Phone: +1 (469) 943-7780

Professional Summary:

- **AWS Certified Solutions Architect** and **Java Full Stack Developer** with around **6 years of experience** in designing, developing, and deploying **cloud-native architectures**, **microservices**, and **distributed systems**. Adept at creating scalable and high-performance applications with a focus on **cloud computing**, **security**, and **automation**.
- Highly proficient in **Java**, **J2EE**, **Spring Boot**, **Spring Cloud**, and **Microservices** for building robust enterprise applications that are both scalable and maintainable. Expertise in using **Hibernate/JPA** for efficient **Object-Relational Mapping (ORM)**, optimizing database interactions and performance.
- Extensive experience in **front-end development** using **React.js**, **Angular**, **JavaScript**, **HTML5**, and **CSS3**. Skilled in building dynamic, responsive, and interactive user interfaces to enhance user experience and engagement, with a deep understanding of modern **JavaScript frameworks** like **Node.js** and **Express.js**.
- Hands-on expertise in developing **RESTful APIs** and **Web Services** (REST/SOAP) using **Spring Boot** and **JAX-RS**, ensuring seamless integration between microservices and third-party services.
- Adept at building **event-driven architectures** with **Apache Kafka**, **AWS Kinesis**, and **RabbitMQ** to process real-time events, resulting in optimized performance and cost savings.
- In-depth knowledge of **cloud infrastructure** management, particularly in **AWS** (including **EC2**, **S3**, **RDS**, **Lambda**, **API Gateway**, **Step Functions**, and **DynamoDB**) and **Microsoft Azure**. Skilled in configuring and managing cloud resources, ensuring high availability, security, and cost efficiency.
- Experienced in **DevOps automation** using **Terraform**, **AWS CloudFormation**, **Jenkins**, **GitLab CI**, **Docker**, and **Kubernetes**. Proficient in implementing **CI/CD pipelines** to streamline deployment, reduce operational overhead, and ensure faster, more efficient software delivery.
- Strong experience in working with **relational databases** like **PostgreSQL**, **MySQL**, **Oracle**, and **SQL Server**, as well as **NoSQL databases** like **MongoDB**, ensuring efficient data management, retrieval, and optimization.
- Skilled in writing optimized **SQL queries**, **stored procedures**, and **functions** to enhance database performance.
- Knowledgeable in **big data technologies** like **Apache Hadoop** and **Apache Spark**, supporting efficient data processing, analytics, and large-scale data pipeline optimization for improved decision-making.
- Proficient in **Test Driven Development (TDD)** and experienced in using frameworks such as **JUnit**, **Mockito**, **Postman**, **Selenium**, and **TestNG** to ensure code reliability, quality, and performance throughout the software lifecycle.
- Proven ability to **mentor junior developers** and collaborate with cross-functional teams, including **business analysts**, **system architects**, and **QA engineers**, to deliver high-quality software solutions.
- Strong analytical and problem-solving skills, with a commitment to **continuous improvement** and adoption of **Agile** and **Scrum methodologies** to enhance project execution and delivery timelines.

Technical Skills:

Programming Languages	Java 17/11/8, C#, Python
Java Frameworks	Spring, Spring Boot, Spring Cloud, Spring MVC, Spring Security, Hibernate, Spring Cloud Gateway
Java/J2EE Technologies	Hibernate, Struts, JSP, Kafka, JDBC, JPA
Web Services	REST APIs, SOAP, JAX-RS, JAX-WS, GraphQL, XML

Web Development	HTML5, CSS3, JavaScript, AJAX, jQuery, Bootstrap, React.js, Angular 16, Node.js, Express.js
Databases	PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, DynamoDB
Cloud Computing	AWS (EC2, S3, RDS, Lambda, API Gateway, Step Functions, DynamoDB, Kinesis, CloudWatch, Cognito)
Version Control Systems	Git, Bitbucket, SVN
Build Tools	Maven, Gradle
Testing Frameworks	JUnit, TestNG, Postman, Selenium, Mockito
IDEs	IntelliJ IDEA, Eclipse
Containerization and Orchestration	Docker, Kubernetes
DevOps Tools	Jenkins, Ansible, ELK Stack, Prometheus, Grafana
Operating Systems	Windows, macOS and Linux
Other Tools	SonarQube, Jira, OAuth 2.0, AWS AI Services, OpenAI

