

NAZARII BARANETSKYI

Jersey, NJ

nazarbaranetskii@gmail.com, 347-873-5773, <https://www.linkedin.com/in/n-baranetskyi>

PROFILE

Backend Software Engineer with 8+ years of experience building scalable backend systems, distributed APIs, and automation pipelines. Specialized in Python backend development, CI/CD engineering, and integrating AI/LLM models into production systems. Strong background in FastAPI, Django, AWS, PostgreSQL, and event-driven architecture. Proven track record delivering high-availability services, optimizing deployments, and accelerating engineering workflows through automation and AI-powered capabilities.

SKILLS

Languages & Frameworks: Python, FastAPI, Django, Flask, Node.js, Java, REST, GraphQL, WebSockets

AI / ML Tools: OpenAI API, TensorFlow, scikit-learn, LangChain

Databases: PostgreSQL, MySQL, DynamoDB, Redis

Cloud & DevOps: AWS (S3, EC2, Lambda), Docker, GitHub Actions, GCP

Other: REST, GraphQL, Pandas, NumPy, Bash, Linux, Vibe Coding (Cursor, Claude)

EXPERIENCE

McKinsey & Company

Senior Software Engineer

Nov 2021 –

- Designed and built backend FastAPI services powering analytics, automation, and AI-driven applications.
- Integrated LLM and ML models (OpenAI, embeddings, TensorFlow) into production workflows—delivering intelligent search, summarization, and automation features.
- Architected event-driven data pipelines using AWS (S3, DynamoDB, Lambda) with strong focus on reliability and observability.
- Led the design and rollout of a company-wide CI/CD pipeline using GitHub Actions, automating testing, container builds, security checks, and deployments.
- Containerized services with Docker, improving deployment consistency and reducing release cycles by 30%.
- Implemented API gateway routing, authentication, and monitoring for high-availability multi-region services.
- Collaborated with cross-functional teams to convert workflows into backend APIs and AI-powered tools.

Redtag | Team Lead

Senior Software Engineer

Oct 2017 – Nov 2021

- Led development of scalable Python/Django backend systems, batch automation tools, and internal services.
- Built REST APIs and backend modules supporting BI dashboards, reporting systems, and data-driven workflows.
- Implemented data processing and ETL automation using Python scripts for JSON/HTML parsing, external API ingestion, and bulk transformations.
- Applied TDD/BDD principles to maintain code reliability and accelerate continuous delivery.
- Managed PostgreSQL/MySQL schemas, query optimization, migration automation, and performance tuning.
- Oversaw CI/CD pipelines (Jenkins + Docker) ensuring stable deployments and staging/production parity.
- Mentored developers and led architecture discussions for backend modernization and microservice migration.

Cerera Technologies

Python Developer

Apr 2017– Oct 2018

- Built backend services and desktop automation tools integrating AI/ML algorithms for forecasting, scoring, and risk decisioning.
- Developed Python/Kivy desktop applications for syncing retail devices, POS systems, and fiscal terminals.
- Automated SOAP API communication and hardware-device interactions using Python scripts and custom protocols.
- Improved data reliability through automated reconciliation, error logging, and background sync processes.

EDUCATION

Lviv Polytechnic National University

Ukraine

M.S. in Computer Science

2017
