

Devin Leonard

Kingston Springs, TN, | +1(865) 224 3339 | devincoleonard@gmail.com | <https://www.linkedin.com/in/devin-leonard-719528345>

Full-Stack Engineer with **12+ years** of experience in designing, developing, and optimising high-performance web applications. Adept at implementing modern tech stacks, enhancing code quality, and driving revenue growth. Strong expertise in **frontend and backend technologies, debugging, and testing**. Passionate about **AWS serverless architecture, SQL & NoSQL** databases, and scalable microservices. Proven ability to collaborate effectively and push technological boundaries to the next level.

PROFESSIONAL EXPERIENCE

Elsunstar

Senior Lead Engineer

Austin, TX

July 2019– Present

- Spearheaded the full development lifecycle **for tele-health platforms**, leveraging **JavaScript/TypeScript, React/ Redux Toolkit , Node/Express.js**, and cutting-edge UI patterns to elevate app visibility in the App Store; reached over 2 million users monthly.
- Delivered a scalable and user-centric UI built with **React** (including **React Hooks, Redux Toolkit**, and **Tailwind CSS**), translating **Figma** designs and utilizing **Storybook** to establish a cohesive experience and a reusable design system.
- Built **Chatbot** for searching the products using **OpenAI, Python/Django, React/Redux** and **MongoDB/NoSQL**. **Python** robust NLP libraries including **NLTK** and **SpaCy** were used to implement intent parsing, entity extraction and response formulation.
- Created an **Elasticsearch** infrastructure for the management of logs and business metrics using **AWS Elasticsearch, SNS, JavaScript, Lambda**, and **Kibana**.
- Improved tele-health real-time Communication System by integrating **Vue/Vuex, WebRTC** with **SFU** architecture for UI and **C#/ASP.Net** for server, optimizing **video call** reliability and quality on mobile and web apps, especially under fluctuating network conditions to setup enhanced user experience by reducing latency and ensuring consistent video performance.
- Directed the migration from a monolithic to a microservices architecture using **Node/Express.js, AWS (EC2, API Gateway, S3), Docker**, and **Kubernetes**, achieving enhanced scalability, resilience, and modular deployment for key services like payment processing and data analysis.
- Managed backend services with **Node / Express.js**, creating **RESTful APIs** to sync healthcare data between the EHR system and third-party providers, with **MongoDB** for storage, **Redis** for caching.
- Led the design and implementation of an **OAuth** based authentication with **JWT** token and **AWS IAM** powered authorization framework for the organization's mission-critical **EHR** system, which secures access to over 3 million patient records.
- Deployed **AWS** infrastructure using **CloudFormation**, provisioning resources like **EC2, RDS**, and **S3** to support medical product image storage.
- Leveraged **MySQL** for structured data storage and **Redis** for caching, optimizing high-performance, real-time data retrieval in patient management systems to maintain fast response times in essential healthcare workflows.
- Integrated **RabbitMQ** for real-time data streaming to handle large-scale patient data ingestion, enabling asynchronous tasks like **appointment scheduling** and **medication management** in the system.
- Engineered containerized solutions using **Docker** and **Kubernetes**, deploying microservices to **AWS ECS** and **EKS**, which improved system scalability and reduced deployment times.
- Designed and executed comprehensive testing strategies using **Jest** and **Cypress**, achieving code coverage and reducing the number of production bugs.
- Worked within an **Agile team** using **JIRA** for sprint planning, tracking, and retrospectives, with daily standups to discuss progress and address blockers. Additionally, used **Confluence** for documentation, contributing to efficient collaboration and timely, high-quality feature delivery.

Devwarts

Full-Stack Developer

Austin, TX

April,2013 - June,2019

- Developed and maintained a comprehensive fintech platform using the MERN stack (**MongoDB, Express.js, React, Node.js**), focusing on high-performance, secure, and user-friendly financial services for online payments, personal finance management, and customer engagement.
- Utilized **CSS-in-JS** libraries like styled-components and **Tailwind CSS** to create responsive modular components that adapt to various screen sizes for seamless desktop and mobile viewing.
- Employed **Redux** and **React Context** for state management to filter and sort large datasets, allowing users to efficiently navigate transactions, portfolio holdings, and expense categories.

