

Olan Balogun

DevOps Engineer

olan.balogun@yahoo.com

4434227934

Experienced Azure Cloud & DevOps Engineer with a strong foundation in System Administration and over 6 years of hands-on experience in designing, deploying, and managing scalable cloud infrastructure and automation workflows. Skilled in leveraging Azure services such as Azure Virtual Machines, App Services, Kubernetes, and Networking to optimize and streamline cloud environments. Proficient in implementing DevOps pipelines using Azure DevOps, CI/CD processes, and Infrastructure as Code (IaC) through Terraform and ARM templates. Adept at automating system administration tasks using PowerShell, Bash, and Azure CLI, ensuring robust, reliable, and secure environments. A detail-oriented problem solver with strong experience in cloud migration, security practices, monitoring tools, and continuous integration, committed to improving operational efficiency and system performance.

Work Experience

Cloud Engineer

Aug 2022 - Present

UnitedHealth Group | Reston, VA

- Designing, implementing, and maintaining CI/CD pipelines using Azure Pipelines.
- Automating the build, test, and deployment processes for applications and services.
- Enforcing secure development practices and ensuring compliance with organizational policies.
- Managing application configurations and environment variables across different environments.
- Utilize Azure services like Virtual Machines, App Services, and Azure SQL Database.
- Deploy Application Gateway with Web Application Firewall (WAF) for secure web traffic.
- Use Azure Traffic Manager or Front Door for global traffic distribution.
- Configure and manage Azure DNS zones for internal and external name resolution.
- Deploying applications using various methods, such as Azure DevOps, Git, or CI/CD pipelines.
- Troubleshooting application issues and optimizing resource usage for cost efficiency.
- Enforcing security best practices, including enabling HTTPS, configuring custom domains, and securing apps using certificates.
- Managing Docker containers and orchestrating them using Azure Kubernetes Service (AKS).
- Manage rolling updates, rollbacks, and deployments using Kubernetes strategies.
- Integrate AKS with other Azure services using VNETs, private endpoints, and hybrid connectivity.
- Integrating with Azure AD for authentication and implementing identity and access management (IAM).
- Plan and deploy Azure Storage solutions like Blob Storage, Azure Files, and Disk Storage.
- Design backup and disaster recovery plans using Azure Backup and Azure Site Recovery.
- Monitor performance with Azure Monitor and implement lifecycle management policies.
- Design and implement Azure Active Directory (AAD) structures and configurations.
- Configure Conditional Access policies and manage Multi-Factor Authentication (MFA).
- Implement Azure Role-Based Access Control (RBAC) and Privileged Identity Management (PIM).
- Configuring Azure Load Balancers and Application Gateway for traffic distribution.
- Working closely with other teams, such as cloud engineers and security teams, to support overall infrastructure needs.
- Design and implement Prometheus monitoring for infrastructure, applications, and services.
- Optimize metric storage and retention policies to manage Prometheus' time-series database efficiently.
- Set up and configure alerts in Prometheus Alertmanager for system anomalies or threshold breaches.

