ank7d24@gmail.com • +1 737-291-6130 • 12820,N Lamar Blvd, Apt #1134, Austin, TX

SUMMARY

- Over 13 years of experience as an Oracle Core DBA in Development, Testing, and Production Environments.
- Proficient in Oracle Architecture, Oracle Servers (10g/11g/12c/19c) Installation, and Administration.
- Skilled in MongoDB administration, including designing replica sets and multi-sharded clusters.
- Expertise in SSL setup in Oracle, MySQL, and MongoDB (X509).
- Extensive experience in Backup/Recovery, Oracle patching, Migrations, Upgrades, and Cloning (PDB/CDB).
- Proficient in Oracle tools like SQL*Plus, Export/Import, Data Pump, and Goldengate.
- Working knowledge in Linux, Solaris, and AIX.
- Experience in setting up and configuring MTLS/SSL for data security and configuring CMAN with TLS/SSL.
- Implemented Audit Vault and Database Firewall for audit event collection and reporting.
- Managed Oracle Key Vault for endpoint key management and production environment upgrades.

EXPERIENCE

*Oracle America Inc, **Principal Technical Support Engineer***

Jun 2023 - Sep 2025

- Take ownership of troubleshooting and solving complex technical issues, ensuring timely resolutions over DB security Products.
- Conduct thorough research to understand customer issues and follow up directly with customers.
- Collaborate with team members to facilitate effective solutions for customers.
- Act as the voice of the customer, maintaining ownership of complex issues.
- Providing Technical Support on Oracle Database Security Products like Generic DB Auditing, Data Masking, Roles & Privileges etc.
- Implemented Audit Vault and Database Firewall 20.13.
- Implemented OKV with Multi Master Cluster with Endpoints for RAC and Multitenant On-premise database.

*Tata Consultancy Services Ltd, **Oracle Core DBA in Development, Testing and Production Environments***

Dec 2017 - Jun 2023

- As a Database Administrator, I am responsible for the administration of all Oracle Databases at Apple (Non RAC and RAC)
- Upgraded 12.1/12.2 standalone and multitenant Database to 19c standalone database.
- Advanced Backup and Recovery using Oracle's RMAN software; used offline/online for recovery in a production environment.
- Data center Migration using expdp/impdp/Data Guard and Goldengate.
- Working with GoldenGateBigData adaptor for streaming data over topics created under a namespace.
- Strategic involvement with team for Server virtualization and the management of infrastructure.
- Mongo database administration, Mongo DB cluster build, shard clustering, migration of data with mongodump, and Mongo version upgrade.
- Configure MongoDB replica set and sharded clusters as per the application requirement.
- Worked on MongoDB BRS & Ops-Mgr setup and onboard replica sets & sharded clusters on to Ops-Mgr.
- Converted replicaset to sharded cluster because of data size growth and better query rate planning.
- Worked on Upgrade/migrations of replicaSet and Sharded cluster from 4.0 to 4.xx.
- In-depth knowledge of Ops Manager and Ops manager Upgrade.
- Knowledge about Authentication and Authorization and X509 authentication.
- Configured SSL key files to implement security across all mongod instances.
- Extensive knowledge of Mongo replication architecture and change stream.
- Extensive Knowledge about Range based sharding and Hash based sharding/ Indexing.
- Implemented Goldengate setup for Active-Active Replication between the Datacenter for High Availability.
- Switchover and Failover supported for planned maintenance or APP migration across data center with DG broker and manual.
- Data broker setup with FSFO and observer.
- Setup SSL/MTLS to ensure data security for end users.
- Data encryption with TDE and wallets.
- Working with SOX/PCI databases.
- Setup Fine grain Auditing to audit set of operation on objects by user.
- Enforce user level security policies via profiles.
- Mysql Database support for non-cluster setup; Master-slave replica build, mysql upgrade, Render issues with end users.
- Provisioning, configuring, and managing EC2 instances and related AWS services for database deployments.
- Installation, configuration, and maintenance of database software (e.g., Oracle, MySQL) on EC2 instances or managed services like RDS.

- Configuring and managing AWS networking components like VPCs, security groups, and network ACLs for database connectivity and security.
- Monitoring AWS resource utilization and performance using tools like Amazon CloudWatch.
- Regularly perform AMI rotation with secrets.

Birlasoft India Ltd, Oracle Database Administrator

Jul 2016 - Dec 2017

- Provided administrative support for Siebel CRM with Oracle in Unix environment.
- Providing DBA support to more than 500 Oracle Databases including Production/dev/UAT environments.
- Upgrading Oracle databases from 11g to 12c.
- Knowledge of RAC.
- Architecting the disaster recovery methodology, coordinating with different teams and performing the DR tests on scheduled basis.
- Performing database refresh activities using export/import, hot/cold backups & RMAN.
- Handling core tasks of incidents/problem/change management including RCAs.
- Performing production/non production health checks.
- Performing different maintenance activities like tablespace space management, mount points space management, capacity management and requesting extension of filesystem if required.
- Handling long running application jobs.
- Cloning databases using RMAN duplicate functionality.
- Configuring and managing physical standby databases.
- Establishing and maintaining backup and recovery policies and procedures using RMAN/Export-Import.
- Expertise on performing backups using BCV technology.
- Implementing and maintaining database security (creating and maintaining users and roles, assigning privileges etc)
- Implemented SSL/TDE on database for security.
- Performed database tuning using Oracle Enterprise Manager and Explain Plan.
- Installed, upgraded and patched Oracle software.

