EDUCATION

George Mason University, *Masters in Computer Science*

May 2024

Coursework: Applications of Data Mining, Analysis of Algorithms, Software Engineering for WWW, Component-Based Software Development, Computer Graphics

Bennett University, *B.Tech in Computer Science*

May 2021

TECHNICAL SKILLS

Programming Languages : Java, Python, SQL, TypeScript, JavaScript, HTML5, CSS3, Shell Scripting.

Frameworks :SpringBoot, React.js, JUnit, Mockito, Bootstrap, Tailwind CSS, REST APIs, Microservices.

Databases: MySQL, PostgreSQL, SQL Server, MongoDB, Amazon RDS.

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, CloudWatch), Terraform, Docker, Kubernetes, CI/CD Pipelines.

Tools and Collaborations : Git, Jira, Confluence, Agile/Scrum Methodologies, Code/Design Review, Cross-functional Collaboration, Windows, Linux, Unix

WORK EXPERIENCE

Software Engineer, *Goldman Sachs, SLC, USA*

August 2024 - Present

- Automated infra provisioning for serverless workloads by creating AWS Lambdas and API Gateway resources using Terraform IaC, cutting manual setup time by 60% and adopted TDD approaches for infra validation.
- Delivered cross-provider authentication implementing Java-based AWS Lambda functions to securely retrieve credentials from different providers enabling users to fetch credentials on-demand.
- Enhanced reliability of core platform services by adding user-based rate limiting and configurable retry mechanism for REST endpoints and Feign clients,ensuring consistent performance sustaining 2000+ peak requests.
- Accomplished release validations by building GitLab-triggered probers,that runs IaC checks, and automated the end-to-end workflow testing, cutting manual deployment effort by 60+ hours improving release reliability.
- Accomplished API throughput by 2 times by architecting a secure, high-performance microservices integration layers leveraging Spring Boot to streamline external-system connectivity
- Reduced report generation time 25% by re-architecting a modular React & Redux SPA with lazy loading and query-based filters/sort/pagination—improving time-to-insight and cutting support tickets.

Software Engineer, *Justdial, Bangalore, India*

March 2021 - August 2022

- Facilitated team collaboration in developing dashboards for team using Spring Boot, REST APIs, and JDBC to build scalable and efficient server-side applications for seamless data processing.
- Optimized SQL queries and stored procedures, reducing query execution time by 30% and improving real-time data exchange latency by 50ms.
- Coordinated and led cross-functional Agile teams, promoting collaborative and continuous improvement, increasing project efficiency by 20% ensuring timely completion of deliverables.
- Improved database performance by refining SQL queries and enhancing storage efficiency across MySQL and Mongo databases, utilizing JDBC for robust database connectivity and operations.
- Conducted code reviews and software testing, optimizing database queries and reducing API response time to enhance back-end system throughput by 25%.
- Increased test coverage from 70% to 90% using JUnit and Jenkins, enhancing CI/CD pipeline stability and deployment confidence improving deployment speed.

PROJECTS

Swiggy Food's Clone Application | JavaScript, ReactJS/Native, Redux, Node.js |[GitHub](#)

- Developed a dynamic React application with Firebase authentication supporting 1,000+ users, leveraging Context API and Redux for state management, and integrating a shopping cart feature to ensure secure, seamless transactions.
- Engineered Node.js APIs to fetch real-time data from 100+ restaurants, reducing API response times and improving page load speed by 2 seconds, while conducting Jest test cases to achieve 96% coverage, ensuring application reliability and performance.

Campus Connect: Feedback System | HTML5, CSS, SpringBoot, Docker, Kubernetes, Amazon RDS |[GitHub](#)

- Containerized a full-stack microservices application using Docker and Kubernetes, deploying it on AWS EC2. Integrated a Git CI/CD pipeline, significantly improving scalability and improving application performance.
- Increased operational speed to 2x times by implementing advanced query techniques that minimize database call times by 40% and improved efficiency by optimizing JPA/Hibernate mapping for Amazon RDS.
