seamless user experience.

- Extensively used Angular features including forms, modules, DOM manipulation, event handling, filters, and HTTP requests for dynamic front-end functionality.
- Conducted frontend testing with Jasmine, Karma, and Protractor, implementing peer reviews to maintain UI development best practices.
- Optimized Oracle and MongoDB databases, including schema design, indexing, caching, connection pooling, authentication, authorization, and encryption.
- Developed microservices using Spring Boot, Java 8/11, Kafka, NoSQL, MySQL, DB2, and Maven to support enterprise banking workflows.
- Designed and implemented RESTful web services and JSON-based APIs to improve integration speed and maintainability.
- Worked on HTML5, CSS3, JavaScript, AJAX, and XML applications in Linux and Apache environments for robust enterprise UI.
- Created UML diagrams including Use Case, Class, Sequence, and Object Diagrams to model detailed system design and business processes.
- Integrated CI/CD pipelines with Jenkins, Maven, Git, Chef, and automated build/deployment scripts using Python and shell scripting.
- Configured Nginx as a reverse proxy and load balancer to improve reliability, scalability, and performance of banking applications.
- Applied functional programming and reactive frameworks in Java to develop async streaming processors and improve backend responsiveness.
- Developed and maintained Spring Web Flow and MVC-based validation frameworks for business logic and transaction processing.
- Designed and implemented RFP microservices using Spring Boot and Spring MVC, providing secure and scalable REST APIs.
- Utilized AWS CloudFormation for automated deployment, high availability, fault tolerance, and auto-scaling of cloud applications.
- Managed version control and collaboration using Git, Bitbucket, and Jira for bug tracking, workflow management, and agile delivery.
- Developed unit and integration test cases using JUnit, ensuring high-quality and regression-proof enterprise applications.
- Mentored junior developers on Java, Angular, microservices, and best practices while collaborating with global stakeholders for requirement gathering.
- Implemented continuous delivery pipelines in Kubernetes environments, automating build, test, and deployment processes.
- Followed Agile methodology (Scrum) for client requirement analysis, design, development, and testing, ensuring iterative delivery of high-quality banking solutions.

Client: Voya Financial – Minneapolis, MN

Feb 2020 – Nov2022

Role: Full Stack Developer

Responsibilities:

- Developed highly responsive Angular, HTML5, and CSS front-end modules for insurance claim management systems, consuming RESTful APIs from a Spring Boot and Java/J2EE 11 backend to ensure seamless policyholder and agent interactions.
- Participated in the complete SDLC, leveraging object-oriented programming to build solutions tailored to insurance workflows such as claims processing, underwriting, and policy renewals, while incorporating continuous client feedback.
- Designed and implemented insurance policy applications using the Spring MVC framework, setting up Spring-Hibernate projects from scratch to support business-critical functions.
- Engineered microservices using Spring Boot, Java 8, Kafka, and NoSQL to handle high-volume insurance transactions, such as claim submissions and premium calculations, ensuring scalability and reliability.
- Designed and developed RESTful APIs with Spring MVC and JSON for claims, customer data, and policy management, enabling faster development and integration across insurance platforms.
- Built and deployed user interfaces with React.js, Node.js, and Angular for self-service insurance portals, enhancing customer experience for tasks like filing claims and checking policy details.
- Refactored legacy insurance applications to Java 12, applying functional programming features like Streams and Lambdas to improve efficiency and maintainability.
- Utilized Unix scripting and input/output stream redirection for automated data feeds related to claims processing and compliance reporting.

