PROFESSIONAL SUMMARY

Experienced **Full Stack Engineer** with around **5 years** of expertise in building scalable applications using **Java, Spring Boot, React, and Angular**. Skilled in developing **microservices, REST APIs**, leveraging **AWS and Azure** to deliver high-performance backend solutions. Proven ability to work across the full application stack, with a focus on **cloud infrastructure, CI/CD automation**, and **security best practices**. Collaborative team player with a strong passion for delivering robust, user-focused software in **Agile environments**. Eager to contribute my technical expertise, problem-solving skills, and a growth mindset to innovative software engineering teams.

TECHNICAL SKILLS

Programming Languages	Java 8, 11, 17, Java Streams, Python.
Architecture	Microservices, RESTful web services, REST API's.
Web Development	HTML, CSS, JavaScript, Bootstrap, React, Angular, NodeJS, Express.
Spring Ecosystem	Spring MVC, Spring Boot, Spring Data JPA, Spring AOP, Hibernate.
API Tools	Postman, Swagger UI.
Cloud Services	AWS, Azure, AKS, EKS, EC2, S3, DynamoDB.
Databases	MySQL, RDBMS, MongoDB, Oracle.
Build Tools	Maven, Gradle.
Web/Application Servers	Tomcat, JBoss, WebSphere.
Version Control & CI/CD	Git, GitHub, Jira, Jenkins, Argo, Docker.
Unit Testing	JUnit, TestNG.
Logging Tools for Java	Log4j, SLF4J.
Security & Authentication	OAuth 2.0, JWT (JSON Web Tokens), Spring Security.
Operating Systems	Windows, Linux.
IDEs	IntelliJ IDEA, Eclipse, Visual Studio Code.

PROFESSIONAL EXPERIENCE

Full Stack Engineer - Java | BNSF Railway, Texas

Jan 2024 – present

- Designed and developed full-stack solutions, integrating front-end (**React**) with back-end (**Java, Spring Boot**) services to streamline the provisioning and de-provisioning of cloud resources across AWS and Azure.
- Led the creation of scalable **REST APIs** for microservices in a distributed architecture deployed on **AKS/EKS**, enabling seamless communication between front-end and back-end systems and improving system response times by 25%.
- Delivered **end-to-end** application lifecycle, from designing an intuitive UI using **React** to implementing secure back-end services with **Spring Boot**, ensuring seamless data flow and smooth user interactions.
- Integrated **ServiceNow and GitHub Webhooks** to automate environment-specific deployments, controlling approval processes for dev, non-prod, and prod environments, ensuring consistent and reliable deployments.
- Engineered a **DynamoDB-backed metadata service** to decouple back-end services, enhancing data availability and reducing inter-service dependencies by 40%, improving both user experience and system performance.
- Boosted **system performance** by 25% by optimizing microservices and **reducing latency**.
- Automated front-end and back-end workflows using **Terraform in Argo CI/CD**, optimizing resource management, and reducing manual intervention by 70% in cloud deployments.
- Contributed to building full-stack automation workflows to handle **domain entry and certification creation**, using **Ansible** playbooks while improving overall cloud resource management and reducing deployment time.
- Collaborated with **front-end developers** to integrate user-friendly web interfaces with backend services, ensuring optimal performance and responsiveness in cloud-native applications.

Software Engineer | Texas Capital Bank, Texas

June 2023 - Jan 2024

- Developed backend services for digital banking applications using **Java and Spring Boot**, supporting secure transaction processing and real-time account updates for commercial clients.
- Designed and optimized **RESTful APIs** for integrating payment gateways with Texas Capital Bank's internal systems, enhancing transaction efficiency and reducing processing times by 20%.
- Enhanced user interfaces** for digital banking applications using **Angular**, providing an intuitive and responsive experience for customers accessing account data and transaction information.
- Integrated front-end with backend services** through Angular **HTTP Client** to consume RESTful APIs, ensuring smooth data flow for customer transactions and real-time updates.
- Implemented cloud-based solutions using **AWS** (EC2, RDS, S3) to deploy scalable backend applications, ensuring high availability for mission-critical financial services.
- Worked on the security layer of the banking platform, integrating **OAuth 2.0 and JWT authentication** mechanisms to ensure secure and compliant access to customer data.
- Collaborated with cross-functional teams to automate CI/CD pipelines using **Jenkins and Docker**, improving deployment frequency and reducing errors in production environments by 25%.
- Contributed to the development of **fraud detection algorithms** that analyze transactional data in real time to flag suspicious activities, increasing fraud prevention rates by 15%.

