

Ravi Teja

teja6599@gmail.com

603-289-3434

Software Engineer

Professional Summary:

- Around 7 years of strong IT experience, extensively in areas of enterprise & web application development involving system architecture, design, development, and maintenance of enterprise level applications.
- Involved in Design, development and testing of web application and integration projects using Object Oriented technologies such as **Core Java, J2EE, JSP, JDBC, Spring Framework**.
- Experience in Spring Framework such as **Spring Batch, Spring DAO, Spring ORM, Spring JPA, Spring JDBC, Spring Boot and Micro-Services**.
- Experience in design and development of **Microservices** using Java, **spring Boot** using **Agile** methodology.
- Expertise in developing **GUI** using Web-Development technologies like **HTML, DOJO, JavaScript, CSS, HTML5, Node JS, Bootstrap, Spring boot, JSF and jQuery**.
- Extensive experience in design and development of J2EE applications using **Core Java, Java 8, Java Collections, Data Structures, Multithreading, JDBC, Servlets, JSP, EJB, AJAX, JMS Custom Tag Libraries, JSTL, XML and Web Services**.
- Proficient in deploying and managing scalable applications using **EC2** for compute resources, **EKS** for container orchestration, **AWS Lambda** for serverless computing, and **S3** for secure, high-availability storage solutions.
- Experienced in developing complex **SQL queries, procedures, Triggers, Packages and Views** in various databases such as **Oracle, Informix, SQL Server and My SQL**.
- Results-driven Data Engineer with hands-on experience in Big Data technologies like **Apache Hadoop, Apache Spark, GCP, SQL** delivering innovative data solutions and driving actionable insights.
- Designed, implemented, and optimized **Kafka-based messaging** systems for **real-time data streaming and event-driven architectures, ensuring high scalability, reliability, and low-latency data processing**.
- Expertise in using and implementing design patterns such as **Model-View-Control (MVC), Data Access Object (DAO), Service Locator Factory, Singleton & Business Delegate**.
- Expertise in **Kubernetes to set up, manage, and scale containerized applications**, organizing them into microservices to make deployments faster and more reliable across different cloud platforms.
- Experience in creating build scripts using **Maven and Gradle** tools.
- Extensive experience in implementation of the version control software **SVN, Git and Bitbucket**.
- Performed unit testing using **JUnit** and **Mockito** aiding test-driven Development in some scenarios.
- Experience in **Software Life Cycle Development (SDLC)** process which incorporates Requirement Gathering, Analysis, Developing, Testing and implementing life cycle utilizing approaches like **Agile, Scrum** and Test-Driven Development.
- Experienced in using **Splunk** and **New Relic** for monitoring and observability.
- Experience with **Agile** Software Development methodologies such as **Scrum, Kanban**.

Technical Skills:

Web Technologies	JavaScript, HTML5, CSS3, JQuery, AJAX, XHTML, JSP, JSTL, JSON, Bootstrap, Node.JS
Web Services	REST (JAX-RS, Apache CFX), SOAP (JAX-WS, WSDL, Apache AXIS)
Frameworks	Spring 3.0, Hibernate 3.0, JSF 2.0, Apache CXF, Spring Batch, Spring JPA
Web/Application Servers	Web Logic, JBoss, GlassFish, Apache Tomcat Server
Deployment Tools	Maven, Jenkins, CodeShip
Testing Tools	JUnit, JMeter, Jasmine, Log4j, postman

Education:

New England College, Henniker, NH

Master of Science, Computer Information Systems | GPA – 3.83

Professional Experience:

Client: Sears, IL

April 2021 – Now

Role: Software Engineer

Responsibilities:

