PROFILE

Results-driven and accomplished Software Quality Assurance Manager with almost ten years of experience in QA; with over six years directing the full life-cycle of software delivery. I have a proven track record of leading high-performing QA teams and spearheading quality initiatives that delivered a significant reduction in production software defects. Adept at architecting and implementing robust test strategies and modern automation frameworks, including Playwright with full CI/CD support. I am a collaborative partner to cross-functional teams, leveraging platforms like Jira to optimize processes and ensure the delivery of exceptional user experiences.

SKILLS

QA & Test Automation

- **Automation Frameworks:** Playwright, Selenium, Cucumber, BrowserStack, Storybook
- **Languages & Scripting:** JavaScript, Java, C#, Gherkin, Bash, PowerShell
- **Performance Testing:** Custom JavaScript framework development and integration with Prometheus and Grafana
- **Mobile & Web Testing:** Experience with mobile web, desktop web, native mobile applications and API
- **Test Case Management:** Zephyr, TestRail, Xray

DevOps & CI/CD

- **CI/CD Tools:** GitLab, Jenkins
- **Version Control:** Git, SVN
- **Processes:** Continuous Integration/Continuous Delivery (CI/CD), Branch Strategy, Peer Review

Project Management & Collaboration

- **Agile & ALM Tools:** Jira and Confluence (Administration & Process Configuration)
- **CRM & Analytics Platforms:** Salesforce, Figma, Pendo

Leadership & Strategy

- **Management:** Team Leadership & Mentorship, Onboarding & Training, Interviewing, Professional Development
- **Strategy & Process:** Quality Assurance Strategy, Process Optimization, Defect Reduction, SDLC Management, Agile Methodologies

EMPLOYMENT HISTORY

Manager of Software Quality Assurance, Jira Administrator , Geoforce

Jun 2022 — Aug 2025

Quality Assurance & Process Improvement

- Reduced production software defects by 97% and ensured ongoing resolution within 90 days through the development and implementation of a comprehensive quality assurance program.
- Architected and implemented comprehensive test strategies for mobile web, desktop web, and native mobile applications, including the selection of appropriate frameworks and tools.
- Partnered with cross-functional teams to reconfigure Jira projects and revamp processes, enabling a continuous production release model.
- Defined and tracked key quality metrics and KPIs, providing leadership with data-driven insights into the impact of quality assurance practices.

Leadership & Training

- Led and mentored a team of 5-8 quality assurance engineers, fostering professional development and ensuring the delivery of outstanding software applications throughout the SDLC.
- Spearheaded the migration and training of acquired companies on Jira, Confluence, and Salesforce to standardize quality and software development practices.
- Facilitated training sessions for QA engineers on essential development practices, including Git, branch strategy, peer review, and coding standards.
- Streamlined on-boarding for new hires, collaborating with IT and Customer Success to cover internal processes and key platforms.

Technical Execution & Collaboration

- Developed and implemented a performance testing framework using JavaScript, with key metrics integrated into Grafana for real-time analysis and reporting.
- Engineered and deployed an automated testing framework using the Playwright framework, with full CI/CD support, which significantly increased testing efficiency and reduced defects.
- Collaborated with software engineering teams to shift testing left in the software development life-cycle, incorporating new types of testing and aligning with the test pyramid model.
- Led DevOps collaboration to implement a PII data scrubbing process within the database synchronization, ensuring customer data privacy and security.

QA Manager, Engineering, OakNorth

Aug 2021 — Jul 2022

Collaborated with engineering squads to assume QA ownership, leading to modifications in sprint planning estimates, Jira transitions, and acceptance criteria. Implemented automated testing using Testsigma for both customer and demo stacks, resulting in improved efficiency and accuracy. Played a significant role in the testing of tenant creation and deployment, ensuring seamless functionality and performance. Took charge of all customer testing and feature flag enablement/disablement, guaranteeing top-notch quality and a smooth user experience. Worked closely with multiple software developers to seamlessly integrate end-to-end testing using Gherkin language. Streamlined the release process, resulting in a reduction in quality issues and a shift of testing towards the earlier stages of development.

