PROFESSIONAL SUMMARY

Results-driven Senior iOS Developer with extensive experience in designing, developing, and optimizing mobile applications. Proven expertise in performance tuning, memory management, and network optimization using tools like Instruments and Xcode Profiler. Adept at collaborating with cross-functional teams to deliver high-quality, efficient, and responsive apps for high-stakes environments.

EXPERIENCE

HTC Global Services

March 2018 – Present

Senior Software Engineer

Chennai, IN

- Developed and maintained key iOS applications, including the Virtual Store app utilizing **SceneKit**, **SpriteKit** for an interactive 360 degree shopping experience.
- Designed and implemented **SiriKit** proof-of-concept projects to integrate voice-command functionalities.
- Proactively profiled application performance using Instruments and Xcode Profiler to identify bottlenecks, optimize memory usage, and enhance CPU efficiency.
- Built an EV mileage prediction model using **CoreML**, combining real-time car data with extensive CSV datasets.
- Led multiple feature enhancements including a Tip and Rate Shopper module for the Meijer app by transitioning architecture from **MVVM to Clean**, integrating in-app **Chatbot** and deep link navigation for improved user engagement.
- Collaborated closely with **Adobe** and other partners to overhaul **Push Notification** workflows ensuring robust local and remote testing.

PROJECTS

Meijer 🍷

March 2023 – Present

- **Feature Development:** Designed and implemented the "Tip and Rate Shopper" feature from scratch using SwiftUI for pre- and post-order phases (delivered mode orders), boosting revenue for Meijer and delivery partners.
- **Migration to SwiftUI:** Successfully migrated the entire project from UIKit to SwiftUI.
- **Swift Version Upgrade:** Upgraded the project from an older Swift version to the latest stable Swift Version.
- **Collaboration:** Worked with Backend Services for API integration and the UX team for Figma designs and updates.
- **Agile Methodology:** Contributed to Scrum ceremonies, including daily stand-ups, sprint planning, and retrospectives.
- **Architecture Migration:** Transitioned from MVVM to Clean/VIPER architecture for enhanced modularity and scalability.
- **Push Notification Modernization:** Upgraded legacy push notification services to the latest frameworks.
- **Concurrency Upgrade:** Migrated legacy completion handlers to async/await structured concurrency.
- **Chatbot Integration:** Integrated a chatbot feature using WebView for easy customer support.
- **Analytics Integration:** Added Firebase and Adobe Analytics to track feature performance and identify issues.
- **Production Support:** Resolved critical production issues and delivered hotfixes under tight deadlines.
- **Feature Flagging:** Managed batch-wise feature releases using LaunchDarkly.
- **SDK Development:** Built reusable internal iOS SDKs for authentication and analytics, reducing integration time for multiple apps.
- **Reactive Programming:** Used Combine for handling asynchronous operations, delegation, elsewhere.

- **Deep Linking Integration:** Implemented universal links and deep links to seamlessly route users from external sources directly into the Meijer app, enabling navigation to specific screens for an improved user experience.
- **CI/CD Integration:** Managed continuous integration and delivery pipelines using GitHub.
- **Best Practices:** Applied SOLID principles and design patterns for scalable, maintainable code.
- **Unit Testing:** Achieved over 80% unit test coverage with comprehensive test cases.
- **Legacy Code Refactoring and Optimization:** Improved performance and maintainability by modernizing legacy codebases
- **Documentation:** Documented features, architectural decisions, and code changes.
- **Knowledge Sharing:** Conducted peer knowledge-sharing sessions on SwiftUI, async/await patterns, and VIPER architecture.
- **Accessibility:** Ensured compliance with iOS Accessibility guidelines by implementing VoiceOver support, Dynamic Type scaling, and contrast optimizations, improving app usability for users with disabilities.
- **Mentoring:** Assisted junior developers with project structures, coding standards, and debugging techniques.
- **Code Cleanup:** Removed unused code using Periphery scripts and enforced formatting with SwiftFormat.
- **App Overview:** Meijer Retail Application Led development of enterprise-scale iOS retail application serving 2.5M+ monthly active users across 500+ stores, processing \$4B+ annual digital sales through 7M+ weekly transactions. Architected and implemented comprehensive analytics system integrating with 100+ vendors, managing 50M+ SKUs, and handling 3M+ daily API calls while maintaining 99.9% uptime and 4.8/5 App Store rating (240K+ reviews). Optimized performance resulting in 45% faster checkout time, 35% reduced cart abandonment, and 150% YoY growth in mobile orders, while ensuring PCI DSS compliance and zero security breaches. Pioneered Shop & Scan feature and mPerks loyalty integration, driving 75% increase in user engagement and 40% improvement in customer retention.

Skills Used: *Swift, SwiftUI, UIKit, LaunchDarkly, Firebase, Adobe Analytics, Figma, Miro, GitHub, Azure, Periphery, SwiftFormat, VIPER Architecture, Scrum, Agile, SOLID Principles, CI/CD, SPM, Tuist.*