- Involved in Requirements gathering, Analysis, Design, Development and Testing of application using **AGILE** methodology.
- Implemented batch processing solutions using **Spring Batch**, leveraging its powerful **job scheduling**, **transaction management**, and **chunk-oriented processing** capabilities to efficiently handle large datasets and improve system performance.
- Involved in developing **Spring JPA**, to manage relational data in java applications.
- Used **MySQL Triggers** and **procedures** to get the daily deltas and supply to the search team.
- Contributed to the DevOps to automate the build and deployment process using **Jenkins**, **shell scripting**, **python**, **AWS Lambda**, and **Cloud Formation Template**.
- Experience with **AWS EC2 instances**, **Elastic Beanstalk** and **S3**, to deploy and monitor the logs.
- Experiencing in developing inter-operable Web services using **Service Oriented Architecture**. **Web Service** includes technologies like **REST**, **SOAP**, **WSDL**, **XML**, **JAX-WS**.
- Used **GIT** to track and maintain the different versions of the project.
- Used **Postman** to test the **RESTful** API for HTTP requests such as GET, POST, and PUT.
- Used **JMeter** to measure performance and load testing.
- Experience with **a control-m** scheduler to view the Job details like predecessors, successors, and Job status.
- Experienced in developing complex **SQL queries**, **procedures**, **Triggers**, **Packages** and **Views** in various databases such as **Oracle**, **Informix**, **SQL Server** and **My SQL**.
- Optimized SQL database queries and utilized **MongoDB** for NoSQL solutions to improve data retrieval speeds
- Integrated **Node.js** with **Java** services to enable asynchronous communication, reducing latency in data processing and improving user experience for real-time applications.
- Demonstrating proficiency in handling large volumes of data through **batch processing** techniques.
- Developed shell scripts to automate the upload of data files into **Hadoop** partitioned tables, streamlining data ingestion and ensuring efficient data organization within the Hadoop ecosystem.
- Implemented and optimized **Apache Spark** applications using Java, enabling efficient distributed data processing and real-time analytics for large-scale datasets across multiple clusters
- implemented real-time data streaming and message queue systems to enable seamless, high-throughput communication between distributed services using **Apache Kafka**.
- Automated **Node.js** deployment pipelines alongside Java-based applications using Jenkins and GitLab CI, improving continuous integration and continuous delivery practices for faster and more reliable releases.
- Experience in search engines like **Apache SOLR**.
- Participated in **EDI transactions** between vendors for the electronic exchange of purchase orders, advance ship notices, invoices, and other business-related data.
- Worked closely with the external teams and pulled the **SPINI** files from vendors for price and inventory updates.
- Experienced in using **New Relic** for real-time monitoring, performance troubleshooting, and application optimization.
- Excellent communication, interpersonal and analytical skills, team player with independent working ability.

Environment: Java, JDK 1.8, Core Java, JIRA, RESTFUL web services, Spring MVC, Spring Batch, Spring JPA, ECS, EKS, AWS S3, AWS Lambda, Maven, Jenkins, JDBC, Informix, Oracle, MySQL, UNIX, Log4j, JUnit, GIT, SVN, Eclipse, DBeaver, control-m, Snowflake.

Client: Grainger, IL
Role: Software Engineer

July 2019– April 2021

Responsibilities:

- Involved in the developing the **Microservices** with the help of **spring boot, Spring Integration Framework**.
- Participate in Sprint Planning, sprint grooming sessions, daily scrum meetings and implementing the functionality through sprint tasks.
- Work closely with Business Analyst and Project Manager to understand, analyze user requirements and estimate the timelines.
- Translate user stories into production ready code using **JAVA/J2EE** technologies.
- Web Tier is developed using **Spring MVC** framework based on MVC architecture with Java Beans as a model, JSP as View and Dispatcher Servlet as a controller.
- Develop **RESTful APIs** with different controllers for product and cart pages that return response in JSON format.
- Experience on **Log4j** to print the logging, debugging, warning, info on the server console.
- Developed back-end logic with Core Java using technologies **including Collection Framework, Multi-Threading, Exception Handling, Generics and Annotation**.
- Jenkins used it for building, creating snapshots and deploying on servers.
- Participate in cross team code reviews. Unit testing developed functionality in local development environment to qualify build to move to QA environment.
- Work closely with QA team to resolve QA environment defects and production defects.
- Task tracking in Atlassian JIRA and documentation updates on Confluence.
- Design and developing **batch** processing applications using **Spring Batch framework**.
- Implementing batch jobs consisting of multiple steps, including **reading, processing, and writing** data.
- Experience with containerization technologies like **Docker** and container orchestration platforms like **Amazon ECS** or Kubernetes.
- Deploying Java applications as containers in AWS **Elastic Container Service**.
- Utilizing AWS **CloudWatch** for monitoring and alerting Java applications deployed on AWS.
- Involved in SVN version controls to check in/out files, etc. also responsible for branching, merging the branch to main using **Tortoise SVN** tool.
- Involved in creating tables and worked on **My SQL** to write Stored Procedures functions and packages for complex Inserts and updates in the database. And used Stored Procedures in the application.
- Creates **Junit** test cases for unit testing and integrated with **Mockito**.
- Involved in **Stored Procedures**, User Defined functions, Views and implemented the Error Handling in the Stored Procedures and SQL objects and modified already existing stored procedures, triggers, views, indexes depending on the requirement.

