Ashburn, VA 20147 | +1-716-908-0895 | [LinkedIn](#) | pramilarmy@gmail.com | [GitHub](#)

Full Stack Developer with 6 years of experience building scalable Java/Spring Boot and Golang microservices, and ReactJS front-end solutions on AWS and Azure. Skilled in RESTful APIs, CI/CD, and Agile DevOps practices for secure, high-performance cloud applications.

TECHNICAL SKILLS

Programming Languages: Java, Golang, Python, JavaScript, C++

Frameworks and Libraries: Spring Boot, Spring Data JPA, Hibernate, ReactJS, JAX-RS/JAX-WS, GraphQL, OpenAPI

Front-End: ReactJS, HTML5, CSS3, Bootstrap

Databases: PostgreSQL, MongoDB, SQL Server

Messaging & Integration: Kafka, REST, SOAP

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Jenkins, Git, Maven, Gradle

Practices & Tools: Microservices Architecture, CI/CD, TDD, SDLC, Swagger, Agile Scrum

EXPERIENCE

Senior Software Developer, Accenture Solutions Pvt Ltd, Mumbai

Nov 2018 – Aug 2024

Accenture Momentum

Sep 2022 – Aug 2024

- Designed and developed Java/Spring Boot and Golang microservices for Role-Based Access Control (RBAC) and performance tracking systems deployed on Azure Cloud.
- Built and consumed RESTful APIs and integrated with front-end teams using ReactJS, improving end-to-end response time by 30%.
- Migrated REST endpoints to GraphQL APIs, reducing network calls by 20%.
- Enhanced CI/CD pipelines using Jenkins and Docker, improving release efficiency by 40%.
- Adopted Test-Driven Development, increasing JUnit test coverage to 90%.

Ohio National Financial Services (ONFS)

Oct 2021- Sep 2022

- Developed microservices for Term and Whole Life products with Spring Boot and Golang, increasing throughput for high-volume API calls.
- Implemented concurrent processing with Java multithreading to handle 200K+ transactions daily.
- Configured Prometheus + Grafana dashboards for real-time system monitoring and performance tracking.
- Followed Agile and DevOps best practices throughout the SDLC lifecycle.

The Guardian Life Insurance Company of America (GLIC)

Jan 2021 – Oct 2021

- Created OAuth 2.0-enabled REST APIs for Critical Illness features, improving API security compliance by 100%.
- Used Docker, Git, and Maven to streamline CI/CD pipelines, reducing deployment time by 40%.
- Implemented policy as a code using Terraform for upgrading external connectivity to clients to use application proxy.
- Authored OpenAPI/Swagger documentation, decreasing third-party on boarding time by 50%.

MassMutual (MM)/ Allianz Life (AZL)

Apr 2020 – Jan 2021

- Implemented backend workflows for claims, loans, and surrenders, reducing manual interventions by 35%.
- Diagnosed and resolved UAT defects, ensuring 100% on-time releases for three consecutive quarters.
- Configured product rules for Indexed Universal Life and resolved staging environmental issues.

New York Life (NYL)/ American International Group (AIG)/ ATHENE

Nov 2018 – Apr 2020

- Owned backend development for Term Life insurance product, improving response time by 30% through SQL.
- Optimized PostgreSQL queries for large datasets, reducing data retrieval time by 40%.

ACADEMIC PROJECTS

Full-Stack URL Shortener Web App:

- Built a full-stack URL shortener using React, Next.js, and TypeScript with RESTful API integration for intuitive link management.
- Deployed on Netlify; implemented input validation, unique short-link generation, and responsive UI for usability.
- Designed backend API layer and experimented with Kotlin-based microservice endpoints for scalability and strong typing.

Taco-DB Framework:

- Implemented a mini database system in C++17 within the Taco-DB framework, focusing on schema, storage, and record management.
- Validated functionality and performance using Google Test, gaining hands-on experience in query processing, low-level memory management, and systems programming.

Medical Data Classification and Digit Recognition using ML and Deep Learning:

- Developed and compared Models (LDA, QDA, SVM, Ridge Regression) and neural networks (MLP, CNN) for diabetes prediction and MNIST digit classification.
- Achieved up to 98.7% test accuracy by optimizing model parameters and leveraging PyTorch for deep learning experiments.

Sustainable Tourism Recommendation System using ML and Spatial Indexing

- Built a machine learning-based recommender system using Ball Tree indexing and models like Random Forest and KNN to suggest less crowded tourist spots. Developed a PostgreSQL-backed web app for itinerary generation, data visualization, and tourism demand management.

EDUCATION

University at Buffalo, The State University of New York

Dec 2025

Master of Science, Computer Science

Usha Mittal Institute of Technology, Mumbai, India

Jun 2018

Bachelor of Technology, Information Technology

AWARDS AND CERTIFICATES

- Certificate in "AI and Career Empowerment," University of Maryland Robert H. Smith School of Business (Sep 2025)
- Awarded "Star Player of Year" for work and commitment to the Momentum project
- Completed "Full Stack Engineer School" in MERN stack by Learning and Knowledge Management (LKM)
