

Rahul Macha

Full Stack Developer

Los Angeles, CA | +1 (603) 231-1557 | macharahul31@gmail.com | [LinkedIn](#)

SUMMARY

- Full Stack Developer with 5+ years of experience building scalable microservices, responsive React/Redux UIs, and cloud-native applications using Java, Spring Boot, Node.js, and TypeScript.
- Experienced in designing RESTful and GraphQL APIs, optimizing PostgreSQL/MySQL queries, and implementing microservices architectures to improve system reliability and reduce latency by up to 45%.
- Skilled in cloud platforms (AWS, GCP, Azure), Docker, Kubernetes, CI/CD automation, and serverless solutions, accelerating feature delivery and reducing downtime.
- Adept at test-driven development (JUnit, Jest, Cypress) and implementing secure authentication/authorization workflows (OAuth2, JWT, RBAC), reducing post-release bugs and security incidents.
- Strong collaborator in Agile teams, with experience mentoring junior developers, optimizing DevOps workflows, and integrating ML/NLP solutions to enhance user experience and drive measurable business impact.

WORK EXPERIENCE

Shopify, Los Angeles, CA

Software Engineer

Feb 2024 - Present

- Contributed to the development of responsive React and Redux merchant dashboard components, improving perceived performance by 20% and enhancing user experience for thousands of merchants.
- Assisted in building Java Spring Boot microservices with robust pagination, filtering, and validation layers, reducing CPU utilization by 18% and stabilizing operations during peak traffic.
- Optimized PostgreSQL and MySQL queries and implemented indexing strategies, decreasing database latency by 25% and enabling near real-time merchant analytics reporting.
- Supported migration from monolithic architecture to Dockerized microservices, increasing deployment frequency by 40% and minimizing downtime during feature launches.
- Implemented backend and API test frameworks using JUnit and Postman, boosting automated test coverage by 30% and reducing post-release issues by 20%.
- Deployed internal admin tools and monitoring pipelines on Google Cloud Platform (App Engine, Cloud SQL), reducing incident response time by 35%.
- Collaborated with cross-functional teams to integrate an NLP-powered chatbot into the merchant help center, decreasing support ticket volume by 22% and improving first response time.
- Contributed to the development of an ML-based recommendation widget in storefront interfaces, resulting in a 10–12% uplift in average order value from A/B testing.
- Streamlined logging, monitoring, and error tracing dashboards, reducing troubleshooting time by 50% and enabling faster resolution across merchant services.
- Actively participated in Agile ceremonies, including sprint planning, daily standups, and retrospectives, mentoring junior teammates and improving sprint delivery accuracy by 20%.
- Supported frontend performance optimization initiatives (code splitting, lazy loading) to improve Core Web Vitals and overall user experience.
- Assisted with CI/CD pipeline improvements for faster, more reliable deployments using GitHub Actions, Docker, and Kubernetes.

Accenture, India

Full Stack Developer

Aug 2018 - Aug 2022

- Developed scalable backend microservices using Spring Boot and Hibernate to handle over 1M daily API requests with improved fault tolerance and uptime.
- Built real-time data processing pipelines with Apache Kafka and RabbitMQ, increasing data flow reliability and reducing pipeline failures by 40%.
- Designed secure API integrations with OAuth2 and OpenID Connect, ensuring compliance with financial and healthcare security standards.
- Deployed containerized applications using Docker and Kubernetes, automating scaling and reducing production downtime by 27%.
- Optimized SQL (PostgreSQL, MySQL) and NoSQL (MongoDB) queries through indexing and caching, reducing average query latency by 45%.
- Developed automated testing frameworks using JUnit, Mockito, and Postman, achieving 90%+ coverage and reducing defect leakage by 35%.
- Collaborated with frontend teams to develop responsive React and TypeScript UIs, decreasing UI-related bug tickets by 30% and improving UX.
- Supported migration of monolithic systems to microservices architecture, enabling faster feature releases and more resilient services.
- Delivered production-grade services on Azure App Services and AKS, ensuring high availability, scalable cloud-native operations, and seamless integration.
- Participated in Agile ceremonies including sprint planning, backlog grooming, and code reviews, increasing team productivity and reducing feature cycle time by 20%.
- Assisted with monitoring and logging setup using ELK Stack and Azure Monitor, improving incident response and debugging efficiency.
- Mentored junior developers and supported knowledge-sharing sessions, strengthening team skill sets and reducing onboarding time.

EDUCATION

New England College, New Hampshire, US
Master of Science in Computer and Information Sciences

Aug 2022 - Mar 2024

SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React, Next.js, Node.js, Express, Java, Spring Boot, Django, GraphQL covering both frontend and backend development.

Frontend & UI: HTML5, CSS3 (Flexbox, Grid), component-based design, responsive layouts, cross-browser compatibility, modern bundlers (Webpack, Vite, Babel), Figma for design collaboration, performance optimizations (code splitting, Core Web Vitals).

Backend & Server-Side: RESTful API design, GraphQL, WebSockets (Socket.io), server-side rendering, microservices architecture, Redis caching, PostgreSQL and MySQL optimization, Flask, authentication/authorization workflows, JSON data interchange.

Databases & Caching: PostgreSQL, MySQL, MongoDB (NoSQL), Redis; skilled in SQL optimization, indexing, ACID transactions, data classification, choosing DB paradigms.

Cloud & DevOps: AWS (EKS, Lambda, RDS, CloudFormation), GCP (App Engine, Cloud SQL, GCS), Firebase, Docker, Kubernetes, Terraform, Ansible, Bash scripting, Linux administration, serverless architectures (Lambda or Cloud Functions), CI/CD pipelines (GitHub Actions, Jenkins).

Testing & QA: Unit, integration, and test-driven development using Jest, Mocha, JUnit, Cypress, Postman; experience with automated testing frameworks and maintaining regression coverage.

Security & Best Practices: OAuth 2.0, JWT, RBAC, OWASP secure coding, input validation, software security best practices, XSS or SQL injection prevention.

Version Control & Collaboration: Git, GitHub, GitLab, Agile (Scrum or Kanban), Jira, Confluence; effective teamwork, code reviews, cross-functional collaboration, and mentoring.

Soft Skills & Problem Solving: Critical thinking, advanced analytics, adaptability, entrepreneurial mindset, effective verbal and written communication, project management, collaboration, and time management for navigating complex and fast-changing environments.
