About

Back-end focused software engineer with 4.5 years professional experience. Proficient in Java/Python as core languages but have also utilized others as necessary. Strong skills in local development, cloud computing practices, and CI/CD of enterprise level customer facing applications. My primary motivation is to learn and keep building software I am proud of.

Experience

Senior Associate in Software Engineering | Capital One (Feb 2022 - Nov 2024)

- Created and released new infrastructure for Card authorizations within the organization, responsible for approval/decline of nearly every Card authorization coming to the company. This is the backbone of profit for Card in Capital One.
- Subject matter expert (SME) for Card Controls, involving Card preferences, notifications and other features offered by Capital One. Every API involved here receives a range of 700-200 Transactions per second (TPS).
- Point of contact (POC) for Ruleset validation service, used to verify changes in Rulesets responsible for decisioning in Card. These can vary from decisioning due to suspicion of Fraud to decisioning due to Credit policy.

Fullstack Engineer in Development Branch | Perthera (Jan 2020- Feb 2022)

- Created a new Front End/Back end service for the organization's primary landing page. These products are what the physicians logging into the service mainly interacted with.
- Used customer feedback to implement improvements into the system, ranging from UI changes to back-end logic. These changes helped streamline the products and services offered by Perthera

Education

Computational Neuroscience, Bachelors of Science - College of William and Mary (2014-2018)

- Honors Thesis Distinction
- Magna Cum Laude
