Database	SQL Server
XML Technologies	XML, XSLT
IDE	Visual Studio, SQL Server Management Studio
Application Servers	IIS 6.0 /7.0 and above
Framework	Dot Net framework 4.0/4.5

INTERNAL

External certifications	• Microsoft Windows SharePoint Services 3.0 - Application Development • Microsoft Office SharePoint Server 2007, Application Development • Microsoft SharePoint 2010, Application Development
-------------------------	---

Education:

Bachelor's in information technology from West Bengal University of Technology

Certification:

- Microsoft Windows SharePoint Services 3.0 - Application Development
- Microsoft Office SharePoint Server 2007, Application Development
- **Microsoft SharePoint 2010, Application Development**

Professional Experience:

Client: Con Edison, NY

June 2024- Present

Role: Sr. SharePoint / Power Platform Consultant/Architect

Project: Intranet Development/Support and Enhancement

Project Description: Con Edison's intranet portal was built on SharePoint On-Premises with extensive customizations, including complex Nintex workflows, forms, indexing, and reporting. As part of their cloud-first strategy, the company needed to migrate to SharePoint Online while ensuring minimal disruption to business operations.

Responsibilities:

- Led the migration of Con Edison's on-premises SharePoint intranet portal to SharePoint Online, ensuring seamless transition and minimal downtime
- Replaced legacy workflow processes with Power Automate to enhance efficiency and automation
- Developed custom SPFx components to replicate and enhance complex legacy functionalities
- Redesigned and rebuilt complex custom forms using Power Apps for a modern, user-friendly experience.
- Migrated extensive indexing, work processes, and reporting to SharePoint Online, utilizing Power BI for advanced analytics and reporting.
- Worked directly with business users to gather requirements, conduct design analysis, and ensure solutions aligned with business needs.
- Ensured best practices in SharePoint architecture, governance, and performance optimization
- Migration using ShareGate tool
- Writing PowerShell script to bulk update post migration issues in SharePoint list and libraries
- Using Power Automate to Schedule sync jobs across different platforms
- Training end users on new features and navigation of O365

Client: Cleary Gottlieb Steen & Hamilton, NY

April 2019- June 2024

Role: Sr. SharePoint / Power Platform Consultant/Architect

Project: Intranet Development/Support and Enhancement

Project Description: Cleary has designed and developed their Intranet Portal on SharePoint on premise framework with extensive customization which needs support, and it needs enhancement as well for a lot of new requirements that are being demanded by various business users.

Responsibilities:

- Requirement gathering from various department users and creating requirement specification documents
- Migrating contents and solutions to latest version of SharePoint
- Developing custom SharePoint Add-ins using SPFX, Angular, CSOM and server-side object model
- Customizing SharePoint Search
- Development of custom SharePoint 2013/2016/2019 based intranet portal
- Creating custom business connectivity services
- Designing user interface with Responsive design approach
- Responsible for code maintenance in Visual Studio Team Foundation Server

INTERNAL

- Perform application deployment & maintenance activities
- Application build, deployment and general maintenance.

Client: Third Point LLC, NY

Jan 2018- Feb 2019

Role: Sr. SharePoint Consultant/ Architect

Project: Intranet/Extranet Development

Project Description: Third Point is replacing their old SharePoint On premise environment with SharePoint Online and creating a new Intranet Portal for the company users and also developing an extranet portal for the external users. Building a global Vendor Management Process across all the departments is another critical aspect of this project. Also, we need to design and develop various custom SharePoint solutions and integrate various third-party tools such as Nintex workflows and Forms, DocuSign, Muhimbi etc. to satisfy the end user need.

Responsibilities:

- Requirement gathering from various department users and creating requirement specification documents
- Creating Company Intranet Governance Plan for SharePoint
- Creating proof of concepts on various third-party tools such as Nintex forms, workflows, Muhimbi and DocuSign to check feasibility on some requirements
- Helping company users to structure and design the intranet home page wireframe
- Building several workflows using MS flow such as, Approval flow, sending email attachments to SP doc library, extracting the envelope status from DocuSign to SharePoint using DocuSign connector, enabling optical Character Recognition using Muhimbi activities exposed in flow, converting documents to PDF and merging them into a single file, Scheduling various backend jobs etc.
- Development of a custom SharePoint based intranet and Extranet on SharePoint online.
- Designing user interface with Responsive design approach
- Developing custom SharePoint Add-ins using CSOM
- Developing PowerShell scripts to deploy solutions, and to automate report generation
- Responsible for code maintenance in GitHub
- Perform application deployment & maintenance activities
- Provided technical assistance to Project with project planning and review sessions.
- Application build, deployment and general maintenance.

