SUMMARY

Software Engineer with around 4 years of experience building applications. Expert in frontend development using React.js, Next.js, and TypeScript, and backend development with Java, Spring Boot, Hibernate, Node.js, and GraphQL. Proficient in designing secure RESTful APIs and developing distributed microservices architectures. Skilled in deploying and scaling applications on AWS (EC2, S3, RDS, Lambda) and Azure (App Services, AKS, Azure SQL), using Docker and Kubernetes for automation and cloud reliability. Strong expertise in PostgreSQL, MySQL, MongoDB, and Redis, optimizing queries and implementing caching strategies. Integrated real-time data processing with Kafka and Spark for data-driven decisions. Strong knowledge in LLM frameworks such as Hugging Face Transformers, OpenAI GPT, and Google T5 to automate workflows and enhance application intelligence.

SKILLS

Frontend Development: React.js, Next.js, TypeScript, JavaScript (ES6+), Angular, Redux, HTML5, CSS3, Tailwind CSS, WebSockets
Backend & Frameworks: Java 17, Spring Boot, Spring MVC, Spring Data, Hibernate, Node.js, Express.js, GraphQL, Microservices Architecture, C#
Databases & Data Engineering: PostgreSQL, MySQL, MongoDB, Cassandra, Redis, SQL Optimization, Kafka, Apache Spark, Data Modeling
Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, API Gateway, CloudWatch), Azure (App Services, AKS, Azure SQL), Docker, Kubernetes, CI/CD Automation, Infrastructure as Code (Terraform, CloudFormation)
Security & Compliance: Spring Security, OAuth2, JWT, Role-Based Access Control (RBAC), Swagger/OpenAPI, HIPAA, GDPR Compliance
Monitoring & Observability: ELK Stack, Log Management, Application Performance Monitoring, Prometheus & Grafana
Testing & QA Tools: JUnit, Postman, SOAP UI, Drools, Drools Rule Engine, Cypress, Selenium, Unit & Integration Testing
Collaboration & Methodologies: Agile (Scrum/Kanban), Sprint Planning, Version Control (Git, GitHub, GitLab, Bitbucket), Jira, Confluence

PROFESSIONALEXPERIENCE

Goldman Sachs Jan 2025 – Present | New York
Software Developer II

- Developed and optimized high-performance trading algorithms using Java and Python, processing over 8,000 transactions per second, ensuring low- latency execution and accurate market data handling in real-time trading environments.
- Built and maintained real-time data pipelines with Apache Kafka for messaging and Apache Spark for stream processing, enabling analysis of 1 million+ financial events per day, supporting algorithmic trading and risk monitoring.
- Designed and implemented RESTful APIs using Spring Boot to enable secure and seamless integration between internal trading systems and external market data providers, handling 30+ API endpoints for multiple services efficiently.
- Integrated BERT and Transformer-based models to analyze and extract insights from financial reports, earnings call transcripts, and market news, processing thousands of documents daily to support faster investment decisions and risk assessment.
- Implemented GitLab CI/CD pipelines with automated testing, static code analysis, and deployment scripts, reducing integration and deployment errors from 15+ incidents per month to under 2 incidents, and improving overall code quality and delivery speed.

Mercedes Benz Research and Development Mar 2022 – Jan 2024 | India
Software Development Engineer

- Constructed Intelligent Park Pilot and Oversized Vehicle Navigation features in the Mercedes Me iOS app using Swift, Core Data, MapKit, and Core Location, enhancing driver assistance capabilities for over 1.2 million active users across multiple regions with improved accuracy and reliability.
- Embedded HERE Maps APIs and optimized navigation algorithms, reducing complex route computation times from 12 seconds to under 4 seconds, significantly improving real-time driving experience for urban and highway scenarios.
- Executed CI/CD pipelines with Jenkins, Git, and Fastlane, automating daily and weekly iOS build processes, reducing manual deployment efforts from 20+ hours per week to under 2 hours, and ensuring consistent build quality across multiple environments.
- Practiced Test-Driven Development (TDD) with XCTest framework, creating and maintaining 80+ unit and integration tests, resulting in highly robust and scalable code while minimizing regressions in mission-critical navigation and driver assistance modules.
- Led app releases across Asia-Pacific, Japan, and Korea, coordinating localization, automated UI testing, and staged rollout strategies, handling 10+ regional variants and language packs seamlessly, ensuring zero post-release incidents in production environments.
- Delivered POCs integrating Siri voice commands, 3D vehicle models, and Azure Blob Storage, processing real-time parking updates for over 500 vehicles concurrently, enhancing next-generation in-app interaction and supporting advanced vehicle telemetry features.
- Optimized real-time data streaming and caching mechanisms using Combine framework and Core Animation, reducing latency for live navigation and parking updates from 8 seconds to 2 seconds, improving overall driver experience and app responsiveness.
- Collaborated with cross-functional teams using Jira for task management, GitHub for version control, and Firebase Crashlytics for monitoring, improving debugging efficiency for 50+ critical app modules while ensuring timely resolution of high-priority issues in production.

Accenture Feb 2021 – Feb 2022 | India
Software Engineer

- Formed Spring Boot REST APIs with MySQL database integration to efficiently manage 10,000+ medical supplies, ensuring real-time updates, accurate tracking, and seamless synchronization across multiple hospital branches with legacy hospital management systems.
- Formulated and implemented interactive React dashboards with Chart.js, providing comprehensive visualization of inventory trends, low-stock alerts, and usage analytics, enabling administrators to make faster, data-driven operational and strategic decisions.
- Devised automated email and SMS notification services using Spring Scheduler and Twilio API, significantly reducing stock-out incidents and maintaining continuous, smooth medical operations across multiple hospital departments.
- Incorporated predictive analytics and demand forecasting using Java and Python, analyzing historical supply usage, seasonal trends, and reorder patterns to optimize inventory cycles, minimize wastage, and improve overall hospital supply chain efficiency.
- Enforced role-based access control, encrypted data storage, and detailed audit logging, securing sensitive inventory and supplier information while ensuring strict HIPAA compliance, regulatory adherence, and operational safety across all hospital branches.
- Applied CI/CD pipelines using Jenkins for automated builds, Docker for containerizing Spring Boot microservices, and Kubernetes for scalable, zero-downtime deployments, ensuring faster releases and consistent hospital environments.

PROJECTS

Distributed Key Value Store - Multi Consistency

- Established and implemented a highly fault-tolerant distributed key-value store capable of handling 50,000+ read/write operations per minute, ensuring consistent, reliable, and low-latency performance across multiple nodes.
- Established Paxos for linearizability and Quorum-based replication for multi-node consistency, efficiently detecting and resolving conflicts using Vector Clocks and Version Vectors across distributed clusters.
- Exposed comprehensive CRUD functionality via REST APIs, enabling seamless integration with frontend applications, automation workflows, and future scalable enterprise-grade systems.

EDUCATION

Master of Science in Computer Science
State University of New York at Buffalo

GPA: 3.8/4
