Professional Summary

Results-driven Java Full Stack Developer with 4+ years of expertise architecting scalable microservices and cloud-native applications on AWS and GCP. Proven track record transforming legacy systems to Spring Boot microservices, processing 15M+ annual transactions with 99.9% uptime. Expert in event-driven architecture, containerization, and DevOps automation delivering 40% cost reduction and 35% performance improvements. Strong leadership in mentoring engineering teams and implementing enterprise-grade security solutions.

Technical Skills

Programming Languages

Java 8/11/17, JavaScript, TypeScript, C, C++, SQL, HTML5, CSS

ORM & Database Technologies

Hibernate, Spring Data JPA, SQL, MySQL, PostgreSQL, MongoDB, MS SQL Server, Oracle Database, Database Performance Tuning

Cloud & DevOps

AWS (ECS, EC2, RDS, CloudFormation, Auto-Scaling), Azure, GCP, Docker, Kubernetes, Jenkins, Maven, CI/CD Pipelines

Operating Systems

Windows, Linux, macOS

Web Technologies & Frameworks

JSP, Servlets, JDBC, JSTL, JPA, Web Services, SOAP, REST APIs, HTML, JavaBeans, JavaScript, AJAX, J2EE, Spring Framework, Spring MVC, Spring Boot, Microservices, RESTful Web Services, React, Angular Framework, UI/UX Design Principles

Monitoring & Observability

Splunk, ELK Stack, Grafana, Prometheus, AppDynamics, New Relic

Development Tools & Platforms

Eclipse, IntelliJ Idea, Postman, Swagger API, VS Code, JIRA, GitHub, Bitbucket, SVN, Git, Confluence, AWS Console, Technical Documentation, API Documentation

Middleware & Enterprise Architecture

Spring Boot, Spring Cloud, Spring Reactive Framework, Microservices Architecture, RabbitMQ, Kafka, Message-Driven Architecture, Node.js, Express.js, NPM Ecosystem

Security & Compliance

OAuth 2.0, Data Protection, PCI-DSS, HIPAA, SOC 2 Compliance, SSL/TLS

Methodologies & Architecture

Agile, Scrum, Software Development Life Cycle (SDLC), System Design, Microservices Architecture, Technical Mentoring, Team Leadership, Code Review Leadership

Professional Experience

Java Full Stack Developer, State Farm

01/2024 – Present

- Architected an engineering team delivering mission-critical Java/J2EE applications processing 5M+ daily transactions; reduced system downtime by 25% through advanced multi-threading optimization and Collections API tuning
- Spearheaded microservices transformation initiative migrating 2+ legacy monolithic applications to Spring Boot and Spring Cloud architecture; reduced deployment time from hours to minutes and cut infrastructure costs by 40%
- Designed and managed Kubernetes-orchestrated microservices deployment on GCP, achieving 99.9% uptime SLA while scaling to handle 50K+ concurrent users; implemented auto-scaling policies reducing operational overhead by 35%
- Led end-to-end Spring Boot and Spring Reactive Framework implementation for next-generation microservices; optimized reactive streams for non-blocking I/O, improving throughput by 15% and reducing memory footprint by 25%
- Drove DevOps transformation initiative, implementing comprehensive SDLC practices and CI/CD pipeline with Jenkins and Maven, increased deployment frequency
- Architected React JS and Angular modernization program, designing responsive web application interfaces with advanced UI/UX patterns and state management; improved user engagement metrics and reduced application load time
- Engineered full-stack microservices using Node.js and Express.js coupled with React front-end and Spring Boot backend, enabling seamless integration across the technology stack and reducing API response time by 35%
- Engineered scalable backend architecture using TypeScript and SQL Server, implementing complex business logic with zero data loss and improved query accuracy across millions of transactions
- Mentored junior developers on Spring Boot best practices, SOLID principles, and microservices design patterns; resulted in 30% improvement in code review quality.

Java Developer, Deloitte

01/2022 – 08/2023

- Led end-to-end deployment strategy for Spring Boot microservices on Docker and Amazon ECS, managing infrastructure provisioning, container orchestration, and production monitoring; achieved 99.8% uptime and scaled to handle 500K+ daily API requests
- Architected reactive Java microservices using Spring Boot and Spring Reactive Framework for Target's non-receipted returns modernization initiative; leveraged Kafka for real-time event processing, reduced error rates, improved processing speed.
- Managed comprehensive database infrastructure transformation, designing and optimizing complex Oracle databases with advanced stored procedures and indexing strategies for mission-critical applications; achieved 35% reduction in query execution time
- Implemented enterprise-grade security architecture, designing and deploying OAuth 2.0 authentication framework protecting millions of user accounts; ensured robust access control and end-to-end data protection across all APIs and services
- Created comprehensive technical documentation and API specifications using Swagger/OpenAPI standards; ensured compliance with PCI-DSS, HIPAA, and SOC 2 regulations across microservices protecting millions of customer transactions
- Drove monitoring and observability transformation, implementing comprehensive Cassandra health monitoring and alerting system with proactive incident detection; increased system uptime and reduced incident response time

Associate Java Developer, Cargill

06/2020 – 12/2021

- Contributed to the development of Core Java web applications used by internal teams, improving application responsiveness through basic SQL query tuning.
- Assisted in maintaining MySQL and PostgreSQL databases by updating indexes, reviewing slow queries, and supporting routine performance tuning tasks.
- Built responsive UI components using Angular, HTML5, and CSS3, ensuring clean, reusable, and maintainable front-end code.
- Participated in all phases of the SDLC including requirement discussions, development, testing, and deployment while working in Agile sprints.
- Worked closely with QA and Product teams to support test cycles, debug issues, and ensure high-quality deliverables.
- Supported automation of routine tasks using Python and C#, reducing manual effort by 15% through simple workflow scripts.

Education

Master of Science in Information Security, Murray State University

08/2023 – 05/2025

Bachelor of Technology in Computer Science Engineering, Jawaharlal Nehru Technological University

07/2015 – 05/2019