Quality Engineer, Storable

Mar 2020 — Aug 2021

Established and fulfilled the role of QA Facilitator for bi-weekly and quarterly releases, overseeing the testing process. Designed a Confluence page to enhance the onboarding experience for new QA Engineers, supplying more detailed and effective information. Prepared regression spreadsheets, verified defects, and managed issues for each release. Collaborated closely with developer and QA teams to develop a production testing validation plan and estimated completion time. Provided comprehensive issue summaries, updates, and testing status reports to the release channel. Conducted interviews for QA and developer positions, ensuring the selection of top-level candidates. Created comprehensive test profiles for all supported products. Contributed to Big Room Planning (BRP) as a valuable member of the Quality Assurance team. Collaborated with DevOps to check correct deployment of releases. Sized and validated bug fixes and new features on local, develop and release branches.

Senior QA Engineer, Abrigo

Jan 2019 — Mar 2020

Identified and implemented quality assurance process improvements to increase efficiency of Product Managers in test plan creation and review. Collaborated with Senior Software Developers to implement integration testing, increasing test coverage and catching defects earlier in the software development cycle. Orchestrated the transition of the QA Team from SVN to Git, aligning with industry standards and streamlining the code review process. Mentored and managed junior team members, conducting weekly one-on-one meetings, identifying software development skill strengths, and coordinating development tasks with Software Development Managers. Acted as Release Manager when needed, ensuring the quality of all products and enhancements, confirming completion of product verification, coordinating builds with DevOps Team, and providing final sign off for production release. Played an integral role in the restructuring of Technical Support, involving the QA Team in providing direct feedback on product defects to quickly resolve customer issues and decrease customer-found defects.

Software Quality Assurance Analyst, Abrigo

Dec 2017 — Jan 2019

Conducted interviews to recruit QA resources, ensuring effective support for company products. Played a key role in establishing and shaping the Quality Assurance team. Oversaw the onboarding and mentoring of 3 interns, providing training in test case writing, automation script creation, and internal tools. Facilitated the transition of interns to software development, assigning development tasks and serving as a valuable resource. Organized and led a comprehensive 6-week "Automation Bootcamp" to train team members in automation script writing using Selenium and C#, resulting in increased automated test coverage for various teams. Managed quality assurance for a wide range of company products, achieving 100% manual test case coverage within the first 90 days. Acted as a peer reviewer for automation script code, consistently highlighting excellent code standards and providing feedback for code improvements or corrections as needed.

Software Engineer I, Citrix Systems, Inc

Jan 2016 — Oct 2017

Managed the resolution of software bugs by conducting self-assessment and development, resulting in improved software component quality and enhancement for Citrix ShareFile Sync for Windows. Utilized MSTest and Coded UI to significantly increase automation test coverage by 75%, resulting in enhanced automated test case efficiency and faster delivery.

Conducted progressive analysis of product logs to diagnose client use case concerns, taking appropriate measures to resolve issues and prevent recurrence.

Optimized release to test Jenkins deployment procedures, leading to improved product delivery and quality. Actively participated in tools software development (C#) and release cycle, including creative design, code development, reviews, troubleshooting and debugging, installation, software maintenance, and testing. Collaborated cross-functionally with timely and consistent communication, effectively improving team productivity in daily manual testing cycles. Ensured quality test execution to validate software functionality, accuracy, and performance. Developed and implemented new features to provide customer-based software solutions, getting together with Technical Support & Development teams for QA analysis. Applied Agile testing methodologies based on environmental aspects, architecture, and interdependencies for product automation testing.

EDUCATION

Bachelor of Science, University of North Carolina at Greensboro

Applied Mathematics
