Professional Summary

I have a passion for data reporting technologies and Data ETL pipelines to build scalable and efficient solutions. I enjoy solving problems and love seeing my work in action

Work Experience

Senior Software Engineer

CFTC-Remote

July 2024 to Present

- Developed and deployed custom data processing programs on AWS SageMaker, enabling scalable analytics and automation across large datasets.
- Integrated SageMaker with AWS Redshift and S3, building efficient pipelines to extract, transform, and analyze up to 100's of millions of rows of data.
- Designed and implemented secure, cloud-native solutions.
- Automated data ingestion and transformation processes, improving reliability and reducing manual intervention for analytics teams.

Data Engineer

BriteCore-Springfield, MO

December 2018 to October 2023

- Starting as a full stack engineer on the support team I was able to gain experience through many products such as maintaining the core web app, automating reporting needs, patching stand-alone windows applications, and more.
- As a Data Engineer, I worked with Python, SQL, and AWS on the Data Pipeline. I was able to automate, develop, and deliver critical solutions to Large Data ETL and reporting products. I found my passion for data analytics through creating reports covering a variety of needs.
- Technologies I have been able to gain experience with are; Python, SQL, AWS services, BI Tools, QuickSight, Airflow, and more.
- Experience building data visualizations/reports with different sources. Integrating with many different libraries

Software Engineer

Knowledge Facilitation Group-Richmond, VA

May 2015 to August 2018

- Built tools and web applications to assist with day-to-day analyst tasks and improve efficiency
- Full stack experience with large database web applications with multiple pipelined scripts and responsive designs on the front end
- Presented ideas that created new applications for the company
- Built and maintained ETL SaaS platforms using Python
- Created a modern RESTful API interface for SLOA/Legacy Accounting systems

- Produced an ETL data surveillance platform, and algorithms to extract legacy financial accounting data, across various data analysis platforms

Junior App Developer/Intern

Wendell Wilson Consulting-Richmond, KY

May 2013 to May 2015

Education

Computer Science (Bachelors)

Eastern Kentucky University

Skills

- CSS
- Data analysis skills
- Databases
- ETL
- Pandas
- Web development
- Confluence
- Django
- Computer skills
- Linux
- Bash
- Scrum
- Back-end development
- CI/CD
- Requirements gathering
- GitHub
- SOAP
- Business intelligence
- Debugging
- APIs
- Software architecture
- Front-end development
- MySQL
- Software development
- SQL
- Windows
- Docker
- Software implementation

- Shell Scripting
- MVC
- RESTful API
- Microsoft Office
- Computer science
- Data management
- Data analytics
- Software troubleshooting
- Analytics
- AWS
- Python
- Application development
- Java
- Data Analysis
- REST
- Microsoft Excel
- Jira
- jQuery
- Mac OS
- Power BI
- Accounting
- Analysis skills
- SDLC
- OOP
- C#
- .NET
- PostgreSQL
- Data visualization
- Oracle
- Node.js
- XML
- Git
- Agile
- Communication skills
- Organizational skills
- SVN
- Software deployment
- Elasticsearch
- JavaScript
- Business analysis

- Web services