Honeyspot 🍯

Feb 2022 – Feb 2023

- **Social Restaurant Discovery Platform:** Developed a feature-rich iOS application enabling users to discover and share favorite restaurants, Implemented location-based restaurant discovery with custom filtering and sorting algorithms, Built social networking features connecting food enthusiasts
- **Authentication & User Management:** Integrated multiple authentication methods (Facebook, Google, Twitter), Implemented secure user profile management, Built user preference and settings management system, Handled sensitive user data with proper encryption and security measures
- **Core Social Features:** Designed and implemented friend connection system, Built real-time notification system using OneSignal, Created social sharing mechanisms for restaurant recommendations, Developed user activity feeds and interaction features.
- **Media Management System:** Integrated AWS S3 for scalable media storage, Implemented efficient image caching using SDWebImage and Kingfisher, Built photo upload and management system with CZPhotoPickerController, Optimized media loading for better performance.
- **Backend Integration & Networking:** Implemented RESTful API integration using Alamofire, Built robust error handling and retry mechanisms, Created offline data persistence, Managed API response caching for improved performance.
- **Analytics & Performance Monitoring:** Integrated Firebase Analytics for user behavior tracking, Implemented Amplitude for advanced analytics, Set up Crashlytics for crash reporting and monitoring, Created custom event tracking system.
- **Third-Party Integrations:** Integrated social media SDKs (Facebook, Twitter), Implemented Branch for deep linking, Set up OneSignal for push notifications, Integrated Google Maps for location services
- **Data Management & Architecture:** Designed and implemented MVVM architecture, Created efficient data models and caching system, Built robust data persistence layer, Implemented memory management optimizations

- **Quality Assurance & Optimization:** Conducted thorough code reviews and documentation, Implemented unit tests for critical components, Performed UI/UX testing and optimization, Maintained code quality and followed iOS best practices, Optimized app size and performance

- **App Overview:** Architected and developed a high-performance iOS social platform using Swift, MVVM, and 15+ integrated SDKs (AWS, Firebase, Social APIs). Implemented complex features including real-time messaging, location-based discovery, and ML-based recommendations while managing 1M+ daily API requests with 99.9% success rate. Reduced crash rate to 0.3%, optimized memory usage by 45%, and achieved 78% user retention through robust architecture and efficient caching strategies.

Pinkerton

Jan 2020 – Feb 2022

- **Application Design & Architecture:** Designed and developed the application from scratch using the MVVM-Coordinator pattern, ensuring a modular and maintainable architecture.
- **Twilio SDK Integration:** Integrated Twilio for real-time chat, video calling functionality, Developed message history and media sharing features.
- **SOS Alert System:** Designed and implemented SOS alert functionality with GPS tracking, Created real-time notification system for emergency responses, Developed alert status monitoring and management dashboard
- **Google Maps & Places Integration:** Integrated Google Maps and Google Places APIs to facilitate real-time location tracking, monitoring, navigation, and place search functionalities, Created location-based alert system.
- **Timesheet & Expense Management:** Designed automated expense tracking and submission workflow, Implemented receipt capture and storage functionality and Integrated mileage tracking and expense approval system, Built comprehensive clock-in/clock-out system with geofencing, Implemented schedule management with conflict resolution, Developed time tracking analytics and reporting features
- **RESTful API Integration:** Integrated multiple RESTful APIs to ensure seamless communication between the app and backend services.
- **MSAL Authentication:** Implemented secure authentication and login functionality using Microsoft Authentication Library (MSAL).
- **Multimedia File Upload with BOB:** Developed a feature using BOB to upload multimedia files (e.g., expense receipts) via RESTful APIs.
- **Google Maps Optimization:** Optimized Google Maps to track the user's current location, updating at intervals based on movement speed and other conditions for efficient location sharing.
- **File Download & Storage:** Implemented functionality to download files and store them securely in the device's file system.
- **Push Notifications:** Integrated push notification services to alert agents of important updates, messages, and SOS alerts.
- **Data Synchronization:** Implemented offline data storage and sync capabilities, Developed efficient data caching mechanisms, Created robust error handling and recovery system.
- **Incident Reporting Module:** Created dynamic incident report generation system, Implemented multi-media attachment handling (photos, documents), Developed incident categorization and priority management
- **App Security:** Ensured app security with secure API communications, encrypted local storage, and authentication token management.
- **Performance Optimization:** Optimized app performance, reducing loading times and enhancing responsiveness through caching and efficient API handling.
- **Technical Architecture:** Utilized MVVM architecture for scalable code structure, Implemented modular design for easy maintenance, Created reusable UI components and utilities, Managed multiple environment configurations (Dev, QA, UAT, Prod)
- **Testing & Debugging:** Conducted rigorous testing, including unit and integration tests, to ensure app stability and performance.

SKILLS

- **Languages :** Swift(Expert), JavaScript, Core Java
- **Testing & Debugging:** Conducted rigorous testing, including unit and integration tests, to ensure app stability and performance.

- **iOS Development** : UIKit(Expert), SwiftUI, Combine, CoreData, CocoaPods, GCD, ARC, Swift Package Manager(SPM), Push Notifications, RxSwift, SDK Development
- **Programming Paradigms & Principles** : OOP, POP, SOLID Principles(Expert)
- **Performance Optimization** : Instruments, Xcode Profiler, Memory Management, CPU & Network Optimization, Multithreading & Concurrency
- **Architectures & Design** : MVC, MVVM (Expert), MVP, Clean Architecture (Intermediate), Design Patterns
- **Development Tools**: Xcode, Git, JIRA, Fastlane, TestFlight, Agile Methodology, Continuous Integration, CI/CD Automation (Fastlane, GitHub Actions), Azure
- **Frameworks**: CoreAnimation, MapKit, ARKit, CoreGraphics, Firebase, LaunchDarkly, Okta, OAuth
- **UI/UX**: Auto Layout, Storyboard, Figma
- **Testing & Debugging**: Unit Testing(Expert), UI Testing, Debugging, Instruments, XCTest(Expert), Snapshot Testing.
- **Analytics**: Google Analytics, Adobe Analytics, Fullstory, Dynatrace, Emarsys
- **Others** : RESTful APIs, GraphQL, Tuist, Miro, Accessibility, Circle CI

EDUCATION

PACE Institute of Technology & Sciences

Bachelor of Technology in Computer Science and Engineering

Sep 2014 – May 2018

Andhra Pradesh, IN
