

SAI SUPREETH PAPISHETTY

Maryville, MO | +1 (660)-541-3124 | saisupreethpapishetty@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Java Developer with 5 years of experience designing and delivering scalable backend systems, microservices, and cloud-native applications using Java and Spring Boot.
- Expertise in building RESTful and GraphQL APIs and integrating AWS services like Lambda, S3, SQS, and DynamoDB for secure, high-performance solutions.
- Skilled in full-stack development using React.js, Angular, Redux, and Next.js to create responsive dashboards and real-time analytics.
- Proficient in implementing CI/CD pipelines, automated testing, and monitoring frameworks, improving system reliability and operational efficiency.
- Strong collaborator with cross-functional teams, delivering fintech and enterprise applications aligned with business objectives and modern cloud architectures.
- Solid understanding of event-driven architecture, distributed systems, and cloud-native design to build maintainable, scalable, and high-performing solutions.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript (ES6+), TypeScript, Python.

Backend Development: Spring Boot, Spring MVC, Spring Security, RESTful APIs, GraphQL, Microservices Architecture, Hibernate, JPA, Spring Cloud, WebSockets, gRPC.

Frontend Development: React.js, Angular 16+, Redux, Next.js, Tailwind CSS, Bootstrap, HTML5, CSS3, Material-UI, Chakra UI.

Database & Storage: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, S3, Aurora, ElasticSearch.

Cloud & DevOps: AWS (Lambda, S3, SQS, Kinesis, Firehose, DynamoDB, SNS, CloudWatch, ECS, EKS), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD pipelines, Terraform.

Testing & Quality Assurance: JUnit 5, Mockito, TestNG, Postman, Selenium, REST Assured.

Tools & Frameworks: Git, Maven, Gradle, Webpack, Node.js, NPM, Yarn, Webots.

Architecture & Concepts: Event-Driven Architecture, Scalable Distributed Systems, Cloud-Native Application Design, Microservices, Serverless Architecture, Data Pipelines, Agile & Scrum, CI/CD Best Practices.

PROFESSIONAL EXPERIENCE

Java Backend Developer

Sep 2024- Present

PayPal | Maryville, USA

- Led the development of a Virtual Bank Accounts system using Java 17, Spring Boot, and AWS Lambda, enabling seamless cross-border transactions for merchants and reducing settlement delays by 30%.
- Designed and implemented a usage-based billing system for OpenAI and enterprise clients, automating invoice generation with DynamoDB and S3, cutting manual billing operations by 70% while improving accuracy.
- Streamlined merchant transaction processing by integrating RESTful and GraphQL APIs, which enhanced data consistency and reduced redundant API calls across multiple services.
- Secured client and merchant operations by building CRUD APIs with Spring Security and JWT, enforcing role-based access control and ensuring PCI DSS compliance for sensitive financial data.
- Enhanced microservices performance by applying asynchronous processing and multithreading in Java, leveraging AWS SQS and DynamoDB Streams to minimize service latency during peak traffic.
- Established monitoring pipelines using AWS CloudWatch and Lambda, enabling real-time alerts that improved operational visibility and accelerated incident resolution by 35%.
- Developed responsive merchant dashboards with React.js, Redux, and Material-UI, providing actionable insights and visual analytics that increased user engagement by 20%.
- Collaborated with cross-functional teams to implement an event-driven backend architecture, supporting rapid feature deployment and improving scalability and reliability across high-volume fintech operations.

Java Developer

Jun 2024- Aug 2024

PNC Financial Services | Maryville, USA

- Designed and implemented RESTful APIs with Spring Boot, PostgreSQL, and MongoDB, improving banking transaction efficiency and reducing data retrieval time by 25%.
- Created GraphQL schemas for microservices orchestration, enhancing data consistency across customer-facing applications and eliminating redundant API calls by 30%.
- Developed middleware integrations to connect disparate financial microservices, streamlining operations and decreasing transactional errors by 20%.
- Implemented role-based access control and JWT authentication using Spring Security, securing sensitive banking workflows and ensuring compliance with internal policies.
- Built automated logging and alert pipelines using AWS CloudWatch and S3, improving system observability and reducing downtime by 20% during high-demand periods.
- Leveraged Redis caching to optimize high-traffic API endpoints, boosting response speed and enhancing real-time dashboard performance for banking analysts.
- Conducted comprehensive unit and integration testing with JUnit 5, Mockito, and Postman, minimizing production defects and ensuring seamless deployment of financial services.
- Collaborated with cross-functional teams to design scalable backend workflows, integrating microservices and cloud tools to support rapid feature deployment in banking applications.

