

SUMMARY

Results-driven Java Full Stack Developer with 5+ years of experience building scalable, high-performance web and enterprise applications. Proficient in Java, Spring Boot, Angular/React, RESTful APIs, and cloud platforms like AWS. Skilled in full SDLC, Agile methodologies, and DevOps practices, with a strong focus on clean code, system design, and cross-functional collaboration.

SKILLS

Programming Languages: Java, JavaScript, TypeScript, HTML5, CSS3, SQL, Bash

Backend Technologies: Spring Boot, Spring MVC, Spring Security, JPA, Microservices, RESTful APIs, WebSockets, Apache Kafka

Frontend Technologies: Angular, React.js, Redux, Bootstrap, jQuery, Thymeleaf, AJAX

Databases: MySQL, PostgreSQL, MongoDB, Oracle, Redis

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, CloudWatch), Azure (App Services, Functions)

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitHub Actions, Maven, Gradle, Terraform

Version Control & Collaboration: Git, GitHub, Bitbucket, JIRA, Confluence

Testing & Quality: JUnit, TestNG, OAuth2, Mockito, Postman, Selenium, REST

Monitoring & Logging: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Splunk

Methodologies: Agile/Scrum, TDD (Test-Driven Development), BDD (Behavior-Driven Development), CI/CD, Code Reviews

EXPERIENCE

M&T Bank

Jan 2024 – Present

Java Full Stack Developer

- Architected a suite of 12+ microservices using Spring Boot and RESTful APIs, integrated seamlessly with Angular-based frontends to support mission-critical banking workflows, achieving a 28% reduction in transaction latency across high-volume systems.
- Rebuilt loan servicing modules by replacing legacy JSP applications with Angular and Spring Boot, improving user interface responsiveness and decreasing portal load time by 1.3 seconds, leading to a 22% increase in daily active users.
- Engineered a real-time, Kafka-driven event processing pipeline to handle over 1.2M daily financial transactions for fraud detection and alerting, significantly reducing fraudulent activity response times by 30%.
- Orchestrated end-to-end CI/CD automation using Jenkins, Docker, and Kubernetes, enabling high-velocity, low-risk deployments and reducing release cycles from biweekly to bi-daily, while mitigating 40% of manual deployment errors.
- Designed a comprehensive observability stack incorporating Grafana, Prometheus, and Splunk across microservices, resulting in a 35% decrease in MTTR and improved operational resilience in production environments.

Hexaware Technologies

Jan 2021 – Aug 2022

Java Full Stack Developer

- Engineered eight enterprise-grade web applications using React, Spring Boot, and PostgreSQL, serving 50K+ users across financial and healthcare domains with enhanced error resilience and improved platform stability.
- Led the end-to-end cloud migration of three legacy systems to AWS (EC2, RDS, Lambda), driving reduction in infrastructure costs and ensuring seamless scalability for peak traffic loads exceeding 20K concurrent users.
- Fortified application security by integrating OAuth2 and Spring Security, decreasing authentication failure rates by 40% while maintaining compliance with HIPAA and ISO standards.
- Constructed a modular React component library with 40+ reusable UI elements, expediting front-end development cycles by 25% and enforcing design consistency across multiple engineering teams.
- Elevated code quality and test reliability by expanding JUnit and TestNG test suites, increasing coverage to 82% and reducing production defect leakage.

Cybage Software

Sep 2018 – Dec 2020

Software Engineer Associate

- Developed and supported five client-facing web applications using Java, JSP/Servlets, and Oracle DB, enabling 10K+ daily transactions while enhancing performance through backend optimization and modular code design.
- Optimized complex SQL queries and stored procedures, reducing report generation time from 15 minutes to under 4 minutes and accelerating decision-making processes for enterprise stakeholders.
- Contributed to the migration of monolithic legacy systems to Spring MVC, reducing UAT defect rates by 20% and improving long-term scalability and maintainability.
- Designed and implemented 10+ RESTful APIs for payment gateways and reporting modules, facilitating seamless integration with third-party vendors across insurance and e-commerce domains.
- Collaborated cross-functionally with QA and product teams in Agile sprints to triage and resolve 15–20 bugs per iteration, decreasing client escalations by 25% and improving delivery timelines.

EDUCATION

Masters of Computer and Information Science

Sep 2022 – May 2024

University of North Texas, Denton

Bachelors of Electronics and Communication Engineering

Jun 2015 – May 2019

Vasireddy Venkatadri Institute of Technology, India