Work Experience:

Client: Confidential, Dallas, TX

Aug 2024 - Present

Role: Java Developer

Responsibilities:

- Architected and developed cloud-native applications using **Java 11, J2EE, Spring Boot, and Microservices**, ensuring **scalability, high availability, and optimized system performance**.
- Designed and maintained **RESTful APIs** using **Spring Boot and JAX-RS**, ensuring seamless integration with third-party services.
- Developed **event-driven architectures** leveraging **AWS Kinesis, Kafka, and Step Functions**, enabling **real-time processing of 1M+ events per day** while reducing infrastructure costs by **30%**.
- Built dynamic, responsive **user interfaces** using **React.js, TypeScript, and AJAX**, improving **user engagement and performance**.
- Designed and implemented **GraphQL APIs** for efficient data querying, enhancing **application flexibility and response times**.
- Implemented secure **authentication** and **authorization** mechanisms, including **OAuth 2.0, JWT, and AWS Cognito**, ensuring robust **application security and access control**.
- Automated infrastructure provisioning using **Terraform, AWS CloudFormation**, and **serverless architectures**, improving deployment efficiency by **50%**.
- Leveraged big data technologies, including **Apache Hadoop and Apache Spark**, for **batch processing and large-scale data analytics**, enabling efficient **data processing pipelines**.
- Defined and optimized **SQL queries, stored procedures, and functions** using **PostgreSQL, MySQL, and DynamoDB**, improving database efficiency by **25%**.
- Integrated **AI-powered APIs** (OpenAI, AWS AI Services) to automate **workflow processes and enhance cloud functionalities**, leading to **faster decision-making and improved automation**.
- Configured and optimized **API Gateway** services in AWS, reducing API response times by **30%** and ensuring **efficient API management**.
- Leveraged **IntelliJ IDEA's** advanced **debugging, refactoring, and profiling features**, leading to **efficient troubleshooting** and faster issue resolution.
- Executed **unit and integration testing** using **JUnit, Mockito, and Postman**, reducing **production defects by 30%** and ensuring code quality.
- Implemented **CI/CD pipelines** using **GitLab CI, Docker, Kubernetes, and Jenkins**, streamlining software development and **reducing deployment cycles**.

- Monitored and analyzed system logs using **ELK Stack**, improving **system observability** and **reducing downtime** by **15%** through proactive issue resolution.

Client: Discover, Farnborough, UK

Jan 2022 – July 2023

Role: Java Full Stack Developer

Responsibilities:

- Designed, developed, and implemented **scalable and secure** Java microservices using **Spring Boot, Spring Cloud, and REST APIs**, ensuring **99.9% uptime** and seamless performance.
- Led **migration of 10+ applications** from **PCF to OpenShift on AWS**, optimizing cloud infrastructure, reducing operational costs by **20%**, and enhancing scalability.
- Developed and maintained **event-driven architectures** leveraging **Apache Kafka & AWS Kinesis**, processing **1M+ real-time events per day** for efficient data streaming and analytics.
- Built and optimized **responsive UI components** using **Angular 16, NgRx, and TypeScript**, improving **user experience and front-end performance**.
- Engineered **secure authentication and authorization mechanisms** using **OAuth 2.0 and JWT**, ensuring **compliance with security standards and API protection**.
- Contributed to **modernizing legacy systems** by integrating **React components** with **JavaScript frameworks**, enhancing **front-end functionality and user engagement**.
- Developed and optimized **SQL queries and procedures** for **PostgreSQL and MySQL**, improving **database query performance by 20%**.
- Automated **unit and integration tests** using **JUnit and Mockito**, increasing **test coverage** and **reducing production defects by 30%**.
- Defined and implemented **error handling and validation mechanisms** for **JSON responses**, enhancing **API reliability and user experience**.
- Designed and deployed **microservices architecture** using **Spring Boot and Kubernetes**, ensuring **high availability and efficient scaling**.
- Integrated **AWS EC2, RDS, and S3** for **cloud infrastructure management**, reducing **operational costs by 15%** while optimizing storage and compute resources.
- Utilized **SonarQube quality gates** to enforce **code quality standards**, reducing **production bugs by 30%** and improving **development efficiency**.
- Provided **technical mentorship** to junior developers, conducting **code reviews and best practice training**, leading to improved **team productivity and code maintainability**.

