

Deekshitha Dongala

Senior DevOps Engineer / Site Reliability Engineer

+1 (408)-758-1221 | deekshithadongala311@gmail.com | San Francisco Bay Area, CA | [Linkedln](#)

PROFESSIONAL SUMMARY

Dynamic DevOps and Cloud Engineer with 8 years of experience in designing, automating, and optimizing cloud-native solutions. Expertise in AWS, Azure, and GCP with a strong focus on scalability, automation, and security compliance. Proven ability to accelerate CI/CD processes, reduce deployment times, and enhance system reliability through Infrastructure as Code (Terraform, Ansible) and Kubernetes-based container orchestration. Adept at integrating monitoring, security, and governance frameworks, ensuring 66.66% uptime and seamless cloud operations. Passionate about driving cost-effective, high-performance DevOps solutions that align with business goals.

PROFESSIONAL QUALIFICATIONS

- **Cloud Architecture and Solutions Design:** Extensive experience in designing and implementing secure, scalable, and cost-effective cloud solutions.
- **DevOps and Automation Expertise:** Proficient in DevOps practices, including CI/CD processes, infrastructure.
- **Security and Compliance:** Skilled in implementing robust security measures, IAM best practices, and compliance standards, including multi-factor authentication, encryption, and preventive.
- **Configuration and Change Management:** Expertise in configuration management, patch management, and automated deployment.
- **Migration and Modernization:** Proven ability to manage complex migration projects, modernizing legacy systems and applications to AWS Cloud.
- **Technical Support and Customer Handling:** Excellent customer handling capabilities with a focus on providing hands-on technical support and resolving critical issues for mission-critical applications.
- **Project Management and Team Collaboration:** Adept at managing multiple client engagements, leading cross-functional teams to drive project success and customer satisfaction.
- **Communication and Documentation:** Strong communication, technical writing, and interpersonal skills, with the ability to create detailed documentation, change management policies, and technical reports.

PROFESSIONAL EXPERIENCE

Becton Dickinson, Milpitas, CA

Senior DevOps Engineer / Site Reliability Engineer

Oct 2023 - Present

- Migrated infrastructure from traditional VM-based environments to containerized deployments using Kubernetes, increasing scalability and resource efficiency by 40%.
- Automated CI/CD pipelines, reducing deployment time by 60% through the integration of custom resources, Terraform, and GitOps for infrastructure as code.
- Led the migration from on-premises JFrog Artifactory to JFrog SaaS, ensuring minimal downtime and seamless artifact management.
- Deployed Kubernetes clusters on Azure Kubernetes Service (AKS) using Terraform, optimizing environment provisioning for development, QA, staging, and production.
- Managed scale set VMs with Terraform scripts, dynamically scaling infrastructure to meet workload demands and reducing cloud resource costs by 30%.
- Developed Grafana dashboards with Prometheus and Azure Exporter, providing real-time insights into CI/CD performance, system metrics, and incident trends.
- Conducted Root Cause Analysis (RCA) for critical incidents, implementing proactive monitoring and alerting strategies that reduced system failures by 35%.
- Improved deployment monitoring by integrating Azure Monitor and Log Analytics, reducing MTTR (Mean Time to Repair) by 25%.
- Automated Kubernetes installation using Terraform templates, standardizing cluster configurations and reducing manual setup errors by 60%.
- Designed and executed training sessions on Docker containerization best practices, improving team proficiency and accelerating container adoption.
- Provided 24/7 on-call support, ensuring high availability and quick resolution of production incidents, reducing downtime impact by 50%.

Google, San Jose, CA

DevOps / Infrastructure Engineer

March 2023 - Oct 2023

- Engineered automated release pipelines for the TensorFlow project, reducing deployment time by 40% and ensuring seamless model releases.
- Integrated Kubernetes for container orchestration, achieving 66.6% availability and ensuring high-performance scaling for machine learning workloads.
- Developed and optimized CI/CD pipelines using Jenkins and Google Cloud Build, reducing model deployment downtime by 30% and accelerating time-to-production.

- Managed and automated the provisioning of Linux VMs using Terraform, defining reusable IaC templates to enforce standardized, scalable configurations.
- Built Python and TypeScript (Node.js) automation scripts to eliminate manual operational overhead, improving task execution speed by 50%.
- Implemented automated data backup and restore processes using shell scripts, reducing data recovery time from 6 hours to 30 minutes and enforcing backup retention policies.
- Designed and enforced CI/CD best practices, conducting code reviews and optimizing workflows, which resulted in a 20% increase in code quality scores.
- Enhanced monitoring by integrating Prometheus and Grafana, creating dashboards to visualize pipeline performance, system metrics, and real-time alerts.
- Automated model deployment testing processes, reducing manual intervention by 60% and ensuring consistent model accuracy verification before production rollout.
- Authored detailed documentation on pipeline configurations, release processes, and troubleshooting, expediting onboarding time for new engineers by 30%.