Backend Developer | Cognizant Technology Solutions, India

Feb 2021 - Jan 2022

- Involved in designing and implementing scalable microservices using **Java, Spring Boot, and Hibernate**, enhancing system modularity and maintainability.
- Developed robust **REST APIs** to facilitate seamless communication between distributed systems, ensuring high availability and performance.
- Utilized **SQL** and **Oracle** to design and optimize complex queries, improving data retrieval times and system efficiency.
- Involved in adopting **Docker** for containerization and deploying applications on **AWS** using EKS, EC2, streamlining deployment processes, and reducing downtime.
- Established and maintained **CI/CD** pipelines using **Jenkins**, automating testing and deployment processes to accelerate release cycles.
- Collaborated with front-end teams to **integrate** user-facing features, improving **user experience** and reducing page load time by **15%**.
- Used **Swagger-UI** extensively for API testing and documentation, accelerating QA feedback cycles and enabling easy integration with partner services.
- Actively participated in **Agile** ceremonies, including sprint planning and retrospectives, collaborating closely with cross-functional teams to meet project milestones.
- Guided interns, conducting **code reviews** to ensure adherence to coding standards and best practices.

Software Developer | United India Insurance Company, India

Jan 2020 - Feb 2021

- Developed core **backend modules** for policy management and claims processing systems using Java, Spring Boot, and RESTful APIs, reducing manual intervention by 40%.
- Designed and implemented **microservices architecture** for internal insurance modules, enabling faster deployments and greater scalability using Spring Cloud, Spring Data JPA, and Hibernate.
- Integrated **OAuth 2.0** and **JWT-based authentication** into customer login flows via Spring Security, ensuring secure access to policyholder data across web portals.
- Contributed to front-end features using **JavaScript, Bootstrap, and Angular**, improving form submission flows and increasing usability scores by 25%.
- Collaborated with front-end teams to improve **form submission workflows** and **UI responsiveness**, contributing to a **25% increase in usability scores**.
- Used **Postman** extensively for API testing and documentation, accelerating QA feedback cycles and enabling easy integration with partner services.
- Wrote unit and integration tests using **Junit**, achieving 85% test coverage across critical modules.
- Maintained and built applications using **Maven**, managed version control with **Git/GitHub**, and tracked sprint progress via **JIRA** under **Agile** methodology.
- Worked with **Oracle and MySQL** databases, writing optimized SQL queries and managing schema versions for enterprise-grade data consistency.

PROJECTS

Personal Finance Tracker

- Developed a full-stack financial planning application using **Spring Boot** for the backend and **HTML/CSS** for the front end, ensuring a responsive and intuitive user experience.
- Integrated **JWT-based authentication** to implement secure user login and registration, protecting sensitive financial data and ensuring privacy.
- Optimized data retrieval performance by implementing efficient **database queries** and indexing strategies, enhancing the user experience with faster data load times.
- Delivered real-time financial data visualization through interactive charts and graphs using **Chart.js**, allowing users to track and understand their spending patterns easily.
- Implemented **PDF and CSV** export features, enabling users to export and analyze their financial insights offline, enhancing the utility and convenience of the app.

Dance Step Recognition

- Created a comprehensive **dataset** by collecting thousands of images from multiple angles for each Bharatanatyam dance step, ensuring a diverse and rich training dataset for the model.
- Developed a **machine learning model** using supervised and unsupervised learning techniques to classify dance steps, experimenting with different algorithms to optimize accuracy.
- Built an **image-processing pipeline** to handle multi-angle images, ensuring data integrity and pre-processing before feeding the dataset into the model.
- Developed a **GUI** that allowed users to upload images and visualize dance step recognition results, enhancing usability and interaction with the AI model.
- Showcased problem-solving and machine learning skills by applying **AI techniques** to a real-world cultural dataset, achieving significant model performance and insights.

CERTIFICATION

- AWS Certified Developer – Associate**, Amazon Web Services

EDUCATION

University of Texas at Arlington, Texas, USA
Master of Science in Computer Science - GPA: 3.75/4.0

Dec 2021 – May 2023