Client: Discover, Farnborough, UK

Jan 2021 – Dec 2021

Role: Java Developer

Responsibilities:

- Developed and maintained **Java applications** utilizing **Java 8** for a payment processing project enhancement, ensuring seamless operations and improving customer satisfaction.
- Collaborated in **Agile and Scrum** practices, working with product managers, designers, and data analysts to translate business requirements into efficient technical solutions, reducing project turnaround time by **10%**.
- Applied **object-oriented programming (OOP)** principles and **design patterns** to develop maintainable and reusable code, enhancing code quality and development efficiency.
- Developed **RESTful APIs** using **Spring Boot**, achieving a **20% reduction in response times** and improving overall application performance.
- Automated **CI/CD pipelines** using **Jenkins and Git**, streamlining development workflows and reducing deployment time by **30%**.
- Optimized **PostgreSQL queries**, reducing execution time from **1.2s to 300ms**, significantly improving database performance.

- Developed interactive front-end components using **JavaScript** and **jQuery**, enhancing user engagement and interface functionality.
- Implemented database solutions using **MySQL**, ensuring efficient data storage and retrieval, contributing to improved application performance.
- Developed SQL procedures and functions using **Oracle**, enhancing data retrieval efficiency.
- Automated testing processes using **JUnit** and **Mockito**, ensuring the reliability of individual components and reducing production defects by **20%**.
- Managed source code using **version control systems** like **SVN**, ensuring efficient collaboration and code management.
- Deployed applications on the **Tomcat application server**, ensuring reliable and efficient application hosting.
- Monitored system performance and proactive issue detection using **Grafana**, contributing to a **10% reduction in downtime**.

Client: ITC InfoTech, Hyderabad, India.

Jan 2018 – Nov 2019

Role: Software Engineer

Responsibilities:

- Built **RESTful APIs** and **microservices** using **Spring Boot**, enhancing ERP system integration and streamlining service communication.
- Leveraged **Angular** and **React** to develop dynamic front-end components, improving **user experience (UX)** and increasing engagement.
- **Automated deployment processes** using **Jenkins**, improving release cycles by **25%** and optimizing **CI/CD pipelines** for efficient software delivery.
- Integrated **Spring Framework** for implementing **dependency injection**, enhancing application flexibility and scalability.
- Developed **asynchronous RESTful microservices** using **Spring MVC** and **Spring Boot**, ensuring high performance and seamless communication between internal services.
- Optimized **Oracle** and **SQL Server** database performance by fine-tuning queries and indexing, improving **data retrieval efficiency** and ensuring high availability.
- Implemented **OAuth 2.0** and **JWT** for secure authentication and authorization, ensuring robust **security** for RESTful APIs and microservices.
- Utilized **AWS EC2, EBS, Lambda, RDS, CloudWatch**, and **S3** for scalable cloud infrastructure management, improving **resource allocation** and operational efficiency.
- Worked with **Jenkins** to automate build and deployment scripts, reducing manual errors and enhancing development speed.
- **Collaborated with cross-functional teams** to ensure efficient integration of front-end and back-end components, leading to better system interoperability and optimized performance.
- Used **Git** for version control, ensuring smooth code collaboration and change tracking across teams.

Education

Master's in Computer & Information Science
Southern Arkansas University

Aug 2023 – May 2025

Master's in Cloud Computing
University Of Leicester, UK.

Jan 2020 – Dec 2020

Certifications

AWS Certified Solutions Architect – Sept 2024
Associate