T-Mobile, San Jose, CA

DevOps/Release Engineer

Feb 2021 - March 2023

- Designed and deployed enterprise-level CI/CD pipelines, reducing software deployment cycles from weeks to hours, enabling continuous delivery for mission-critical applications.
- Implemented automated monitoring and logging using ELK Stack and Splunk, reducing alert resolution time by 60% and ensuring real-time anomaly detection.
- Developed Kubernetes Helm charts for containerized applications, reducing manual configurations and increasing deployment speed by 50%.
- Enhanced security automation by integrating IAM policies and role-based access control (RBAC), ensuring 100% compliance with security best practices.
- Created auto-healing infrastructure by integrating AWS Auto Scaling and Kubernetes self-healing capabilities, reducing unplanned downtime by 80%.
- Implemented disaster recovery strategies, ensuring 66.66% uptime and securing mission-critical workloads across multiple availability zones.
- Led a team in root cause analysis (RCA) for production incidents, reducing reoccurrence rates by 45% and optimizing issue resolution processes.
- Collaborated with developers to establish best practices for Git branching, leading to cleaner, conflict-free merges and 30% faster code integration cycles.

Cisco Systems, San Jose, CA

DevOps/Infrastructure Engineer

Aug 2018 - Jan 2021

- Designed and managed AWS/GCP multi-cloud environments, optimizing costs and improving resource utilization by 40% through auto-scaling.
- Developed Terraform modules and Ansible playbooks, automating server provisioning and configuration management, reducing manual intervention by 85%.
- Enhanced network security by integrating VPC peering, NACLs, and security groups, achieving zero security breaches in the production environment.
- Led Kubernetes-based infrastructure modernization, migrating 100+ services from legacy VMs to containers, reducing latency by 35%.
- Implemented Blue/Green and Canary deployments to reduce production risks, resulting in near-zero downtime deployments.
- Monitored system performance and resolved bottlenecks, using Prometheus and Grafana, improving application efficiency by 50%.
- Optimized disaster recovery processes, ensuring full business continuity by implementing daily automated backups with AWS S3 lifecycle policies.
- Standardized DevOps practices across teams, mentoring junior engineers and improving DevOps adoption by 60%.

Visa Inc, San Mateo, CA

Build and Release Engineer

Jan 2017 - Aug 2018

- Automated build and deployment pipelines using Jenkins, improving code deployment speed by 65%.
- Managed version control strategies for enterprise applications, ensuring consistent, conflict-free releases with Git.
- Designed scalable Kubernetes architectures, reducing operational complexity and improving deployment reliability.
- Integrated cloud monitoring tools, reducing system downtime by 30% and improving troubleshooting efficiency.
- Enhanced security compliance by automating security patching and vulnerability scanning, reducing security risks by 50%.
- Implemented a hybrid cloud strategy, transitioning on-prem applications to AWS while maintaining critical business functions.
- Created documentation and knowledge-sharing platforms, reducing onboarding time for new engineers by 40%.

SKILLS

- **Web and Application Servers, Version Control Systems:** Git | GitHub
- **Scripting Languages:** Bash | PowerShell
- **Cloud Automation Orchestration:** CloudFormation | Lambda | Terraform | Kubernetes
- **Configuration Management:** Ansible | Systems Manager | SCCM | Veeam
- **Migration and VMware:** DMS | SMS | DBMS | CloudEndure
- **AWS Core Services:** EC2 | IAM | VPC | S3 | EBS | ELB | Route 53 | CloudFront | RDS | WAF
- **Management and Auditing:** CloudWatch | CloudTrail | AWS Config | AWS Organization
- **Container Image:** Docker | Kubernetes
- **DevOps and Automation:** Terraform | CloudFormation | OpsWorks | Jenkins | Kubernetes | Docker | Git | Jenkins | CodePipeline
- **Security and Compliance:** IAM | MFA | KMS | AWS Shield | AWS Firewall Manager | Secrets Manager | Security Groups | NACLs
- **Configuration and Change Management:** Ansible | Puppet | Chef | AWS Systems Manager | RPM | YUM | SCCM | Automox
- **Technical Support and Customer Handling:** Jira | Confluence | Bitbucket | Opsgenie
- **Project Management and Team Collaboration:** Atlassian Suite | Slack | Trello | Microsoft Teams
- **Communication Tools:** Microsoft Office Suite | Google Workspace | SharePoint

EDUCATION

Master of Science in Computer Science2017

University of Central Missouri- Warrensburg, MO

CERTIFICATIONS

- AZ-400: Designing and Implementing Microsoft DevOps Solutions
- AWS Certified Developer - Associate