Client: Putnam Investments, Boston, MA

Apr 2017- November 2017

Role: SharePoint Consultant/ Architect

Project: Intranet Development

Project Description: Putnam had a plan to replace their intranet solution with custom SharePoint intranet solution, on Office 365. And had the need to design and develop various custom SharePoint solutions to satisfy their end user needs.

Responsibilities:

- Development of a custom SharePoint based intranet on SharePoint online.
- Designed user interface with Responsive design approach
- Developed custom SharePoint Add-ins using CSOM
- Implemented AngularJS controllers to maintain view data
- Developed AngularJS services, to interact with SharePoint REST API
- Used ODATA standard queries to fetch data from SharePoint lists/libraries
- Developed PowerShell scripts to deploy solutions, and to automate report generation
- Migrating pages from non-SharePoint env to SharePoint online using Metalogix
- Develop an intranet for external users (non-domain users)
- Responsible for Team Foundation Services and SVN code maintenance.
- Code-reviews for the code optimization to acquire high performance and quality of system
- Assist the development team with the design & development of custom master pages and page layouts
- Perform application deployment & maintenance activities
- Provided technical assistance to Project Managers and Business Analysts with project planning and review sessions.
- Designed (low-level) solutions for features, bug fixes and enhancements.
- Application build, deployment and general maintenance.
- Participate in peer-to-peer code reviews.
- Troubleshoot application performance and security issues in production.
- Assisting with application transition to support teams and managing application documentation

INTERNAL

Role- SharePoint Consultant

Responsibilities: Requirement Analysis, Design and development, Testing and deployment

Environment: SharePoint Online, Share gate, Metalogix, SharePoint Designer 2013, PowerShell

Client: Novartis Pharmaceuticals, NJ

Mar 2015 – Mar 2017

Role: Sr. SharePoint onsite Co-Ordinator/ Developer

Project: SP 2010 to SP 2013 Migration Program

Project Description: This program involves migrating multiple SharePoint 2010 applications to O365 cloud and SharePoint 2013 on premise. The total number of sites identified to be migrated is around 430 considering both cloud and on-premises approach. This also requires extensive planning, proper communication and interaction with various business stakeholders.

Responsibilities:

- Leading a team of 5 to 6 developers
- Understanding business requirements and document them in the form of URS and FS
- Analysis and design of existing 2010 application considering SP Online platform
- Migrating data using Metalogix Tool and content DB approach
- Developing web parts using client-side scripting, jQuery, JavaScript, InfoPath and SPD
- Customizing Master page, page layouts
- Creating workflows using SharePoint Designer and Nintex
- Customizing Search
- Developing New Branding using HTML, CSS and jQuery

Role- SharePoint Consultant, Lead, Business Analyst

Responsibilities: Requirement Analysis, Design and development, Onsite Coordination, Team management and extensive client Interactions for multiple applications

Client: Novartis Pharmaceuticals, NJ

Aug 2014 – Dec 2014

Role: Subject Matter Expert/ SharePoint

Project: OTC SharePoint Support COE

Project Description: This involved developing and enhancing the Internal Portal for OTC division and it also included migration of SP 2007 sites to SP 2010 platform using Metalogix tool and upgrading custom InfoPath 2007 forms to InfoPath 2010 Forms. Enesys reporting was also used extensively in the sites. Integrating the Documentum with SharePoint was another important aspect of this project.

Responsibilities:

- Worked as an Individual Contributor
- Understanding business requirements and document it in the form of URS and FS
- Analysis and design of existing 2007 application considering SP 2010 Platform
- Migrating data using Metalogix and content DB approach
- Developing web parts using client-side scripting, jQuery, JavaScript, InfoPath and SPD
- Customizing Master page, page layouts
- Developing New Branding using HTML, CSS and JavaScript
- Developing workflows using Nintex and SharePoint Designer

Role- SharePoint Technology Lead, Business Analyst

Responsibilities: Requirement Analysis, Design and development, Deployment and Client Interactions

Environment: SharePoint 2010, InfoPath Forms, Nintex Workflows 2007/2010, SharePoint Designer 2007/2010, Enesys Reporting, IIS 7.0, Visual Studio 2010, and Windows Server 2008

Client: Novartis Pharmaceuticals, NJ

Jan 2012 – Jul 2014

Role: Technical Lead

Project: EWS Lifecycle Management Operations

Project Description: EWS Lifecycle Management Operations is a SharePoint migration Program. This involved migrating multiple SP 2007 OOTB/Custom applications to SP 2010 platform using various migration methods based on the complexity of the applications such as content db. Migration, Metalogix tool etc.

