

Uday Kanth Reddy Kancharla

Sr.Java Full Stack Developer

udaykc013@gmail.com

3056107681

Only C2C | Immediately Available | Open to relocation anywhere in the USA

Professional Summary:

- **Java Full Stack Developer** with over **10+** years of experience in designing, developing, and implementing Software Solutions.
- Exhibited proficiency in overseeing the Software Development Life Cycle (**SDLC**) to deliver top-tier software projects that drive business objectives and promote technological innovation, utilizing **Agile/Scrum** methodologies.
- Expertise in **Banking, Insurance, and E-commerce**. Demonstrates adaptability and effectively applies technology solutions to address diverse business challenges.
- Extensively engaged with Java functionalities, including **Stream API, Date and Time API, Lambda Expressions, Functional Interfaces, Predicates, Functions, and Default methods**.
- Developed and deployed Web APIs using **Node.js**, hosting them on multiple load-balanced instances to ensure high availability and scalability.
- Utilized the **Express** framework to configure middleware for handling HTTP requests in a **Node.js** environment.
- Experienced with various Spring modules, including **Spring Core, Spring MVC, Spring Boot, Spring Data, Spring AOP, Spring Mail, Spring Batch, Spring Cloud, and Spring Security**.
- Demonstrated adeptness in harnessing **Angular's** extensive functionalities, encompassing data binding methods like **interpolation, property binding, event binding, and two-way data binding**, as well as implementing **diverse Angular directives, including component and structural directives**.
- Implemented **Node.js** asynchronous programming techniques, including **callbacks, Promises, and async/await**, to efficiently manage **I/O-bound** tasks and enhance application performance.
- Implemented **Node.js** Stream API to manage large data streams effectively, facilitating real-time data processing.
- Proficient in using **React** Router for seamless navigation, leveraging **Context API** and **Redux** for robust state management, and implementing **Hooks** to enhance **functional components**.
- Implemented database modeling, designing, and developing **PL/SQL** stored procedures and packages across a range of relational databases including **Oracle, MySQL, SQL Server**, as well as in **MongoDB**.
- Bring expertise in automation, build/release engineering, and software development, with proficiency in cloud computing platforms such as Amazon Web Services (**AWS**), **Azure**, and Google Cloud Platform (**GCP**).
- Proficient in constructing resilient and scalable applications, with expertise in **Microservices architecture**. Utilized **Amazon API Gateway** and **Hystrix** for implementing Circuit Breaker functionality.
- Leveraged expertise in these **Spring modules** to develop robust, scalable enterprise applications with streamlined workflows and enhanced security.
- Proficient in crafting and deploying extensive enterprise solutions through **Spring Boot** and **Web Services**, adept at both **SOAP and RESTful API development**.
- Implemented robust security measures for **REST APIs** within the **Spring Security framework**, establishing an **OAuth2** token-based authorization scheme.
- Demonstrated expertise in utilizing **Angular's** functionalities, including **data binding** methods such as **interpolation, property binding, event binding, and two-way data binding**.
- Implemented various **Angular directives**, including **component** and **structural** directives, to enhance application development.
- Skilled in developing dynamic web applications with **React**, utilizing the **virtual DOM** to optimize **UI** rendering and handling application state efficiently.
- Ensured application responsiveness and scalability through effective utilization of **Reactive** and **asynchronous programming** techniques in Java.