- Deployed and configured infrastructure for insurance applications using Terraform and Ansible, ensuring secure and efficient operations in hybrid environments.
- Automated system configuration with shell scripting to streamline the deployment of insurance applications across multiple environments.
- Contributed to system design, planning, and implementation for policy administration modules using Spring Boot, Spring Data, and Oracle in an Agile environment.
- Designed and optimized SQL queries, stored procedures, and triggers for claims adjudication and premium billing processes, ensuring accuracy and performance.
- Implemented API-first design for insurance services using OpenAPI and Swagger, improving reusability and integration with partner ecosystems.
- Developed CI/CD pipelines with Jenkins and Kubernetes to automate insurance application deployments, reducing downtime and improving delivery speed.
- Integrated insurance applications with AWS services such as S3, EC2, and DynamoDB for secure storage of policy documents and scalable compute for actuarial processing.
- Leveraged NoSQL databases such as Couchbase and DB2 for flexible management of customer and policy data, supporting high-volume insurance operations.
- Utilized Spring Cloud to build resilient microservices for insurance platforms, including claims, underwriting, and customer engagement services.
- Extensively used JPA and Hibernate for persistence, optimizing database interactions for insurance product catalogs and claims history.
- Designed SOAP and REST services for third-party insurance integrations, tested with SOAPUI, and deployed on JBoss for production use.
- Implemented TDD with JUnit and Mockito, creating robust test cases for claims rules, fraud detection, and underwriting logic.
- Automated functional and regression testing with Selenium and SOAP UI to validate customer self-service portals and policy management systems.
- Built and managed insurance data workflows with Maven for automated builds, GitHub Actions for CI/CD, and Kubernetes/OpenShift for containerized deployments.
- Applied Agile/Scrum methodology to deliver incremental features for claims automation, policy renewals, and risk assessment modules.
- Collaborated with cross-functional teams, including business analysts and underwriters, to streamline insurance workflows and deliver client-specific solutions.
- Consumed SOAP and REST services to integrate insurance data from external reinsurers and third-party providers.
- Designed and developed React.js workflows with Redux for real-time updates on claims status, enhancing policyholder transparency.
- Implemented MongoDB concepts such as indexing, replication, and transactions to support scalable insurance data storage and retrieval.
- Configured SonarQube, TeamCity, Bitbucket, and Artifactory for quality code delivery and continuous monitoring of insurance applications.
- Troubleshoot and optimized insurance application performance on Unix environments, ensuring high availability for critical claim adjudication systems.

Client: Allscripts, Chicago IL

Mar 2018 – Jan 2020

Role: J2EE/Java Developer

Responsibilities:

- Developed Single Page Applications (SPA) for healthcare portals following Agile Scrum, actively participating in daily standups, sprint reviews, and backlog grooming using JIRA for project tracking.
- Designed and developed responsive user interaction screens for patient and provider portals using HTML5, CSS3, JavaScript, jQuery, AJAX, and JSON, ensuring accessibility and usability.
- Architected and implemented a layered Java 8, J2EE backend using EJBs, JPA entity models, and SQL Server to ensure accurate and secure handling of healthcare data with Angular/TypeScript-based front-end.
- Implemented robust transaction management, optimistic locking, and audit logging to maintain HIPAA compliance and ensure integrity of patient records and claims data.
- Built RESTful services with Spring Boot to support real-time communication between microservices and front-end modules in claims processing and patient engagement applications.
- Designed SOAP-based web services to integrate legacy healthcare systems (EHR/EMR) with modern applications, ensuring interoperability and extended functionality.
- Leveraged AWS EC2 for scalable healthcare application hosting, S3 for secure storage of patient documents, and RDS for high-availability relational database management.

- Used ReactJS to build dynamic user interfaces for patient dashboards, improving readability, maintainability, and performance for complex healthcare workflows.
- Applied Spring IOC, AOP, and Spring MVC with Hibernate/Struts integration for healthcare applications, enabling modular, secure, and efficient codebases.
- Developed UI automation and backend test scripts using Selenium and Cucumber to validate critical healthcare workflows like appointment booking and claims adjudication.
- Implemented screen validations, secure data flow, and backend API integrations to ensure accuracy and compliance in healthcare forms and transactions.
- Built reusable TypeScript components and services in Angular to consume REST APIs for claims, eligibility, and patient data management.
- Developed applications to process JSON and XML from RESTful services using jQuery and AngularJS, supporting patient record queries and clinical data retrieval.
- Created reusable Angular TypeScript components for EHR modules, streamlining development and ensuring consistency across healthcare applications.
- Implemented Template-driven and Reactive Forms for capturing patient information with both server- and client-side validations to ensure data accuracy.
- Performed unit and integration testing of healthcare modules using JUnit and Mockito to ensure reliability and compliance with regulatory standards.
- Created and maintained Maven scripts and builds for healthcare application deployments, integrating them with Jenkins for CI/CD pipelines.
- Utilized Eclipse SWT for healthcare test case execution and validation in a structured testing environment.
- Managed source control using Git and implemented centralized logging with Log4j2 for audit and error tracking in compliance with healthcare regulations.
- Established CI/CD pipelines with Jenkins to automate build, test, and deployment processes for healthcare applications, reducing release cycle times.
- Implemented microservices-based healthcare cloud architecture on AWS, enabling modular deployment of patient, claims, and billing services.
- Containerized healthcare microservices using Docker, creating reusable images and collaborating with DevOps teams to streamline deployments in a secure environment.

EDUCATION:

- Master's in Information Technology and Management, The University of North Texas at Dallas
