EDUCATION	UCLA David Geffen School of Medicine M.S. Data Science in Biomedicine	<i>Expected, June, 2026</i>
	University of California, Los Angeles (UCLA) B.S. Computational and Systems Biology, Bioinformatics	<i>2017 - 2021</i>
SKILLS	Frontend Development: NextJS, Typescript, ReactJS, Tailwind CSS, Bootstrap, HTML Backend Development: Flask, RESTful APIs, Python (Pandas, NumPy, Matplotlib), C++ Database Management: PostgreSQL, MySQL, AWS S3, AWS Redshift Data Analytics / Tools: R/R Studio, Jupyter Notebook, Git, Microsoft Excel (VBA), Tableau Business Development: Agile methodologies, JIRA, Project Management, KPI Development	
DATA PROJECTS	Data Engineer, Full Stack Developer College-Search.app (Personal Project: College Search & Analytics Tool)	<i>Irvine, CA</i> <i>10/2024 - Present</i>
	- Developed and implemented full-stack web application with a Next.js frontend with TypeScript functionality, Flask API backend, and PostgreSQL database - Engineered Python/SQL ETL pipeline to streamline historical data, batch upload for all IPEDS college data, and utilize foreign keys / foreign servers for data integration - Integrated RESTful APIs to ensure seamless deployment on Fly.io and Vercel cloud platforms - Dockerized application for environment consistency, enhancing build/runtime performance - Designed dynamic website with Tailwind CSS, along with interactive data visualizations and filtering capabilities using chart.js to provide users with dynamic, data-driven insights	
EXPERIENCE	Assistant Technology Director & Chief College Counselor Masterprep Academy	<i>Irvine, CA</i> <i>01/2023 - 01/2025</i>
	- Built a relational database schema in Supabase, indexing test question entries by difficulty, categories, and subcategories, and integrating LaTeX within value tables - Led and managed team of 7 in developing a proprietary digital SAT-practice web-app in React, enabling team of curriculum developers to generate over 2000+ unique test questions - Redesigned company website on Wix, modifying layout for SEO, resulting in a 50% increase in Click-Through Rate from digital marketing campaigns - Revamped data collection processes, introducing weekly KPIs to track sales, marketing, regulatory, inventory, and operations across 5 campuses (Pasadena, Seattle, DC, Irvine, Yorba Linda)	
	ETL Backend Developer, Contracted For Rivian Automotive Quick Release Inc.	<i>Irvine, CA</i> <i>01/2022 - 04/2023</i>
	- Developed a Python-based backend to transform and ingest automotive part data from AWS S3 into AWS Redshift, improving ETL efficiency and data accessibility for data stakeholders - Revamped data filtering, standardized datatypes, and implemented value mapping for 1.5 million+ automotive parts from EBOM for 5 vehicle builds (R1T, R1S, R1SS, RPV, EDV) - Reduced ETL execution time by 75% by optimizing algorithms, improving Parquet data structures, and streamlining processing workflows - Collaborated with Rivian Engineering and Product Data Management teams to align ETL processes with business needs in order to ensure seamless data integration and reporting	
	Data Science Intern UCLA Ping Lab Cardiovascular Research	<i>Los Angeles, CA</i> <i>09/2020 - 07/2021</i>
	- Applied NLP pipeline (Tokenizer and Tensorflow) to parse COVID-19 research literature MeSH categories - Constructed relational knowledge graphs on Neo4J, mapping COVID-19 to related co-morbidities