- Proficient in applying **Reactive** and **asynchronous programming** techniques in **Java** to design, develop, and maintain applications adept at managing concurrent and asynchronous operations.
- Experienced in working with both Relational Database Management Systems (RDBMS) such as **MySQL and Oracle**, as well as **NoSQL** databases including **MongoDB and Cassandra**.
- Possessing extensive knowledge and in-depth understanding of AWS Cloud technologies, including **IAM, EC2, S3, VPC, RDS, SQS, SNS, CloudWatch, ECS, EKS, KMS, Lambda, DynamoDB, CodeBuild, CodeDeploy, and CodePipeline**.
- Effectively managed and optimized various **Azure cloud services**, including **Azure Virtual Machines (VMs), Azure Virtual Network, Azure Active Directory (AD), Azure Application Gateway, Blob Storage, and Azure Policy**.
- Skilled in strategic planning and hands-on implementation of **AWS** services to ensure effective utilization and operational excellence in cloud environments.
- Possess extensive experience in developing **Microservices** with **Spring Boot**, implementing microservices architecture according to the **12-Factor principles** to ensure scalability, resilience, and optimal performance, thereby enhancing deployment flexibility.
- Experienced in deploying **Amazon API Gateways, Circuit Breaker mechanisms, Event Sourcing, SAGA, CQRS**, and other microservices design patterns to enhance system performance, scalability, and fault tolerance.
- Considerable expertise in implementing web services, including **SOAP** through **WSDL and JAX-WS**, and **REST** using **Spring Boot, Apache CXF, JAX-RS, and Jersey frameworks**.
- Demonstrated expertise in **code refactoring** and exceptional **client interaction abilities**. Proven track record of thriving both **independently and collaboratively** within **team** environments.
- Extensive experience with diverse message broker systems, encompassing **JMS, RabbitMQ, ActiveMQ, and Kafka**.
- Proficient in employing version control systems such as **SVN, CVS, and Git**, as well as project tracking tools like **JIRA**. Skilled in containerizing Java applications using **Docker** for consistent deployment practices.
- Leveraged image files with JavaScript and developed backend services using **Node.js** and **MongoDB on AWS**.
- Experienced in Continuous Integration utilizing **Jenkins and GitLab CI/CD** pipelines to facilitate seamless build and deployment operations.
- Implemented stateless authentication using **JSON Web Tokens (JWT)** and established **Bearer Token** authentication mechanisms.
- Experience in developing professional Single Page Applications (SPAs) using **Angular** and **React** frameworks.
- Proficient in employing **Angular** for front-end development, maximizing the efficiency of TypeScript.
- Configured and maintained various web and application servers, including **Apache Tomcat, JBoss and WebLogic**.
- Extensive experience in providing **production and UAT support**, as well as a robust background in working within a distributed delivery model, encompassing both **onshore and offshore operations**.
- Significant proficiency in utilizing **Object Relational Mapping (ORM)** tools such as **Hibernate and Spring Data JPA**. Extensive experience with the **Spring Framework, including Spring MVC and Spring JDBC**.
- Skilled in utilizing build automation tools such as **Gradle, Maven, and Ant** for facilitating builds and deployments across diverse environments.
- Utilized IDEs extensively, including **Eclipse, IntelliJ, Spring Tool Suite, Visual Code, NetBeans**.

Technical Skills:

Programming Languages	Java,J2EE, PLSQL ,Typescript, Python
Java/J2EE Technologies	Servlets, EJB, JPA, JDBC, JSP, JSTL, JNDI.
Web Technologies	HTML, CSS, JavaScript, Bootstrap, Angular, Node.js, React , React Native, Express
Frameworks	Spring core, Spring Boot, Spring MVC, Spring Data JPA, JPA, Spring AOP, Security, Spring mail Cloud, Spring Batch, SOAP, RESTful, Web Services (JAX-RS) Microservices
Messaging Services	Microservices with Kafka, RabbitMQ, ActiveMQ
ORM	Hibernate ORM, JPA.
Databases	SQL Server, Oracle, PostgreSQL, MySQL, MongoDB, Cassandra, AWS DynamoDB,