- Facilitated the migration of existing on-premises infrastructure to Azure, adhering to enterprise-scale architecture and best Azure security practices.
- Directed the transition to a microservices architecture using Docker and Kubernetes, achieving a 50% decrease in downtime during deployments.
- Develop and manage Infrastructure as Code using tools like Terraform, or Azure Resource Manager (ARM) templates.
- Automate provisioning of Azure resources, including Virtual Machines, App Services, AKS, and Storage Accounts.
- Work with development, QA, and operations teams to streamline release processes.
- Implement application and infrastructure monitoring using Azure Monitor, Application Insights, or Log Analytics.
- Integrate security into DevOps workflows using tools like Azure Policy, security scanning, and DevSecOps practices.
- Identify opportunities for process automation in development, testing, and release workflows.
- Implement containerization using Docker and orchestration using Kubernetes or Azure Container Instances.
- Set and measure Service Level Objectives (SLOs) and Service Level Agreements (SLAs).
- Analyze and optimize system performance, ensuring scalability and cost-efficiency.
- Design and implement disaster recovery plans, including geo-redundancy and backup solutions.
- Optimize application configurations, scaling settings, and performance in Azure PaaS environments.
- Implement and manage platform-level security, including SSL/TLS, managed identity, and access control using Azure Active Directory (AAD).
- Apply best practices for data encryption (at rest and in transit) and secure integration between PaaS services.
- Optimize Azure PaaS service costs by analyzing resource usage and implementing auto-scaling policies.
- Design and implement Azure Virtual Networks (VNETs) to meet application and organizational requirements.
- Configure network components like subnets, network security groups (NSGs), route tables, and virtual network peering.
- Configure and manage hybrid cloud connectivity solutions for on-premises integration with Azure.
- Optimize network performance for low-latency and high-throughput requirements.
- Work closely with architects, security teams, and application developers to align network solutions with business requirements.
- Install and configure Hadoop components like Namenodes, Data nodes, Resource Managers, and Node Managers.
- Monitor cluster health using tools like Ambari, Cloudera Manager, or custom monitoring setups.
- Integrate HDFS with big data tools such as Hive, Spark, and HBase.

DevOps Engineer/SRE

Nov 2016 - Sep 2018

Walmart Inc. | Remote

- Migrated application deployment to Microsoft Azure Cloud PaaS by setting up CI/CD pipelines on Azure DevOps.
- Provision and manage Azure resources such as virtual machines (VMs), virtual networks, storage accounts, and Azure Active Directory (AAD).
- Configure and manage Azure compute resources including VMs, App Services, and Azure Functions.
- Implement security measures using Azure Security Center, Key Vault, and Azure Active Directory (AAD) for identity management.
- Manage Azure storage solutions such as Blob Storage, Disk Storage, and Azure Files.
- Monitor and optimize storage costs and performance, ensuring efficient data management.
- Troubleshoot and resolve issues related to network, computing, and storage resources in Azure

environments.

- Optimize cloud resource usage by resizing or scaling down underused resources and adjusting resource configurations.
- Install and configure operating systems, software, and applications on servers, workstations, and virtual environments.
- Maintain system software including patches, upgrades, and configuration changes.
- Configure and manage network devices, such as switches, routers, and firewalls.
- Set up and manage network connections (wired and wireless) to ensure optimal connectivity.
- Monitor network performance, troubleshoot connectivity issues, and optimize for speed and reliability.
- Implement security protocols such as firewalls, encryption, and antivirus software to protect systems.
- Configure and manage user access controls and permissions using Active Directory (AD) or similar systems.
- Implement backup solutions for critical systems and data using tools like backup software or cloud services.
- Identify and resolve issues related to system performance, including high CPU usage, memory consumption, or storage issues.
- Troubleshoot hardware and software problems across systems, networks, and applications.
- Automate routine system tasks such as backups, log monitoring, and user account management using scripts (e.g., Bash, PowerShell).
- Reset passwords and resolve user access issues related to system logins or resources.

Core Skills

Cloud Platforms: Azure, AWS, Infrastructure as Code: Terraform, Ansible,
CI/CD & Automation: Azure DevOps, GitHub Actions, GitOps, Argo CD,
Containerization & Orchestration: Kubernetes, Docker, Argo CD,
Monitoring & Logging: Prometheus, Grafana, BPM, RUM, SiteScope, APM, Azure monitor, App insights,
Version Control: GitHub, Azure Repo, Big Data & Messaging Tools: Ambari, Kafka, Yarn, Phoenix, Zookeeper,
Databases: MSSQL, MySQL, HBase, Azure SQL, Scripting & Programming: PowerShell, Bash, YAML, JSON,
Operating Systems: Windows, Linux, ITSM Tools: HP Service Manager, Rave, Salesforce, Manage Engine

Education

Lagos State University

Mar 2002 - Sep 2006

Bachelor Of Science (B.S.c.) Political Science and Government
