Summary

- Overall 6+ years of experience as a Data Engineer and proficient in designing, documenting, development, and implementation of data models for enterprise - level applications. Background in Data Lake, Data Warehousing, ETL Data pipeline & Data Visualization. Proficient in Big data storage, processing, analysis, and reporting on all major Cloud vendors-AWS, Azure. Expertise in designing data-intensive applications using **Snowflake**, Cloud Data engineering, **Data Warehouse /Data Mart**, Data Visualization, Reporting, and Data Quality solutions.
- Experience and understanding of architecting, designing and operationalization of large-scale data and analytics solutions on **snowflake Cloud Data Warehouse**.
- In depth experience in **Google platform cloud (GCP)** which includes managing big queries in database migration services.
- Hands on in optimize data warehouse performance on Snowflake and BigQuery, reducing query run times and improving resource utilization through techniques such as partitioning, clustering, and cost optimization.
- Strong knowledge in DW Concepts, **Dimensional Modeling**, **SCD2**, Data modeling, ETL/ELT, Data, and Information Management.
- Experience of Partitions, bucketing concepts of External tables in to optimize performance with different file formats like Avro, parquet, ORC, JSON, and XML.
- Expertise in **Data Build Tool(DBT)** for data transformation, CDC (Change Data Capture) for real-time data synchronization, and integrating legacy systems like IBM DB2 and IBM Sailfish into modern cloud environments.
- Hands - on experience in Azure Cloud Services (PaaS & IaaS), Azure Synapse Analytics, SQL Azure, Data Factory, Azure Analysis services, Application Insights, Azure Monitoring, Key Vault, Azure Data Lake.
- Designed and developed logical and physical data models that utilize concept such as **Star Schema**, **Snowflake Schema** and Slowly Changing Dimensions.
- Strong understanding of snowflake roles and deployments of virtual warehouses snowflake connectivity, Virtual Warehouses, Resource Monitoring and in designing and creating RDBMS Tables, Views, User Created Data Types, Indexes, Stored Procedures, Cursors, Triggers, and Transactions.
- Experience in creating DBT from scratch and executed the **DBT scripts** for smooth deployment from GIT and DBT schedules to integrate with snowflake.
- Expertise with **SnowSQL**, advanced concepts (query performance tuning, time travel, deep understanding of Snowflake system tables such as metadata and history tables etc.)
- and features/tools (data sharing, events, SnowPipe etc.)
- Experienced in **Data Modeling & Data Analysis** experience using Dimensional Data Modeling and Relational Data Modeling, Star Schema/Snowflake Modeling, FACT & Dimensions tables, Physical & Logical Data Modeling.
- Expertise in **Python data extraction and data manipulation**, and widely used python libraries like NumPy, Pandas, and Matplotlib for data analysis.
- Experience in integrating and migrating legacy systems such as IBM Sailfish into cloud environments, facilitating seamless data movement while maintaining operational continuity.
- Responsible for writing Unit Tests and deploy production level code through the help of **Git version control**.
- Designed and implemented **data processing pipelines** on Google Cloud Platform (GCP) using services such as Google Cloud Dataflow, Google BigQuery, and Google Cloud Storage.
- Involved in all phases of **ETL life cycle** from scope analysis, design, and build through production support.

- Actively involved in each phase of **Software Development life cycle (SDLC)** and experience in **Agile Software Methodology**.

Technical Skills

Data Warehouse	Snowflake, Google Cloud Storage, Snowflake, Teradata, Azure Synapse
Programming Languages	Python, SQL, C
Database	SQL Server, MySQL, PostgreSQL
Devops tools	Git, CI/CD, Jira
Cloud Technologies	GCP, Amazon AWS, EC2, EC3, MS Azure, Azure SQL Database, Azure SQL Data Warehouse, Azure Analysis Services, Azure Data Lake, Data Factory
Reporting Tools	Powerbi, MS Excel, Tableau, SSIS
Hadoop Distribution	Cloudera, Hortonworks, MapR, AWS EMR, Azure HDInsight, GCP DataProc
ETL Tools	DBT, Big Query, Azure Data Factory, Airflow, Apache Kafka, Spark Streaming
Operating Systems	Linux, Unix, Windows 10/8/7

Experience

PROFESSIONAL EXPERIENCE

Stanley Black & Decker – Irving, Texas

Snowflake Data Engineer

May 2023 – Present

Environment: PostgreSQL, Snowflake, DBT, Amazon Web Services (AWS), Data Warehousing, ETL, Qlik

- Ingest large amounts of raw data (from various Tools data of SBD) from different data sources like oracle, AWS S3 to Snowflake Data Warehouse using ingestion tools like Qlik.
- Created DBT from scratch and executed the DBT scripts for smooth deployment from GIT and DBT schedules to integrate with snowflake.
- Performed Data mapping between source systems to Target systems, logical data modeling, created class diagrams and ER diagrams and used SQL queries to filter data.
- Implemented best practices for schema design and data transformations to enhance query performance.
- Facilitated a separate DataMart design for Collections in Snowflake, for Analytical Requirements and scalability, thus optimizing performance by 30%, extracting data from disparate sources like MongoDB, and transforming using dbt.
- Created 30+ models in DBT by connecting to snowflake and created jobs to process data.
- Worked on ETL Processing which consists of data transformation, data sourcing and mapping, Conversion, and loading.
- Worked extensively on Data Warehouse involved in creating objects, transformations, and data sampling.
- Implemented full load and CDC load of data using Qlik whenever necessary.
- Created DBT packages files and run books reports at every stage level.
- Executed complex data transformations using dbt to support business intelligence and reporting requirements.
- Ensured data quality and integrity through rigorous testing of dbt models and pipelines. Improved Marketing ELT: Extracted weekly Salesforce data, warehoused in Snowflake, designed materialized

views, demoralized tables, and added calculated columns using dbt, cutting down performance overhead at the BI layer by 15%

- Utilized version control systems (e.g., Git) to manage dbt projects, enabling efficient collaboration and tracking changes over time.
- Implemented optimization techniques in dbt to enhance query performance and reduce processing times for data transformations.
- Diagnosed and resolved issues within dbt models, ensuring data accuracy and reliability in analytical outputs.

