EXPERIENCE

ETL – SME (Subject Matter Expert)

Mastech Digital

12/2024 Newark, NJ

- Collaborate with business community and Solution Architects to provide consultation from application and technical point of view to aid them in preparing a realistic and implementable business case.
- Develop HLD (High Level Design)/ EPICs based on the requirement and prepares subtasks called LLD (Low Level Design)/User Stories for ease of implementation during development phase.
- Demonstrated strong understanding of data warehousing concepts, data modeling, and dimensional data modeling (Star Schema and Snowflake Schema).
- Created and implemented complex business intelligence solutions using Informatica PowerCenter as ETL tool and data warehouse models staged in Teradata and Oracle database.
- Leading the development activities and ensuring the BI (Business Intelligence) solution fulfills all the requirement specification.
- Designing and developing data warehouse solutions using Informatica PowerCenter 9.x/10.x as the ETL integration tool.
- Using complex and nested SQL queries to integrate data from all sorts of landing zone area, staging area and mart level data and present this data in much cleaner and simpler form to the downstream application for reporting and predictive analysis.
- Applying concepts of Shell scripting and Unix/Linux system-based file handling for the data sources coming as flat file/XML file/COBOL/VSAM at the ETL server for further ingestion and processing by the system and ultimately to the data warehouse system.
- Develop and create business reports out of Datawarehouse using SAP Business object as Reporting tool.
- Created visualization dashboard for ETL job status in Tableau.

ETL – Senior Consultant

IBM Corporation, USA

09/2019- 12/2024 Minneapolis, MN & Newark, NJ

- Discuss with business analysts to understand business requirements and convert them to technical specifications.
- Work as POC (point of contact) for Client and IBM higher management for the entire project lifecycle, starting from requirements gathering, development and testing.
- Providing business analytics and optimization services to the client.
- Manage build phase and quality assure code to ensure fulfilling requirements and adhering to ETL architecture.
- Creating detailed designed docs based on high level designed docs. Lead and guide development of an Informatica based ETL architecture. Head complex ETL requirements and design.

SUMMARY

Analytical minded individual with 11+ years of IT industry experience in ETL, data warehousing, modelling, analytics and SQL, shell scripting. Presently working in development & enhancement project in healthcare/insurance domain and having extensive competence in analysis, design, development, customizations, and implementation of software applications. Seeking an opportunity to contribute my expertise to a forward-thinking organization and drive data integration excellence.

CERTIFICATION

AWS Cloud Practitioners – 2024, ITIL Foundation

- Implement a n Informatica based ETL solution fulfilling stringent performance requirements.
- Performance tuning of the Informatica jobs and conversion of SQLs into informatica jobs.
- Providing support on Support Integration ticket work through JIRA and IBM CQ defects.
- Making Unit Test Cases based on business logic and testing of mappings and workflows.
- Working with QA team and helping them in creating test scripts.
- Develop work plans for releasing ETL data solutions during monthly release cycle.
- Verify the object and ETL code after migration and close the deployment request in IBM ClearQuest.
- Analyze and address issues that arise during or after deployment.
- Provide warranty support for any ETL solution in production for 1 month post deployment.

EXPERIENCE

Data specialist - ETL

IBM India Pvt. Ltd, India

 05/2013 - 09/2019  Bengaluru, Gurugram, NOIDA (INDIA)

- Created and implemented complex business intelligence solutions using Informatica PowerCenter as ETL solution tool.
- Managed end-to-end operations of ETL data pipelines.
- Involved in Unit testing, bug fixing and basic troubleshooting.
- Provided standalone support from offshore during Hypercare phase (post deployment) in production.
- Provided transition to the Prod Support team post deployment.
- Bug fixing/Enhancement with basic Design Analysis & Troubleshooting.
- As part of support team was primarily responsible to provided extended support in implementation to support data flow in Live (Production) and UAT environment for Asia-Pacific region.
- Handled data flow issues in Production and UAT environment, worked on adhoc data reports requested by users and support for migration activity and CR's implementation.
- Worked on daily data maintenance activities (partition creation, running of daily jobs, data cleansing)

EDUCATION

B.Tech : Computer Science

Gautam Buddha Technical University

 08/2008 - 06/2012  Ghaziabad, INDIA