Build Tools	Maven and Gradle
CI/CD Tools	GitHub, Jenkins, Docker, Kubernetes.
Operating Systems	Windows, Mac, Linux.
Web Servers	Tomcat, Web Logic, WebSphere
Cloud Environment	AWS, Azure, GCP, Netflix Eureka, Kubernetes.
IDEs	Eclipse, IntelliJ Idea, Spring Tool Suite, Visual Studio Code
Development Tools	SQL Developer, Putty.
Testing Frameworks	JUnit, Mockito
Version Control Tools	Git, Bitbucket, SVN, CVS
Methodologies	Agile and Waterfall

Client: FedEx, Memphis, TN

Feb 2024 - Till Date

Role: Sr. Java Full Stack Developer

Responsibilities:

- Design, develop, and maintain scalable web applications using Java (Spring Boot) for backend and Angular/React for frontend.
- Implement RESTful APIs and microservices architecture to support
- Optimize application performance for high-traffic environments.
- Cloud & DevOps Integration:
- Deploy applications on AWS/Azure cloud platforms using Docker, Kubernetes, and CI/CD pipelines (Jenkins/GitHub Actions).
- Implement serverless computing where necessary for improving efficiency.
- Implemented Java features extensively, including **lambda expressions**, parallel operations on **collections**, and **multithreading**, to implement efficient sorting techniques.
- Utilized a range of J2EE design patterns, including **DTO**, **DAO**, **Business Delegate**, **Service Locator**, **Session Facade**, **Singleton**, and **Factory** patterns, in conjunction with **Hibernate ORM** for streamlined application development.
- Implemented **Java EE** components integrating **Spring MVC**, **Spring IOC**, **Spring Batch**, **Spring Security**. Played a key role in designing robust applications leveraging **Spring**, **Hibernate**, and **Restful** Web Services to enhance efficiency and functionality.
- Implemented **Oracle AWR** reports and SQL tuning tools to conduct comprehensive performance analysis.
- Utilized **Spring Cloud Azure Core**, **Spring Cloud Azure Context**, and **Spring Cloud Azure** Messaging for seamless integration and efficient cloud-based application development
- Work with PostgreSQL, MongoDB, AWS Aurora, and other FedEx-relevant databases.
- Write complex SQL queries and optimize database interactions for performance.
- Ensure FedEx's applications meet security and compliance standards (PCI, GDPR).
- Implement authentication and authorization using OAuth2, JWT, and SSO.
- Develop APIs for seamless integration with FedEx shipment tracking, logistics, and payment gateways.
- Work with message queues (RabbitMQ, Kafka) for asynchronous processing.
- Develop unit tests, integration tests, and end-to-end tests using JUnit, Mockito, Selenium, and Cypress.
- Implement test-driven development (TDD) and behavior-driven development (BDD) best practices.
- Work in an Agile Scrum environment, participating in daily standups, sprint planning, and retrospectives.
- Collaborate with cross-functional teams (QA, DevOps, Product Owners) to deliver high-quality software solutions.
- Use Splunk, Dynatrace, or ELK stack for application monitoring and log analysis.
- Optimize application performance by profiling Java code, reducing memory leaks, and tuning queries.

Environment: Java, Python, HTML, CSS, Bootstrap, JavaScript, Oracle, PostgreSQL, Redis, Angular, Node.js, Express.js, Maven, Gradle, ANT, JSON, XML, JSP, Spring, RabbitMQ, Hibernate, Docker, Graph QL, AWS, GCP, WebLogic Server, Kafka, Jenkins, GIT, Log4j, Grafana, SVN, SonarQube, SOAP, Junit, Mockito, SQA, SVN, MongoDB, DynamoDB, Agile.