Visa – Dallas, Texas

Azure Data Engineer

Mar 2022 – Jun 2023

Environment: Python, Spark, PySpark, Apache Kafka, Azure Databricks, Tableau, Azure Blob Storage, Azure Data Factory, T-SQL, Azure Data Lake Gen2, Pandas, SQL, Azure SQL DW, Snowflake.

- Extracted, Transformed and Loaded data from Sources Systems to Azure Data Storage services using a combination of Azure Data Factory, Spark SQL, Azure Data Lake Analytics.
- Data is Ingested to one or more Azure Services- (Azure Data Lake, Azure Storage, Azure SQL, Azure DW) and processing the data in Azure Databricks.
- Worked on Azure Services like IaaS, PaaS and worked on storage like Blob (Page and Block), SQL Azure.
- Implemented OLAP multi-dimensional functionality using Azure SQL Data Warehouse.
- Worked on Cloud databases such as Azure SQL Database, SQL managed instance, SQL Elastic pool on Azure, and SQL server.
- Designing and implementing performance data ingestion pipelines from multiple sources using Apache Spark and/or Azure Databricks.
- Utilized Pandas for efficient data manipulation, transforming complex datasets into clean, structured formats for analysis in Databricks.
- Created continuous integration and continuous delivery (CI/CD) pipeline on AZURE that helps to automate steps in the software delivery process.
- Data ingestion to one or more Azure services (Azure Data Lake, Azure Storage, AZURE SQL, Azure synapse) and processing the data in Azure Databricks.
- Handled importing of data from various data sources, performed transformations using Hive, and loaded data into HDFS.
- Developed PySpark pipelines which transforms the raw data from several formats to parquet files for consumption by downstream systems.
- Developed ETL solutions using Spark SQL in Azure Databricks for data extraction, transformation and aggregation from multiple file formats and data sources for analyzing & transforming the data to uncover insights into the customer usage patterns.
- Developed and implemented data cleaning pipelines using Pandas, reducing data inconsistencies by 25% prior to ingestion into Databricks.
- Created dashboards in Tableau that were published to the internal team for review and further data analysis and customization using filters and actions.
- Develop Reports and Dashboards in Splunk. Utilized Splunk Machine Learning Toolkit for modeling Clustering model to detection log.
- Extract Transform and Load data from Sources Systems to Azure Data Storage services using a combination of Azure Data Factory, T-SQL, Spark SQL, and U-SQL Azure Data Lake Analytics.

RiverRock Software Solutions Pvt Ltd, India
ETL Developer | MS Project Pros - Lundin Mining

Apr 2019 – Jun 2021

Environment: AWS, Redshift, Python, S3, ETL, Excel, QlikView

- Worked on Extracting data from API and ERP systems and Created table structures for the Salesforce objects in Redshift.
- Designed and implemented data transformation logic to standardize and clean data, handle missing or inconsistent data, and ensure data quality.
- Applied various transformation techniques, such as aggregation, filtering, lookup, and joins to meet the business requirements.
- Designed and implemented ETL processes for data extraction, transformation, and loading from various data sources
- Worked on Data Migration Task to migrate existing data and replicate on-going changes to migrated data from SQL server to Redshift.
- Load data from API and Salesforce sources to AWS S3 through QlikView and then loaded to Redshift using COPY command.
- Worked with BI tools like Tableau, Power BI, or Looker to ensure data was properly transformed and loaded into data warehouses for reporting and analytics.
- Developed data pipelines to automate the extraction and transformation of large datasets, ensuring efficiency and data quality.

RiverRock Software Solutions Pvt Ltd, India

ETL Developer (Intern)

Oct 2018 – Mar 2019

- Worked on the ETL pipelines using Azure Data Factory (ADF) to extract, transform, and load data from various Azure sources, including Azure SQL Database and Azure Blob Storage.
- Based on the client requirements built new stored procedures which will results in data optimization.
- Worked on validating and cleaning the Azure Data Factory.
- Prepared the documents for each deployment changes and inter connected the flow of DB to reporting tool to generate the reports.
- Exposure to migrating data based on master data into fact/dimension and audit tables as per business requirement.
- Documented project workflows, transformations, and Power BI report configurations.
- Was part of unit testing, QA testing, and after development, in an agile scrum environment.

EDUCATION

MS in Computer Science - University of Alabama, Dec 2022

Bachelors in Computer Science – Pondicherry University, Aug 2019

CERTIFICATIONS

- ✦ **Snow Procore Certification** : <https://achieve.snowflake.com/d2e23821-0f08-43ed-8ae5c9359219de75#gs.ajx3rv>
- ✦ **Databricks Data Engineer Associate certified** : <https://credentials.databricks.com/5618c3e4-035f-42c1-aa46c333ccf5fa72#acc.Gq2D3pUY>
