SUMMARY

Senior Full Stack Engineer

- Seasoned Java Full Stack Developer with over 9 years of experience in designing, developing, and managing scalable web applications and microservices architectures.
- Proven expertise in leveraging **Java** frameworks such as **Spring Boot**, **Spring Cloud**, and **Hibernate** to build robust backend services.
- Demonstrated proficiency in frontend development with **React** and **Angular**, enhancing user experiences through dynamic and responsive interfaces.
- Adept at implementing **microservices** and integrating them with frontend technologies to streamline operations and improve system performance.
- Experienced in leading development teams, managing projects through the full software development lifecycle, and adopting **DevOps** practices to optimize CI/CD pipelines using Jenkins, Docker, and Kubernetes.
- Skilled in cloud services, particularly AWS, for deploying and managing applications, and well-versed in database optimization and API development.
- Strong communicator with a track record of successful stakeholder management and team mentorship.

SKILL SET

Front-End Development

- Frameworks & Libraries: **Angular** (AngularJS, Angular 2+, Angular 13, Angular 14), **React** (Redux, Next.js, Gatsby.js)
- Styling: HTML5, CSS3, Sass, Bootstrap, TailwindCSS.
- Tooling: Angular CLI, Webpack, Babel, Prettier, ESLint, TSLint.

Back-End Development

- Frameworks: **Spring Boot**, Spring Cloud, Spring MVC, **Hibernate**, JPA
- Database Technologies: **MySQL**, PostgreSQL, MongoDB, SQL Server, Redis, **Oracle**
- API Development: **RESTful APIs**, **GraphQL**, SOAP, Swagger UI, JSON/XML data exchange
- Microservices Architecture: Design and implementation using Spring Boot, integration with frontend frameworks, service-to-service communication with GraphQL

Cloud & DevOps

- Platforms: **AWS** (Elastic Beanstalk, Lambda, S3, RDS, CloudFormation), **Azure** App Service, Azure Functions, Azure SQL Database, Azure Blob Storage, Azure Virtual Machines, Azure Kubernetes Service (AKS), Azure DevOps
 - Messaging & Event-Driven Systems: **RabbitMQ**, Azure Service Bus, Apache Kafka.
 - Continuous Integration/Continuous Deployment: AWS, Azure DevOps, Jenkins, GitHub Actions
 - Containerization & Orchestration: Docker, Kubernetes.
-

EDUCATION

B.S. Bachelor of Computer Science – California State University, 2012

PROFESSIONAL EXPERIENCE

Senior Java Full Stack Engineer
Microsoft, Pennington, New Jersey
May 2020 – Present

- Led the development of a scalable **microservices** architecture using **Spring Boot**, **Spring Cloud**, and **React**, improving system performance and reliability.
- Architected and implemented backend services and APIs using **Spring Boot** and **Hibernate**, facilitating seamless data exchange and integration.
- Utilized **React** for dynamic, single-page applications and **Angular 14** for complex user interfaces.
- Designed and implemented frontend components and user interfaces with **React** and **Angular**, incorporating state management with **Redux** and **NgRx** to manage complex application states effectively.
- Oversaw the migration of legacy systems to a modern **microservices** architecture, enhancing maintainability and scalability.
- Implemented service-to-service communication using **GraphQL** to optimize data fetching and reduce response times by 14%.
- Managed a team of 10 developers, providing technical guidance and mentorship, resulting in increased efficiency and improved code quality.
- Conducted regular code reviews and introduced best practices in **microservices** design and frontend development.
- Implemented **DevOps** practices, including setting up CI/CD pipelines with **Jenkins** and **GitLab CI**, and containerizing applications using **Docker**.
- Orchestrated container deployments and scaling with **Kubernetes**.
- Designed and executed database optimization strategies, including indexing and partitioning, which reduced query response times by 35%.
- Coordinated with cross-functional teams, including QA, product management, and business analysts, to gather requirements and deliver solutions that met stakeholder expectations.
- Utilized **Agile** methodologies to manage and deliver projects.
- Utilized **AWS** services for cloud deployment, including setting up **AWS Lambda** functions, **S3** for object storage, and **RDS** for database management.
- Implemented serverless functions to streamline backend processes and reduce costs.
- Led the adoption of new technologies and tools, such as **GraphQL** and **Angular 14**, enhancing the overall system performance and developer productivity.
- Ensured seamless integration of frontend and backend components through microservices.