Teamware Solutions, Oracle Database Administrator

Oct 2015 - Jul 2016

- As a Database Administrator, I was responsible for administration of all Oracle Databases at Apple.
- Upgraded 11.2.0.4 standalone Database to 12c standalone database.
- Advanced Backup and Recovery using Oracle's RMAN software; used offline/online for recovery in a production environment via Korn shell scripting.
- Data center Migration using expdp/impdp/Data Guard.
- Strategic involvement with team for Server virtualization and manageability of infrastructure.
- Implemented Stream for Active-Active Replication between the Datacenter for High Availability.
- Currently helping team to use existing infrastructure to achieve Maximum benefit to reduce cost and maximum performance.
- Actively working with other teams for Server Consolidation & Database Consolidation.
- Changes were made dynamically whenever possible to fulfill high-availability requirements.
- Enforced need of regular data purging processes from production, design and development, to deployment.
- Implemented and maintained Oracle 11g Data Guard/standby databases for fail-over purposes.
- Propagation from primary to standby via automated scripts, and sometimes uses standby databases to immediately restore primary database.
- Experience with 'graceful' switchover and switchback between primary and standby databases.
- Replicated to a disaster recovery site for increased server manageability and availability.
- Participated in development of enterprise-wide security standard methodology, and ongoing deployment..
- Implementing and maintaining database security (create and maintain users, roles and assign privileges)
- Managed appropriate use of freespace within tablespaces, reclaimed space whenever possible. Reorganized tables and indexes within databases when needed.
- Monitored the production Oracle alert logs for database errors.

Datamatics, Associate Consultant

Jul 2015 - Oct 2015

Talent pool offshore

SREI BNP PARIBAS (Srei Equipment Finance Pvt Ltd), Sr. Executive - IT

Oct 2013 - Jul 2015

- Installing and Managing Oracle Binaries.
- Collect, diagnose database problems using ADDM, AWR report, Alert log, Trace files.
- Installing Oracle 11g r2 and related Oracle tools on Linux and Windows.
- Monitoring Database, Checking for Tablespace Availability, Resizing tablespace (increase and shrink).
- Ps Using utilities like exp/imp and expdp/impdp for back and moving data.

- Maintain live, local Database server.
- Maintaining database security (create and maintain users and roles, assign privileges)
- Configuration/Troubleshooting of tnsnames, listener setup.
- Oracle DB installation and Troubleshooting.
- Taking full, incremental & archive backups using Rman.
- Basic level of replication with oracle streams and dataguard.
- Clone database as per the business requirement.
- Troubleshoot performance bottlenecks.
- Shell scripting to automate the process.
- Sound knowledge of UNIX environment.
- Advice developer to optimize the sql for better performance of database.
- Migration of Microsoft Sql server 2008 to Oracle 11g r2.
- Shell Scripting to automate the process.
- Work with Oracle Support to resolve various issues.
- Creating various weekly/monthly database reports.
- Lead the migration of 11g r2 RAC from standard edition to enterprise edition (11.2.0.4).
- Knowledge of goldengate schema replication.

*Birlasoft India Ltd, **Oracle DBA***

Sep 2012 - Sep 2013

- Working for the optimization of loading and transformation scripts
- Database design and creation estimate size for table spaces, tables, redo log files, indexes, rollback segments and managing objects.
- Take backup of these databases on daily basis through scheduled cron jobs where taken via RMAN/hot backups as well as Oracle Exports and weekly physical backups.
- Monitoring the database using the Oracle Enterprise Manager and third party tools like Toad.
- Monitoring disk space, CPU and memory usage.
- Configuration of Oracle database initialization parameters.
- Knowledge of Shell Scripting.
- Installation of Oracle 10g/11g/12c on Windows/Linux platform.
- Worked in a migration project which involves migration of 9i database to 11g database.
- Space maintenance as per requirement for tablespace and ASM.
- Perform GUI installation of Oracle 9i/10g/11g and its client.
- Create and manage users and granting privileges with appropriate roles and levels of security.
- Refreshing Development and QA using export/import & datapump.
- Day to day database administration and monitoring and troubleshooting various ORA errors.
- Work with Oracle Support to resolve various issues.
- Generate various database related reports like ADDM, AWR, ASH, etc.
- Taking full, incremental & archive backups using Rman.
- Work on database cases opened through ticketing system.
- Work with offshore team and clients to help them in resolving various database issues.
- Achieved VOC from client.
- Creating various weekly/monthly database reports.
- Basic level of Performance trouble shooting.

EDUCATION

Amity University

*Bachelor • **Computer Application** • 2009 - 2012*

Bachelors of Computer Application

LICENSES & CERTIFICATIONS

Oracle Cloud infrastructure 2023 certified foundation associate

Oracle • 308867611OCIF2023CA • Issued Mar 2024

Oracle Certified Professional

Oracle • 308867611DB19COCP • Issued Feb 2024

SKILLS

Oracle Core and MongoDB DBA Professional • Database Administration • Oracle 9i • 10g • 11g • 12c • 19c • data guard • Goldengate • MongoDB
