

Americo Afonso

Back-End Software Engineer

Fort Lauderdale, Florida • [+1-645-201-3975](tel:+16452013975) • americo.quiml@hotmail.com • [linkedin.com/in/américo-afonso-8a1a9b105](https://www.linkedin.com/in/américo-afonso-8a1a9b105)

Experienced Back-End Software Engineer with a proven track record of successfully delivering high-impact projects, primarily with JavaScript and Java. Adept at implementing front-end and back-end systems, optimizing performance, and enhancing security. Passionate about driving innovation and creating scalable solutions. I've been delivering projects impacting over 50M users leveraging AWS, Azure, Oracle, SQL, Spring, and TypeScript, among other technologies.

WORK EXPERIENCE

Back-End Software Engineer

June 2024 – Present

Zup - Bank Itau, Brazil

I am currently in the role of Software Engineer, I have implemented new functionalities in several microservices cash flows for companies for more than 500 users simultaneously for web and mobile using tools as:

- Observability with Grafana, Prometheus, and AlertManager
- Overseeing metrics for speed and efficiency
- Bug fixes and new features for many customers

Full Stack Software Engineer

April 2023 – May 2024

Qintess - Bank Caixa, Brazil

Led the development of a pioneering platform for the pharmaceutical sector, streamlining operations for Brazilian pharmacies and reducing financial costs for both pharmacies and the Brazilian government.

- Spearheaded the inception and development of the application, including redesigning the company's web-based application from business model to architecture.
- Achieved a 10% performance improvement and enhanced security measures, resulting in a seamless experience for over 50 million users.

Back-End Software Engineer

July 2021 – March 2023

TQI, Brazil

Contributed to implementing new features and supporting electronic payment systems in the financial sector and a web-based application for a cargo transport insurance company.

- Played a key role in enhancing PagSeguro's payment integration, resolving issues promptly and positively impacting over 20 million users.
- Collaborated in developing the cargo transport insurance system for Pamcary, optimizing operations and reducing claims.

Back-End Software Engineer

December 2020 – July 2021

Everis-Santander, Brazil

Developed batch processes and microservices for financial solutions, maximizing positive impacts for the bank and end customers.

- Built and implemented new batches, addressing bugs and optimizing performance across various bank applications.
- Executive leadership recognized me for delivering challenging projects on time and within budget.

Full Stack Software Engineer

July 2020 – December 2020

Virtual Technology, Brazil

Managed multiple software projects concurrently, contributing to the entire software development lifecycle.

- Developed a microservice application for condominium ticket generation, ensuring efficient operations.
- Provided expertise in testing, updating, and suggesting improvements for existing software solutions.

Full Stack Software Engineer

August 2019 – July 2020

Axxiom, Brazil

Delivered software projects for the Research and Development (R&D) sector, supporting critical operational processes for energy companies.

- Designed a process management system for an energy company, resulting in approximately \$1 million in financial savings.
- Implemented a management system for preventive action hierarchy, converting fines into savings for clients.

Full Stack Software Engineer

June 2018 – July 2019

AvSystemGeo, Brazil

Contributed to developing a comprehensive management system for various software platforms, emphasizing software testing and enhancement.

- Participated in rewriting the legacy system to version 2.0, collaborating with a team of developers to implement improvements for end customers.

EDUCATION

Uniciv University, Brazil

Postgraduate Degree – Software Architecture (2023)

Centro Universitário UNA, Brazil

Bachelor of Engineering – Computer Science (2017)

SKILLS & OTHER

Data Visualization/Engineering: Splunk, New Relic, Splunk, Grafana, Looker (Experienced), Segment, Amplitude

Techniques: Clean Code, Design Patterns, Testing, Recommendation Engines, Customer Segmentation Analysis (Advanced)

Tools and Frameworks: JavaScript, TypeScript, Angular, Java, Spring Boot, Spring Batch, Qaurkus, Junit, Databases (MySQL, Postgres, Oracle, Informix, DB2), FlyWay, Docker, Git, Jenkins, CI/CD, Azure, AWS

Training: Java Specialist - ALGAWORKS | JavaScript - CJRM
