

SUSMITA R

SENIOR PYTHON DEVELOPER (BACKEND FOCUS)

susmitareddy08@gmail.com | LINKEDIN | GITHUB | Ph#: 737-277-0434

Professional Summary

Senior Python Developer with over 7 years of experience specializing in the design, development, and deployment of scalable back-end services. Expertise in building robust applications using Python and Django, with a proven ability to flex to the front-end to build dynamic UIs in React. Proficient in architecting and managing systems which operate at scale on cloud platforms, with hands-on experience in AWS services including SQS, SNS, and EC2. Adept at implementing features end-to-end, from building RESTful APIs in Python to integrating with build pipelines for seamless deployment to production.

Key Competencies/Skills

Languages: Python 3.x/2.7, SQL

Python Frameworks: Django, Flask

Back-End Technologies: RESTful APIs, Microservices, OpenSearch, Elasticsearch

Front-End Technologies: React, JavaScript, HTML5, CSS3, JQuery, Bootstrap, AJAX

Cloud & DevOps: AWS (SNS, SQS, EKS, EC2, S3), Terraform, Helm, Docker

Python Libraries: Pandas, NumPy, Matplotlib, SciPy, SQLAlchemy

Databases: MySQL, PostgreSQL, MS SQL, Oracle

Methodologies: Agile, Scrum, CI/CD, End-to-End Development

IDE'S: PyCharm, Eclipse, PyDev

Operating Systems: Linux, UNIX, Window

Professional Experience

Client: UMC Health Systems, Lubbock, TX

Feb 2023 - Present

Title: Senior Python Developer

Accomplishments:

- Engineered and deployed high-performance back-end services in Python using the Django framework, directly addressing core application logic and scalability requirements.
- Developed and maintained RESTful APIs to facilitate seamless data exchange between the server-side and front-end components.
- Built and integrated responsive front-end UIs using React.js with Redux, demonstrating the ability to flex from back-end to front-end development.
- Managed system deployment on AWS, leveraging cloud architecture to ensure high availability and performance for production environments.
- Interacted with build pipelines to automate testing and deployment, ensuring reliable and frequent updates to production.
- Developed Python scripts to perform data aggregation and analysis from various sources, utilizing PySpark for large-scale data processing.
- Implemented complex SQL queries and stored procedures to interact with MySQL databases from the Python backend.
- Collaborated within an Agile team to deliver end-to-end features, from product requirement analysis to final deployment.

Environment: Python, Django, React.js, AWS, PySpark, RESTful, MVC, HTML5, CSS3, JavaScript, Bootstrap, Numpy, Pandas, AJAX, JQuery, MySQL, Agile, Windows.

Client: Equifax, Atlanta, GA

Sep 2022 – Jan 2023

Title: Python Developer

Accomplishments:

- Developed scalable back-end microservices using Python and Django, deployed on AWS servers using EC2.
- Built UIs in React, creating rich functions for form validation, data grids, search, and sorting.

- Integrated with existing RESTful APIs and AWS services to expand application functionality and ensure system interoperability.
- Utilized technologies like ElasticSearch for data indexing and analysis, enhancing data retrieval capabilities for unstructured data.
- Refactored a large, existing Django/Python codebase, significantly reducing code duplication and improving maintainability for a system operating at scale.
- Wrote and optimized complex SQL queries, stored procedures, and triggers for MySQL and PostgreSQL databases.
- Developed Python batch processors to consume and produce various data feeds, ensuring reliable data flow within the system.
- Participated in the full software development lifecycle within an Agile environment, contributing to daily stand-ups and sprint planning.

Environment: Python 3.x, Django, React.JS, AWS, PySpark, MVC, HTML5, CSS3, JavaScript, Bootstrap, Matplotlib, AJAX, JSON, REST, MySQL, PostgreSQL, Agile.

Company: Homesite Insurance, Boston, MA

June 2021 – Aug 2022

Title: Python Developer

Accomplishments:

- Implemented back-end business logic and data exchange modules using Python and Django.
- Developed web applications designed to operate at scale, leveraging AWS EC2 for cluster management and processing big data requests with PySpark.
- Built APIs in Python to support a user-friendly website interface, integrating front-end components built with Angular.js and JQuery.
- Managed data processing and statistical analysis using Python libraries including Pandas, Numpy, and Scipy.
- Designed and developed SQL queries, stored procedures, and triggers in an Oracle database environment.
- Contributed to system analysis, design, development, and testing as part of a team using Agile (Scrum) methodologies.
- Utilized JSON data objects for efficient data transmission between front-end and back-end controllers.

Environment: Python 3.x, Django, AWS, MVC, HTML5, CSS3, JavaScript, Angular.JS, OOP, AJAX, JQuery, JSON, Numpy, Pandas, Matplotlib, Scipy, Oracle, SQL, Agile.

Company: Webtrace Software Solution Pvt Ltd, India

May 2016 - Jul 2019

Title: Junior Python Developer

Accomplishments:

- Contributed to the full development lifecycle of websites, including design, development, testing, and deployment.
- Developed back-end components for web applications using Python with the Django and Flask frameworks.
- Implemented Python code to retrieve, manipulate, and manage large datasets using Panda data frames and MySQL.
- Built front-end layouts and components using HTML5, CSS3, JavaScript, and Bootstrap.
- Performed troubleshooting and deployed numerous Python bug fixes to maintain and enhance production applications.
- Assisted in modifying Django models and managing database schema changes while ensuring data integrity in a live production environment.

Environment: Python, Django, HTML, CSS, JavaScript, Bootstrap, Angular.JS, Panda, JQuery, JSON, MySQL and Windows.
