EDUCATION

Master of Science (MS) in Computer Science

Expected: May 2025

University of South Florida, FL, USA

Bachelor of Technology (B. Tech) in Computer Science

Jun 2023

Vellore Institute of Technology, Vellore, India

TECHNICAL SKILL

Languages: C, C++, Kotlin, Java, Python, JavaScript, HTML, CSS, Bash, Shell scripting

Libraries, Framework: SpringBoot, Bootstrap, JSON, Jetpack Compose, XML, MVC, MVVM, Android SDK, RESTful API, Coroutine, Retrofit, Version Control

Development Tools: Android Studio, AWS, Xcode, VS Code, Git, GitHub, Docker, Postman, Jira, Slack

Databases: SQLite, NOSql, Firebase, MongoDB, Room Database

Operating System: Windows, Linux, MacOS

PROFESSIONAL WORK EXPERIENCE

Android Developer

Apr 2022 - May 2023

TechXcess Solution, Surat, India

- Worked closely with multidisciplinary teams to design, implement, and test an Android application. Enhanced app performance by cutting crash rates by **40%** through optimized **Kotlin** coding practices and provided thorough documentation to streamline future debugging and maintenance efforts.
- Contributed significantly to UI design discussions, driving a 60% boost in user engagement. Also performed unit testing, debugging, and thorough code reviews, which improved application performance by 25%.
- Demonstrated strong **Agile** development skills by actively participating in daily stand-ups and sprint planning. Consistently delivered projects on schedule while maintaining high quality standards.
- Designed responsive and visually captivating user interfaces in adherence to Material Design guidelines, significantly enhancing the user experience.
- Expertly integrated **RESTful APIs**, handled **JSON** data, and optimized network requests using libraries like **Retrofit** and **OkHttp**.
- Leveraged Android **Jetpack components** and third-party libraries for robust development, ensuring compatibility across various Android devices.

ACADEMIC PROJECTS

SAMVAD - Chat App

- Developed a chat application for visually impaired users, adhering to the **MVVM architecture**, to ensure maintainability and scalability.
- Implemented key features including speech-to-text, text-to-speech, emergency calling, gesture-based navigation, and voice-guided app environment, enhancing accessibility and usability.
- Ensured **robust security** with fingerprint verification and encryption algorithms, safeguarding user data and privacy.
- Integrated Firebase as the backend **database** for **real-time data storage** and management, enabling seamless communication and location sharing during emergencies.
- Improved **notification** alerts to keep users informed and engaged, improving user experience. Also, Utilized Java and XML for frontend development, demonstrating proficiency in these technologies.

Smart Door Locking System

- Developed a **Physical model** of Smart Door Locking system using IoT(Internet of Things). This smart door locking system provides **Two Factor Authentication** for everyone. First, it will scan **RFID tag** which user has and after that, it verifies by passcode.
- Introduced Amazon cloud service **AWS** where the system logs all entries with user identification which can be accessed worldwide. Also, it can take care of frequent passcode fails and phishing attacks on the system.
- Used **Arduino** board for sensors for verifying identity and by using AWS system user can see log anywhere from the globe.

TimeSnap

- Created TimeSnap, offering a journey through the planet's evolving wildlife and history.
- Utilized **NASA world wind** for a globe view, integrating **Snapchat's creative kit** for augmented reality.
- Designed with **MVVM** architecture with **ROOM database** and cloud storage and **Fire- store**.