Responsibilities:

- Leading a team of 5 to 6 developers
- Understanding business requirements and document it in the form of URS and FS
- Analysis and design of existing 2007 application to SP 2010

INTERNAL

- Migrating data using Metalogix and content DB approach
- Developing web parts using client-side scripting, jQuery, JavaScript, InfoPath and SPD
- Customizing Master page, page layouts
- Developing New Branding using HTML, CSS and JavaScript
- Developing workflows using Nintex and SharePoint Designer
- Developing reports using Enesys

Role- Business Analyst and Technology Lead

Responsibilities: Requirement Analysis, Design and development, Testing, Deployment and client Interactions

Environment: SharePoint 2007/2010, Admin Approved InfoPath Forms, Nintex Workflows 2007/2010, SharePoint Designer 2007/2010, Enesys Reporting, IIS 6.0, Visual Studio 2010, and Windows Server 2008

Client: Indus Towers, India

Sep 2011 – Dec 2011

Role: Sr. Software Engineer

Project: Enhancing and maintaining Intranet Portal

Project Description: Client is a telecom major. The intranet portal was developed on MOSS 2007, and it involved support and enhancement of existing features. It has various features like news, search, people search, content targeting, publishing, workflows etc.

Responsibilities:

- Worked as an Individual Contributor
- Supported an Intranet Portal built on SharePoint
- Developed web parts using Server-side object model
- Customizing Master page, page layouts
- Developing workflows using SharePoint Designer and Visual Studio

Role- Senior SharePoint Developer

Responsibilities: Requirement Analysis, Design and development, Testing, Deployment

Environment: SharePoint 2010, OOTB InfoPath Forms, SharePoint Workflows, Visual Studio 2008, and Windows Server 2008

Client: Kellogg's, India

Jan 2011 – Aug 2011

Role: Technical Analyst

Project: Design and development of an Intranet Portal

Project Description: This project involved requirement gatherings, design, development, testing and deployment for various modules. It was developed on SharePoint 2010 with FAST search integration. It also included various features Like news, content targeting, publishing, branding, workflows, and integration with ADs etc.

Responsibilities:

- Worked as an Individual Contributor
- Installed and configured FAST Search Server and Fast Search Web parts
- Integrated LDAP profile services with SharePoint
- Developed web parts using Server-side object model
- Customizing Master page, page layouts
- Developing workflows using SharePoint Designer and Visual Studio

Role- Technology Analyst

Responsibilities: FAST Search Lead, Design and development, Testing and deployment

Environment: SharePoint 2010, FAST Search Server 2010, Nintex Workflows 2010, SharePoint Designer 2010, IIS 6.0, Visual Studio 2010, and Windows Server 2008

Client: The Body shop International, UK

Apr 2010 – Dec 2010

Role: Onsite Co-ordinate/ Tech Lead

Project: Data Capture Management System

Project Description: The client is a leading fragrance retailer in the UK. This involved creating a data capture management application along with captcha feature for campaigns to Stop Sex Trafficking of Children and Young People. An integral part of this campaign is the petition. This utilizes The Body Shop reputation as a human rights champion, its large number of global stores (over 2,500 in 65 countries), and its 23 market websites, to encourage people to sign up.

Responsibilities:

INTERNAL

- Worked as SharePoint Developer and onsite coordinator
- Developed web parts, Event Receivers, Features using Server-side object model
- Customizing Master page, page layouts and search
- Integrated captcha with the petition signs up page

Role- SharePoint Lead/ Onsite Coordinator

Responsibilities: Req. Analysis, Design and development, Testing, Deployment and Onsite Coordination

Environment- ASP.NET, C#. Net 3.5, SQL SERVER 2008, Windows Server 2008

Client: CVS Pharmaceutical, India

Apr 2007 – Mar 2010

Role: Developer

Project: Design and develop an Intranet Portal

Project Description: The client has merged with another company and wanted to build a new common intranet portal for the merged entity. This project involved complete customization on various SharePoint features starting from custom branding, features, master pages, web parts, list definitions, custom search, and integration with LDAP etc. This also included setting up SharePoint farms and administrative configurations.

Responsibilities:

- Worked as SharePoint Developer
- Developed web parts using Server-side object model
- Customizing Master page, page layouts
- Customized Search web parts
- Developing workflows using SharePoint Designer and Visual Studio

Role- SharePoint Developer

Responsibilities: Requirement Analysis, Design and development, Testing, Deployment

Environment: SharePoint Server 2007, ASP.NET, C#. Net 2.0, SQL SERVER 2008, Visual Studio 2005
