

Pranathi Gundagani - Full Stack Developer

(678) 806-8051 | pranathig1207@gmail.com

PROFESSIONAL SUMMARY

Highly accomplished Full Stack Developer with 7+ years of expertise in designing, developing, and implementing robust enterprise-scale applications leveraging J2EE and diverse open-source Java frameworks, including Spring, Struts, and Hibernate/JPA. Proven ability to analyze complex business requirements, perform comprehensive gap analysis, and craft scalable application solutions that integrate seamlessly across front-end and back-end components. Skilled in developing and securing RESTful and SOAP-based web services, optimizing data management, and constructing responsive web interfaces with modern front-end technologies like Vue.js, Angular, HTML5, CSS3, and Bootstrap. Experienced in full lifecycle involvement from requirement gathering and application design to development and quality assurance. Successfully led multiple application releases, enforced rigorous code standards, mentored junior developers, and collaborated effectively with business analysts and clients to deliver impactful technical specifications and solutions.

TECHNICAL SKILLS

- **Programming Languages:** Java (Core, J2EE, Java 17), Python, JavaScript (ES6+), TypeScript, C#
- **J2EE Technologies:** JSP, Servlets, EJB, JMS, MDB, JCA
- **Java Frameworks:** Spring Boot, Spring Web Flux, Spring Security, Hibernate ORM, JPA, Struts
- **Web Services & Integration:** RESTful APIs, SOAP/WSDL, XSLT, API Gateway
- **Front-End Development:** HTML5, CSS3, JavaScript, TypeScript, Node.js, Angular, React.js, Vue.js, Bootstrap, Tailwind CSS
- **Cloud Platforms & Services:** AWS (EC2, ECS, Lambda, S3, RDS, DynamoDB, CloudFront, CloudWatch), Google Cloud (App Engine, Cloud SQL)
- **Database Management:** MySQL, PostgreSQL, MongoDB, DynamoDB, Redis
- **Messaging & Caching:** Kafka, RabbitMQ, Redis
- **DevOps & CI/CD:** Jenkins, GitHub Actions, Docker, Kubernetes, Terraform
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack, Datadog, CloudWatch
- **Version Control & Collaboration:** Git, GitHub, Bitbucket, Jira, Confluence
- **Security & Access Control:** JWT, OAuth2, Keycloak, Spring Security
- **Testing & Quality Assurance:** JUnit 5, Mockito, Jasmine, Karma, Cypress, Cucumber BDD, SonarQube

WORK EXPERIENCE

Full Stack Developer

Baylor Scott & White Health - Dallas, TX

June 2024 - Present

Responsibilities:

- Developed secure RESTful API endpoints and robust back-end integrations in Java and Spring Boot, processing over 50,000 daily transactions with JWT/OAuth2 for data security.
- Integrated front-end components seamlessly with a React.js front-end, optimizing state management and API caching to reduce page response times from 1.8s to under 1s.
- Built automated unit and integration test suites utilizing JUnit 5, Mockito, and Cypress, which achieved 85% code coverage and significantly reduced post-release defects.
- Deployed enterprise microservices on AWS Lambda and ECS, enabling automatic scaling to effectively support seasonal traffic spikes of three times the normal load without downtime.
- Implemented object storage and efficient data archival solutions in AWS S3, reducing infrastructure costs by 18% while maintaining stringent compliance with data retention policies.
- Applied advanced design patterns like Factory and Circuit Breaker through Resilience4j, enhancing overall system resilience and decreasing critical downtime incidents.

- Managed relational databases (PostgreSQL) and in-memory data stores (Redis), optimizing complex queries and caching strategies to improve API response times by 40%.
- Introduced Terraform-based Infrastructure as Code (IaC) for environment provisioning, drastically cutting environment setup efforts from days to under four hours.
- Enhanced system observability using comprehensive CloudWatch dashboards and proactive alerts, facilitating faster root-cause analysis and reducing Mean Time to Resolution (MTTR).
- Documented REST APIs thoroughly with Swagger (OpenAPI) and Postman collections, accelerating developer onboarding and streamlining integration processes across teams.
- Coordinated with Quality Assurance and front-end teams using Postman collections, standardizing API validation and expediting critical test feedback loops effectively.
- Designed Kafka-based messaging pipelines to efficiently handle high-volume event streams, improving system scalability and ensuring reliable processing across distributed services.

