PROFILE

Innovative software engineer with a decade of proven expertise in designing robust architectures and spearheading the development of highly-scalable applications and services. Specializing in backend-heavy full stack engineering, I have consistently delivered cutting-edge solutions that optimize performance, elevate user experiences, and drive business growth. My proficiency spans multiple languages including Java and JavaScript / TypeScript, enabling me to engineer solutions that seamlessly blend technology stacks for maximum efficiency. Adept at prioritizing clean code, robust architecture, and pragmatic solutions to meet project goals effectively.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, JOOR

12/2021 – 12/2024 | United States

- Worked on a small Agile team to develop and maintain microservices in Node and Java for the JOOR digital showroom, supporting over one million global transactions daily and enhancing order processing efficiency.
- Implemented a comprehensive order management system using Java Spring Boot, integrating brand catalogs with retailer orders and achieving a 30% reduction in order processing time.
- Collaborated with cross-functional teams to design a Cassandra schema to support multi-terabyte datasets, ensuring minimal latency and high availability for JOOR's analytics suite, handling 500,000+ daily queries.
- Transitioned legacy REST backends to gRPC, resulting in a 40% improvement in data transfer efficiency and reducing network latency by 25%.
- Built responsive frontend components for the digital showroom using React, achieving a 50% reduction in bundle size and improving load times across the platform.
- Architected scalable infrastructure using AWS services, including EC2, S3, and RDS, which led to a 15% reduction in costs and improved platform reliability.
- Automated CI/CD pipelines with Jenkins and Bitbucket, reducing release times by 50% and achieving a 95% deployment success rate.
- Deployed and managed containerized applications using Docker and Kubernetes, supporting auto-scaling and maintaining 99.9% service uptime.
- Integrated Apache Kafka into the architecture to establish a robust messaging system, facilitating real-time data processing and communication between microservices, ensuring seamless scalability and fault tolerance within the order management system infrastructure.
- Conducted accessibility testing with axe-core, ensuring JOOR's platform met WCAG 2.0 AA standards and enhanced user accessibility for all customers.
- Led monitoring and incident response efforts with Datadog and LogRocket, maintaining 95% test coverage. Notably, resolved a checkout failure in Saudi Arabia, impacting 4,000 customers, by quickly implementing a reverse proxy solution to reroute traffic and restore service.

Senior Software Engineer, Gad AI

09/2018 – 11/2021 | United States

- Built scalable SaaS web applications using Java, Spring Boot, Node.js for backend, and React for frontend development to deliver robust and responsive solutions that meet client requirements and enhance user experience.
- Integrated payment systems such as Stripe, PayPal and credit card processing, allowing users to securely process payments online.
- Implemented features such as subscription management, invoice generation and automated payment reminders.
- Migrated backend of SaaS tool built in Typescript to Java in microservice architecture and empowered event-driven systems using AWS Eventbridge, Lambdas, CDK and S3.
- Created a serverless invoice management system using Node.js, AWS Lambda, SQS/SNS, S3, and DynamoDB. Integrated OCR to extract relevant data from invoices, enabling automated invoice processing and document management.
- Integrated the CRM system of the company with HubSpot, enabling seamless synchronization of customer data, lead generation, and marketing automation.
- Designed and developed mobile applications using React Native, providing a seamless experience for mobile users.
- Designed and managed Relational (like MySQL, PostgreSQL) and NoSQL databases (like MongoDB), implementing robust data models and efficient queries for optimal performance.
- Led the migration process of the enterprise-level application from JHipster to Spring Boot independently to streamline application performance, improve scalability, and enhance overall system reliability.

- Focused on Java performance tuning and applying caching solutions like Redis and Memcached, JVM Optimization, Code Profiling, coupled with comprehensive testing strategies to ensure application efficiency and reliability.
- Adopted AWS services such as EC2, SNS, RDS, Elastic Beanstalk, and Lambda to deploy and manage the application.
- Utilized React, Reactive forms alongside the Form Builder for creating sophisticated forms with integrated validation, while enhancing the user interface through React Material components.
- Collaborated with drilling engineers and project managers, frontend and backend engineers to enhance operational efficiency and optimize resource utilization, ensuring successful project execution in the gas and oil industry.

Software Engineer, Palantir Technologies

11/2015 – 09/2018 | United States

- Participated in the development of dozens of projects in social networking, crowdsourcing, technology brokerage, healthcare, eCommerce, fintech, etc using HTML, CSS, Javascript, jQuery.
- Implemented more than one thousands of pages from Figma design into responsive Javascript components
- Collaborated with the backend API team, contributed to architecture design, and ensured desired client-server interaction model, data flow, and performance.
- Closely communicated with the UI/UX design team, ensuring the proper experience with animations, behavior, and pixel-perfect markup.
- Contributed to the UX design process.

SKILLS

Languages

Core Java, JavaScript (ES6+), TypeScript, HTML5, CSS3

Front-end Development

- Frameworks and Libraries: React/React-Native (React Hooks, React Router, React Query), Next.js, Vue.js, Angular
- State Management: Redux, Redux-Toolkit, Mobx, Context API, Recoil, Jotai
- UI Libraries: Styled components, Material-UI (MUI), Tailwind CSS, Ant Design, Chakra UI, Storybook, Theme UI
- Animation Libraries: Framer Motion, React Spring, React Transition Group

Back-end Development

- Frameworks: Node, Express, Nest, Spring Boot, Spring MVC
- Database: MongoDB, MySQL, PostgreSQL, DynamoDB
- Data Fetching and Management: Memorization, GraphQL or REST API, gRPC, NATs, Kafka, RabbitMQ, Redis, Elasticsearch

Architecture and Cloud Technologies

- Microservices (Event-Driven Architecture), Monolithics
- AWS Services: Lambda, API Gateway, S3, DynamoDB, CloudWatch, EC2, CDK, SQS, SNS, DynamoDB, Elastic Beanstalk
- DevOps: Github, Gitlab, CI/CD, Heroku, Docker, Nginx, Kubernetes, Terraform

Testing and Optimization

- Frameworks: Jest, Mocha, Chai, React Testing Library, Cypress, Selenium
- Performance Testing: Lighthouse, React Profiler, DevTools Profiler, Loadtest
- Bundle Optimization: Webpack Bundle Analyzer, Rollup, Code Splitting with Webpack, Babel
- Performance Monitoring: Real User Monitoring (RUM), Google Analytics, Datadog, Sentry

Third-Party Service

Stripe, PayPal, HubSpot, Salesforce, Shopify, OpenAI, OCR, ChatGPT, Twilio, SendGrid

SOFT SKILLS

- **Collaboration & Teamwork:** Mentorship and Knowledge Sharing, Agile Methodologies, Waterfall
- **Problem Solving & Analytical Skills:** Analytical Thinking, Debugging Techniques, Error Handling and Logging
- **Continuous Learning & Growth:** Staying updated, Engagement in personal and side projects
- **Leadership & Management:** Team leadership and Collaboration, Time Management and Prioritization

EDUCATION

University of California - Berkeley, Bachelor's in Computer Science

10/2011 – 11/2015 | United States