- Used **Formik** and **Yup** for complex form validation to ensure valid bank details, credit card numbers, and transaction limits.
- Implemented loading indicators and transitions using libraries like **React Transition Group** to improve **UX** and make the users aware of the background process when data is being fetched.
- Utilized **Chart.js** with **React** to create interactive **charts** and **graphs**, enabling users to visualize their income, expenses, and budgets over time, thus facilitating better financial decision-making and enhancing user engagement with the budgeting tool.
- Designed and implemented a **PCI-DSS-compliant** payment processing system by integrating **Stripe** and **PayPal APIs** with **Node/Express.js** backend, ensuring secure, encrypted transaction handling and efficient data storage for real-time transaction processing and management of recurring payments.
- Implemented secure, token-based user authentication in **Node/Express.js** using **JWT**, along with **bcrypt** for hashing passwords, ensuring robust protection of user credentials and enhancing overall application security.
- Implemented real-time transaction monitoring system by using **WebSocket** connections in **Go** on the **Angular** frontend, ensuring users received instant notifications and enhancing the overall **responsiveness** and **user experience** of the application.
- Integrate market data APIs such as **Alpha Vantage** to fetch real-time asset prices and update portfolios in **MongoDB**.
- Implemented **open banking APIs** such as **Plaid API** in **Java/Spring** to connect and retrieve user **account** data across **different banks**.
- Integrated notification services, such as **Firebase Cloud Messaging**, with **Node/Express.js** to alert users when they approach budget limits, enhancing user engagement and promoting proactive financial management through timely, actionable insights.
- Developed and deployed cloud-based solutions on **AWS**, using **EC2** instances for scalable compute resources and **Lambda** for serverless functions, optimizing resource utilization and ensuring high availability and cost-efficiency across applications.
- Leveraged **GitLab's capabilities** for version control, continuous integration, and team collaboration, streamlining code review processes, managing merge requests efficiently, and keeping a tight handle on issue tracking to maximize team productivity.
- Executed comprehensive testing, utilizing **E2E** testing, **Postman** for API testing, and **OWASP ZAP** for security testing, ensuring robust, secure, and compliant applications.
- Designed and managed **CI/CD** pipelines using **Jenkins** and **Kubernetes** to ensure secure, compliant, and reliable application delivery.
- Actively **collaborate** with business analysts, project managers, QA team, and backend team to ensure delivery of **optimal web solutions** that align with company vision and user needs.

TECHNICAL SKILLS

- **Frontend Development:** JavaScript/TypeScript, React/Redux, Vue (Vue2, Vue3)/Vuex, Angular, HTML/CSS, SCSS, Sass, Less, Tailwind CSS, MUI, AntD, Semantic UI, Mobx, Context API, Bootstrap, Figma, Responsive Design, UI/UX Design
- **Backend Development:** Node/Express, Next.js, Python/Django, Python/Flask, Python/FastAPI, Go, C#/ASP.NET, Ruby/Ruby on Rails, Java/Spring, PHP/Laravel
- **Mobile Development:** React Native, Flutter, Dart, Android
- **Database Management:** SQL(MySQL, SQLite, PostgreSQL, Oracle, MariaDB, Amazon Aurora), NoSQL (MongoDB, DynamoDB, Redis, Cassandra)
- **Cloud Services:** Amazon Web Service(AWS), Google Cloud Platform (GCP), Microsoft Azure, Firebase
- **DevOps & CI/CD:** Version Control (Git), Build Tools, Package Managers, Jenkins, Docker, Kubernetes
- **Testing & Quality Assurance:** Jest, Mocha, Chai, Cypress, Selenium, React Testing Library, Enzyme
- **Web Performance & Accessibility:** Lighthouse, WebPageTest, Chrome DevTools
- **Additional Tools:** Prettier, ESLint, Nx, Storybook

EDUCATION

University of Tennessee

Bachelor of Science: Computer Science

2009-2012
