Nayab Shoaib

LINUX SYSTEM ENGINEER
RHCSA

SUMMARY

Energetic professional with a passion of learning cutting edge technologies, Red Hat Certified System Administrator (RHCSA) offering 7 years of experience managing Linux based servers, supporting a mission-critical environment on testing and production servers. Experience in maintenance of servers, user management, package management, troubleshooting, networking, storage, security, handling tickets and incidents, perform patching, decommissioning and managing performance to ensure stability. Proficient in automation with Ansible, working with GIT for version control and exposed to several key services of AWS such as EC2, IAM, S3, EBS, VPC, Cloud Watch, Route 53, and Cloud Formation templates. Exposure of container-based deployments using Docker and familiar with Kubernetes. Strong problem-solving, analytical, fault diagnosis, communication, interpersonal and teamwork skills. Currently looking to be an asset to more of an automated environment.

TECHNICAL SKILLS

Operating Systems	RHEL 6, 7, 8, 9 CentOS 6, 7, 8
Storage	SAN NFS Logical Volume Management (LVM) RAID S3 Glacier EBS
DevOps Tools	Ansible Docker Terraform AWS Kubernetes Git
Version Control	Git GitHub GitLab
Monitoring Tool	Nagios
Amazon Web Service	IAM EC2 S3 EBS EFS VPC ELB Auto-scaling Cloud Watch
Automation	Ansible Bash Scripting PXE with Kickstart AWX
User Management	Active Directory LDAP
Software Management	YUM RPM DNF APT
Servers	PXE DHCP Apache DNS SAMBA NFS FTP EC2
Virtualization	VMware ESXi Vsphere Vcenter VMotion Snapshot Clone

CERTIFICATIONS

Red Hat Certified System Administrator (RHSCA) – [January 2025]

PROFFESIONAL EXPERIENCE

Linux System Engineer

JPMorgan Chase – Houston, TX

| 08/2021 - Present

- Expertise in deploying and managing Red Hat Enterprise Linux/CentOS builds through Ansible and using template for VMs in vCenter.
- Actively monitored Red Hat Satellite for security advisories and promptly applied patches, effectively mitigating potential vulnerabilities and ensuring the continuous protection of critical systems.
- Proficient in managing virtualization environments using VMWare ESXi and vSphere on RHEL servers, ensuring efficient utilization of resources and seamless deployment of virtual machines.
- Expertise in managing logical volume-based servers, proficiency in tasks such as creating and extending volumes using LVM. Well-versed in file system management, encompassing tasks like creation, extension, and conducting comprehensive file system sanity checks.
- Utilizing Ansible automation engine for executing core Linux operations such as security patching and application deployment, enhancing operational efficiency.
- Using Ansible playbooks to automate day to day task using service, gather facts, copy, conditions, handlers, notify, and various other modules and Ad hoc commands.
- Proactively conducted daily system maintenance tasks and monitoring activities for both physical servers and Linux-based private cloud infrastructure.
- Familiar with managing applications and web servers in QA environments, leveraging Docker for containerization and utilizing Kubernetes to orchestrate container applications across a cluster of hosts.
- Proficient in maintaining and managing user accounts in Active Directory (AD), leveraging LDAP protocol for centralized user authentication and access control.
- Expertise in overseeing Linux clusters, optimizing processing speed, storage capacity, performance, redundancy, high-availability, load balancing, and scalability for improved system efficiency.
- Spinning Amazon EC2 instances and working closely with infrastructure teams to troubleshoot complex issues.
- Implemented security measures in AWS by configuring IAM roles, security groups, and access policies to ensure restricted user access and enhanced security.
- Utilizing AWS Cloud Watch for continuous monitoring of EC2 instances and AWS resources (CPU, HD, Load on system) to manage infrastructure integrity.
- Expertise in diagnosing and resolving intricate technical problems, ensuring prompt and effective solutions for customer satisfaction.

Linux Administrator

AT&T – San Jose, CA

| 07/2018 - 07/2021

- Managed Installation, configuration and maintenance of DHCP, NFS, and web servers (Apache).
- Expert in setting up, configuring and deployment of VMware-based systems for high-availability and performance, including VCenter, VSphere, and ESXi host and clones and templates.
- Experience of installation and configuration of Red hat Enterprise Linux 6 and 7 and Centos 6 & 7, with PXEBOOT and Kickstart.
- Network administration skills includes NIC Teaming in RHEL 6.x and RHEL 7.x using nmcli.
- Managed, installed, and, upgrading software packages using YUM and RPM and creating YUM repository files for offline servers.
- Experience using Git to source files and projects Created Cronjobs to perform system backups and to automate other administrative tasks
- Responsible for patching, and decommission the servers, Disaster & Recovery Management and Change Management.
- Experienced with Ansible playbooks for virtual and physical instance provisioning, configuration management, patching and software deployment.

- Troubleshoot memory related issue of creation swap, addition of swap space and make it boot persistent.
- Examine system Log Files of all system report
- Monitored the performance of the system using top, sar, vmstat, netstat and iostat to check the CPU utilization, bottlenecks of I/O devices, memory usage and network traffic.
- Disk and File system management through Standard Partitions and using Logical Volume Management.
- Installed and configured RAID levels 0,1,5,6, and 10
- Managed User Accounts and Groups and managing their permissions, manually adding users, granting sudo permissions as required Ensured password less SSH access by generating SSH key pair.
- Used Nagios as IT infrastructure monitoring tool for effective monitoring host resources such as processor load, disk usage, system logs, monitoring applications, services, and network protocols, Automated monitoring tasks with bash scripting.
- Performed scheduled system backups, monitored system logs, performance monitoring and capacity planning in anticipation of system resource usage and needs.

Linux Analyst

YAHOO INC – Sunnyvale, CA

| 07/2017 - 06/2018

- Troubleshooting network related, SSH issues.
- Installed packages on Linux Servers by using YUM & RPM packages.
- Management of Linux user accounts, groups, directories and file permissions.
- Linux hardware support, problem and change ticket implementations.
- Configured Secured Shell (SSH) Linux servers.
- Automated routine jobs by running Cronjobs.
- Performance analysis using tools such as top, iostat, vmstat, sar, mpstat, etc.
- Provided 24/7 on call support on Production Servers.
- Monitoring systems using custom monitoring tools and responding to incidents.

EDUCATION

Bachelor's Degree - Lahore – Pakistan, 2017

COURSES AND TRAINING

Courses and training attended at CORVIT – Gulberg Lahore

1. CCNA Cisco Certified Network Associate (CCNA)
2. Linux Training
 - RHCSA – Red Hat Certified System Administrator
 - RHCE – Red Hat Certified Engineer