Java Developer

Mar 2020- Dec 2022

Amazon Development Centre Pvt Ltd | Hyderabad, India

- Engineered RESTful APIs with Spring Boot, PostgreSQL, and MongoDB, accelerating banking transaction processing and reducing data retrieval time by 25%.
- Developed GraphQL schemas for multiple microservices, ensuring consistent data delivery to customer-facing applications and cutting redundant API calls by 30%.
- Integrated disparate financial microservices through middleware solutions, streamlining workflows and lowering transactional errors by 20%.
- Implemented role-based access control and JWT authentication with Spring Security, securing sensitive operations and enforcing compliance across banking systems.
- Built automated logging and monitoring pipelines using AWS CloudWatch and S3, improving observability and reducing downtime by 20% during high-traffic periods.
- Optimized high-demand API endpoints with Redis caching, enhancing response speed and real-time dashboard performance for banking analysts.
- Conducted unit and integration testing with JUnit 5, Mockito, and Postman, reducing production defects and ensuring reliable, high-quality service delivery.

Full Stack Engineer

May 2019- Feb 2020

Fortunapix | Hyderabad, India

- Built Java-based crawlers and backend services to extract unstructured data from GCS, ADLS2, and S3, automating ingestion and reducing manual effort by 50%.
- Streamlined metadata extraction from PostgreSQL and MySQL, improving storage mapping efficiency and accelerating analytics workflows by 40%.
- Developed a cron-driven scheduler to automate metadata fetching, enhancing system uptime and reducing operational errors by 30%.
- Optimized crawler concurrency and backend workflows, increasing data retrieval speed and ensuring consistency across large-scale pipelines.
- Implemented logging and error-handling mechanisms to improve system reliability and simplify maintenance for ongoing operations.
- Integrated React.js dashboards with backend APIs, delivering real-time data visualization and enabling faster, informed decision-making.
- Conducted unit and integration testing using JUnit and Mockito, ensuring maintainable, high-quality code and reducing production defects.

Java Developer Intern

May 2018- Jun 2018

Schneider Electric India Pvt Ltd | Hyderabad, India

- Developed Java automation scripts to monitor starter assembly processes, improving workflow reliability and reducing manual errors.
- Reviewed and refined assembly procedures to ensure SOP compliance, minimizing deviations and streamlining operations.
- Applied Java-based corrective logic to inefficient workflows, enhancing assembly throughput and process consistency.
- Created reporting modules in Java to track production KPIs, enabling engineers to quickly identify bottlenecks and optimize performance.
- Documented automation scripts and operational procedures, facilitating faster onboarding and knowledge transfer for new interns.
- Collaborated with cross-functional engineers to implement real-time tracking modules, improving visibility and reducing oversight errors.

PROJECTS

Plot Management System

- Developed a real estate web application using Spring Boot and PostgreSQL, enabling secure property listings and efficient CRUD operations for multiple users.
- Integrated React.js frontend with JWT authentication, creating a responsive UI and enhancing user engagement.
- Implemented Elasticsearch-based search and filtering, delivering fast property searches and accurate real-time results.

Motel Management System

- Built Spring Boot microservices to handle bookings, check-in/out, and invoicing, reducing operational errors by 40%.
- Integrated Stripe API for secure payment processing, ensuring reliable financial transactions and real-time payment confirmations.
- Developed a React.js dashboard for motel staff, enhancing usability and simplifying management of room availability.

Autonomous Order Delivery using Webots

- Programmed Java and Python control algorithms for path planning, obstacle detection, and task scheduling, reducing delivery time by 20%.
- Simulated autonomous delivery robots in Webots environment, enabling real-time route optimization and performance testing.
- Integrated monitoring dashboards to visualize robot performance and provide actionable insights for system improvements.

EDUCATION

Master of Science in Applied Computer Science

Jan 2023- Aug 2024

Northwest Missouri State University | Maryville, MO

Bachelor of Technology in Information Technology

Sep 2015- May 2019

Bharat Institute of Engineering and Technology | Uttar Pradesh, IN