Environment: Java, JDK 1.8, Core Java, Google Cloud, JSON, XML, Clear case, JIRA, RESTFUL web services, Spring MVC, Spring IOC, JAX-RS, Collections, Maven, JDBC, DB2, Log4j, JUnit, JMock.

Client: OCLC, OH
Role: Software Developer

Nov 2018 – July 2019

Responsibilities:

- Experienced architecture, design and development of high traffic application built in **Java/J2EE** using MVC architecture integrating spring, Hibernate and Struts frameworks in SOA.
- Used spring as an application framework to build the Services layer and implemented its core modules such as Spring Core Container, Inversion of Control, Data Access and **MVC** and Used XML/java /annotation spring boot configurations.
- Implemented **ORM** (Object Relational Mapping) framework with Hibernate for mapping Java classes and database tables.
- Experience in modifying the existing Backend code for different levels of enhancements.
- Involved in J2EE patterns MVC, Dependency Injection (DI), Inversion of Control (IOC), Data Access Object (DAO), Business Delegate, Service Locator and Singleton for the enterprise application.
- Developed test cases and performed unit testing using **JUNIT** Test case.

- Created a Continuous Delivery process to include supporting building of **Docker** Images and publishing into a private repository
- Deployed web and enterprise applications on Jboss application server in a channel secure environment
- Developed different JavaBeans and helper classes to support Server-Side programs.
- Designing and implementing scalable, Restful, and micro services-based mobile back-end. The back end is written in Java using Spring Boot for simplicity and scalability.
- Experienced in coding Web Services with **JAX-WS** and **JAX-RS**. Used Apache Tomcat as application servers to handle the deployments of different applications.
- Utilized Maven and ANT for application builds and Jenkins for continuous Integration.
- Hands-on experience on elastic load-balancers (ELB) for different applications to provide high performance of applications.
- Worked closely with Testing team for issue fixing and coordinating test set up for testing
- Created detailed design document, use cases, sequence and class UML diagrams using Rational Rose.

Environment: Java 1.6, Spring 3.0, RESTful Web Services, hibernate 4.0, Java, J2EE, JSP, AJAX, HTML, Java Script, spring, Maven, spring boot, Hibernate, Eclipse, XML, XSD, JDK 1.5, JMS, Tomcat 5.0, Unix, Maven and SVN.

Client: Wesco, PA

March 2018- Nov 2018

Role: Java/J2EE Developer

Responsibilities:

- Involved in phases of Software Development Life Cycle, interface design, configuration of framework, QA and documentation, maintenance.
- Good experience in building multi-threaded Java server-side applications and frameworks.
- Used Spring IOC (Inversion of Control) to remove the object Dependencies across the application.
- Implemented Singleton, MVC, Data Transfer Objects and Data Access Objects design patterns.
- Extensive use of JDBC to communicate to the Database for storing and retrieval of information
- Involved in search team, using SOLR analyzed the existing fields and designed the schema.xml and solr config.xml.
- Worked in Apache SOLR development and administration.
- Responsible for promoting search results, facet searches, Boost queries and filter queries.
- Experience on Log4j to print the logging, debugging, warning, info on the server console.
- Used data modelling for creating a data model by applying formal data modelling techniques.
- Developed back-end logic with Core Java using technologies including Collection Framework, Multi-Threading, Exception Handling, Generics and Annotation.
- Experience in application servers like Tomcat locally and Web logic to host it on the Linux server.
- Used Maven to build, run and create JARs and WAR files among other uses.
- Enhanced user interfaces to enable input of additional personal information for the purpose of plan generation using CSS, HTML, HTML5, DOJO, JavaScript, AJAX.
- Experience in design and developing XML processing components for dynamic menus on the applications.
- Hands on experience in usage of Hibernate, object/relational-mapping (ORM) solution technique, to map data representation from MVC model and Oracle Relational Data Model with a SQL-based schema.
- Customized Restful Web Service using Spring Restful API, sending JSON format data packets between front-end and middle-tier controller.
- Designed JSP pages for Initial applications, Submissions and Maintenance Involved in implementing Message Driven Beans using JMS systems.
- Performed code review and unit tested the application using JUnit framework.
- Extensive experience with Agile Team Development and Test-Driven Development using JIRA.

Environment: Java, JDK 1.8, Core Java, Web Sphere Application Server, JSON, XML, Clear case, JIRA, RESTFUL web services, Spring MVC, Spring IOC, JAX-RS, Collections, Maven, JDBC, DB2, Log4j, Junit.