Environment: Java, Spring Boot, Spring Security, REST APIs, JWT/OAuth2, React.js, PostgreSQL, Redis, AWS Lambda, AWS ECS, AWS S3, Terraform, CloudWatch, Resilience4j, Swagger, Postman, Git, GitHub, Jira, Confluence, Agile/Scrum

Full Stack Engineer

Capgemini - Hyderabad, India

June 2022 - July 2023

Responsibilities:

- Upgraded legacy application services from Java 11 to Spring Boot 3.x and Java 17, replacing outdated libraries and achieving significant performance gains with backward compatibility.
- Engineered scalable microservices utilizing Spring Boot and Hibernate ORM, successfully reducing database access latency by 35% compared to the previous monolithic application.
- Developed dynamic Angular-based dashboards supported by REST APIs, empowering analysts to visualize key sales KPIs and reducing manual Excel reporting efforts by 50%.
- Implemented robust role-based authentication using Keycloak and JWT, ensuring strict compliance with audit requirements and strengthening the overall data security posture.
- Authored and meticulously maintained Swagger/OpenAPI specifications, significantly accelerating developer onboarding and simplifying API integration processes for cross-functional teams.
- Transitioned the product catalog database from a Relational system to MongoDB, leveraging flexible schemas that successfully shortened feature delivery timelines by 20%.
- Optimized build processes through sophisticated Maven multi-module configurations and enforced rigorous quality checks via SonarQube, effectively reducing defects found in later stages.
- Increased front-end reliability by developing comprehensive Jasmine and Karma unit tests, achieving broader test coverage across critical Angular components.
- Facilitated engaging Cucumber BDD workshops with key stakeholders, transforming acceptance criteria into executable automated tests and reducing manual Quality Assurance cycles.
- Integrated RabbitMQ for asynchronous batch job processing, effectively balancing system load by shifting heavy computational tasks to off-peak hours.
- Established Prometheus and Grafana dashboards for monitoring JVM metrics, enabling proactive detection and resolution of performance bottlenecks before impacting user transactions.
- Administered source control with Bitbucket, conducting structured peer reviews to uphold stringent coding standards and ensure the stability of production environments.

Environment: Java 17, Spring Boot 3.x, Hibernate ORM, RESTful APIs, Angular, Keycloak, JWT, Swagger/OpenAPI, Maven, SonarQube, MongoDB, RabbitMQ, AWS (S3, EC2, ECS), Prometheus, Grafana, Jasmine, Karma, Cucumber BDD, JUnit 5, Mockito, Bitbucket, Jira, Confluence

Software Developer

JP Morgan Chase - Hyderabad, India

July 2019 - May 2022

Responsibilities:

- Collaborated extensively with stakeholders and product teams to accurately gather requirements, successfully delivering over 15 Agile sprints with a consistent 95% on-time completion rate.
- Gathered precise requirements with business stakeholders and built secure REST APIs using Spring Boot and Spring Security, implementing OAuth2/JWT for sensitive customer data protection.
- Designed and developed robust backend services using Java SE, Spring Boot, and Hibernate, improving API performance by 30% and significantly reducing error rates across applications.
- Built responsive user interfaces with HTML5, Angular, Vue.js, and Tailwind CSS, enhancing customer satisfaction scores by 20% across various applications.
- Wrote comprehensive JUnit and Mockito test cases, significantly raising overall test coverage and effectively preventing regression issues during crucial release cycles.
- Implemented continuous integration and continuous delivery (CI/CD) pipelines using Jenkins, automating build, test, and deployment processes to reduce manual effort and errors.
- Optimized data processing capabilities with Java Streams and parallel streams, simplifying complex code and reducing execution time for large datasets effectively.
- Implemented high-performance multithreaded services utilizing Executor Service and Completable Future, improving throughput and responsiveness for concurrent API requests.
- Validated and documented all API endpoints thoroughly with Postman collections, ensuring consistent and clear collaboration between front-end and back-end development teams.
- Designed and consistently applied common design patterns (Factory, Observer, DTO) across services to maintain a consistent architecture and simplify onboarding for new developers.
- Configured comprehensive monitoring dashboards in Grafana and proactive alerts in Prometheus, enabling rapid detection of issues and faster incident resolution times.
- Led a critical database migration initiative from MySQL to PostgreSQL, ensuring complete data integrity and achieving zero downtime through a phased rollout and validation scripts.

Environment: Java SE, Spring Boot, Spring Security, Hibernate, REST APIs, OAuth2/JWT, Java Streams, Multithreading, HTML5, Angular, Vue.js, Tailwind CSS, Postman, JUnit 5, Mockito, Jenkins, Grafana, Prometheus, MySQL, PostgreSQL, Google Cloud (App Engine, Cloud SQL), Agile/Scrum, Jira

EDUCATION

Master of Science in Computer Science from Texas Tech University
