Profile

A highly proficient Full Stack Developer specializing in architectural decisions, infrastructure development, large database management, API development and Frontend Development. My experience is most focused on the Backend and skilled in programming languages including Python, JavaScript, Java and C#, with expertise in frameworks such as Django, Flask, Node.js, React/Vue/Angular, and .Net, among others. Adept at designing and optimizing databases, implementing robust security measures, and ensuring high performance and responsiveness in applications. Experienced in integrating various services and APIs, managing server infrastructure, and deploying scalable applications. Strong problem-solving abilities with in-depth knowledge of cloud platforms like AWS, GCP and Azure. Dedicated to maintaining and debugging server-side code to ensure reliable and scalable systems.

Professional Experience

Rad AI

07/2019 - present

Senior Full-Stack Engineer

- Led the redesign of project architecture, migrating from legacy systems to modern **Python/Django** and **JavaScript/React** frameworks.
- Designed and implemented a distributed microservices and serverless architecture, ensuring scalability and resilience.
- Developed a **GPS** tracking system managing over 100 devices, leveraging **AWS Lambda**, **Python**, and **React Native** for real-time location tracking.
- Engineered a real-time data streaming solution using **Apache Kafka** and **Apache Flink** for data ingestion, with **Python/Django** for processing and analytics.
- Optimized **infrastructure** and **CI/CD** pipelines with **Docker**, **Kubernetes**, **Terraform**, **Jenkins**, **Git**, and **AWS** to support seamless deployments and scalability.
- Implemented a **Retrieval-Augmented Generation (RAG)** system by integrating the **Ollama LLM** model for enhanced contextual retrieval and response generation.

- Mentored two developers in pair programming, architectural decisions, and code reviews, fostering a collaborative development environment.

Ford Motor Company

12/2016 - 06/2019

Senior Backend Engineer

- Executed a comprehensive microservice architecture project using **C#/.Net**, resulting in a streamlined and efficient system that boosted overall performance and scalability of the platform by 50%.
- Utilized **docker** for containerization of the project and deployed project into **AWS**.
- Implement the **Unit test** and **E2E** test using **dotnet-test** and **xUnit**.
- Built asynchronized Notification REST web service to send mess email/SMS with **Python** and **AWS SQS**.
- Integrated **OpenAI API** into geolocation workflows, enhancing data insights through **fine-tuning** and file processing.
- Used **GraphQL** to fetch data that is required for a component and feed that data into the **Redux** store avoiding multiple API calls to the backend.
- To monitor and diagnose performance issues and errors, I made logging and monitoring tools that provided real-time insights and metrics such as response time and errors rates.
- Involved in entire lifecycle of the delivering system including Design, Development, and deployment, Testing and implementation and support.
- Good working experience in designing database for delivering system using **Oracle** and using several algorithms for minimizing delivery time, reducing deliver costs and so on.
- Managed and maintained development of **Javascript/Node.js** backend for interactive database driven websites.

Jackson Healthcare

05/2015 - 11/2016

Software Developer

- Engineered Microservices architecture using **JAVA Spring BOOT**, optimizing client's system for scalability and performance; reduced API response time by 40%.
- Developed permission model for provisioning application using **JavaScript/React, C#/.Net**.
- Designed, optimized and managed **PostgreSQL** databases with several methods such as indexing, denormalization/normalization and so on.
- Built the infrastructure using **docker** and deployed to **GCP**.
- Implemented the **Elasticsearch** and improved the api loading time by 40% using **Redis**.
- Implemented advanced security protocols including password hashing and **SSL** encryption to fortify application against cyber threats; safeguarded user data and reduced risk of potential breaches by 40%.

Education

Cornell University

04/2011 - 04/2015

Bachelor's Degree of Computer Science

Certificates

Deep Learning Specialization  - [deeplearning.ai](#)

Skills

Language

Python, Javascript, Typescript, Java, C#

Library & Frameworks

Django, Flask, Fast API, Node.js, React, React Native, Vue, Angular, Next.js, .Net, Symfony, Spring, Kotlin

Infrastructure & CI/CD

Docker, Kubernetes, Terraform, Jenkins, Git, Salt, AWS, GCP, Azure

Database & Streaming

PostgreSQL, MySQL, Oracle, MongoDB, Redis, Salesforce, Elasticsearch, Snowflake, Apache Spark, Apache Kafka, Apache Flink, RabbitMQ