Senior Software Engineer
Capital One, Columbus, SC
Sep 2016 – Apr 2020

- Developed and maintained enterprise-level web applications using Java **Spring MVC**, **Hibernate**, and **Angular**, delivering features that significantly enhanced user experience and operational efficiency.
- Integrated microservices using **Spring Boot** and **Angular** to manage application complexity.
- Designed and implemented complex business logic and integrations with third-party services, including payment gateways and social media APIs.
- Leveraged **React** for building interactive UI components and **Angular** for complex SPA functionality.

- Managed the full software development lifecycle for key projects, from requirements gathering and design to development, testing, and deployment.
- Implemented **microservices** to enhance scalability and maintainability of applications.
- Led the implementation of CI/CD pipelines using Jenkins, Docker, and Kubernetes, which streamlined the deployment process and improved delivery speed.
- Automated the build and deployment of **microservices** to various environments.
- Coordinated with frontend developers to integrate **Angular** components with backend services, ensuring seamless data handling and user experience.
- Used **React** to create reusable UI components and manage application state with Redux.
- Created and optimized RESTful APIs to support various frontend and mobile applications, ensuring high performance and scalability.
- Employed **GraphQL** for efficient data querying and reduced the number of API calls.
- Established best practices for coding, testing, and deployment, including automated testing with JUnit and integration with Jenkins for continuous integration.
- Implemented end-to-end testing for microservices and frontend components.
- Utilized AWS for cloud services, including deploying applications on Elastic Beanstalk, managing databases with RDS, and handling object storage with S3.
- Integrated AWS services with microservices architecture.
- Provided technical leadership and mentorship to junior developers, helping them enhance their skills and contribute effectively to the team.
- Guided the adoption of new technologies such as Angular 14 and microservices patterns.
- Managed stakeholder expectations by regularly communicating project progress, addressing concerns, and adapting to changing requirements.
- Ensured effective collaboration between frontend and backend teams to deliver high-quality solutions.

Full Stack Engineer

Tata Consultancy Services, Columbus, SC

October 2013 – Feb 2016

- Contributed to the development of web applications using **Java Spring**, **Hibernate**, and jQuery, delivering key functionalities and improving user experience.
- Integrated **microservices** with frontend components for seamless operation.
- Developed RESTful APIs and integrated with external services, ensuring reliable and secure data exchange.
- Utilized **AngularJS** for frontend development
- Assisted in the design and implementation of frontend components using HTML, CSS, and JavaScript, adhering to best practices for responsive design.
- Implemented UI features with **jQuery** for dynamic and interactive elements.
- Participated in code reviews and collaborated with team members to ensure adherence to coding standards and best practices.
- Contributed to the development of **microservices** and their integration with frontend applications.
- Engaged in the creation of automated test cases using **JUnit** and **Mockito**, improving the overall reliability of the codebase.
- Ensured comprehensive test coverage for both backend services and frontend components.
- Implemented version control practices using Git, facilitating efficient code management and collaboration within the team.
- Managed code repositories and handled branching and merging strategies.
- Contributed to the setup and management of CI/CD pipelines using **Maven** and Jenkins, automating the build and deployment processes.
- Deployed **microservices** and frontend applications to staging and production environments.

- Worked closely with business analysts and product managers to understand requirements and deliver solutions that met project objectives.
- Coordinated with teams to ensure timely delivery of features and bug fixes.
- Engaged in **Agile** development practices, participating in sprint planning, daily stand-ups, and retrospectives to ensure project alignment and progress.
- Implemented **microservices** architecture within Agile sprints.
- Assisted in database design and optimization, including creating and managing schemas, indexes, and query performance tuning.
- Integrated database solutions with microservices for efficient data handling.