Client : Bank of America – Charlotte, NC

April 2022 – Jan 2024

Role : Sr. Java Full Stack Developer

Responsibilities:

- Developed Single page applications using ANGULAR 9, GULP, WEBPACK.
- Implemented Dynamic batch feature for batch processing with spring batch.
- Experience in working with Spring Quartz framework and developed various quartz jobs.
- Implemented Dynamic job scheduling according to the business need same using Quartz scheduler.
- All the functionality is implemented using Spring IO / Spring Boot, Thymeleaf and Hibernate ORM.
- Implemented Java EE components using SpringMVC, IOC, spring transactions & spring security modules.
- Implementing or exposing the Microservices to base on RESTful API utilizing Spring Boot with Spring MVC.
- Created http inbound & outbound flows, routing, orchestration, transformations and Security of MULE ESB application using OAuth.
- Migrating Java web services into Go Language Restful web services following Micro services Architecture
- Developed Python batch processors to consume and produce various feeds
- Experience in handling messaging services using Apache Kafka .
- Experience in building isomorphic applications using React.js and Redux with GraphQL on server side.
- Worked extensively with Docker, AWS and Kubernetes, Swagger, ActiveMQ, Spring Cloud.
- Used Jenkins and pipelines to drive all microservices builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Designed and developed MicroServices business components and RESTful service endpoints using Spring Boot.
- Used Amazon Web Services (Amazon EC2, Amazon Simple DB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, and AWS Identity).
- Written automated unit test functions in Golang to cover the API code.
- Developed UI modules using Angular 8, Node.js, JavaScript, Ajax, jQuery, CSS3 and HTML5.
- Extensive usage of NodeJS in implementing the server side build deploys automation and building DEVOPS process from TFS.
- Configuring code coverage and build validation using SonarQube, SonarLint and Google Cloud (GCP)
- Migrated few cloud formation templates to Terraform by using various AWS modules and secures the terraform state file in s3 buckets
- Designed and developed MicroServices using node.js, Mongo DB, Neo4J, Elastic search on Cisco Private Cloud OpenStack Platform.
- Design and develop RESTful API capabilities on Java/node.js technologies and deploying in AWS and implement API proxies on Apigee Edge.
- Worked multiple components for different course element players and quiz question players using Vue.js and Vuex
- Used Vue.js events distribution and parent chain for parent-child component communication
- Worked on spring security, form based authentication with Cross-Site Request Forgery CSRF token and secured REST endpoints with HTTP Basic authentication.
- Designed and developed the Presentation layer using Angular 9 and written logics using Typescript.
- Used Maven to build, test and deploying purposes Used Hibernate annotations for hibernate mapping.
- Developed mule flows for asynchronous messaging, data transformation, routing and batch processing.
- Utilized Scala pattern matching in coding the Akkaactors.
- Developed code for handling bean references in spring framework using DI, IOC using annotations.
- Worked on Distributed Transaction Management system to achieve multiple resource (or XA) transactions with Spring JTA Based on Atomikos, tomcat. Responsible for creating and designing APIs using Apigee Edge.
- Designed and deployed a multitude application utilizing almost all the AWS Including EC2, R53, S3, RDS, DynamoDB, SQS, IAM, Cloud Formation and lambda, focusing on high-availability and fault tolerance.
- Developed Applications using Rule Engines, Drools 4.x, and ILOG with corresponding to validate the business User Roles. Wrote Stories of Go Lang ETL work flows from Mysql- vertica , designed DB schema, efficient queries.
- Used Grafana as a monitoring tool for Spring Boot and Adobe Analytics for ReactJS

- Implemented Design patterns such as MVC, View Dispatcher, Data Access Objects, Singleton, Observer, Factory, and Session Facade. Configured Kafka message source with Spring XD
- Participated in GCP and cloud implementation and configuration of the components for development of web App.
- Experience in configuring and deploying Web Applications using WebLogic, WebSphere, JBoss, Tomcat and Apache.
- Built scripts using LINUX shell script and CURL to test the API load efficiency.
- Used java Collections API extensively such as Lists, Sets and Maps.
- Incorporated Basic authentication and JSON threat protection by using Apigee API gateway
- Used JUnit, Mockito and Power Mocks framework for unit testing of application and implemented (TDD).
- Involved in testing the JMS integration between queues and topics using GEMS.
- Used Jackson Custom Mappers for Custom manipulation for date, currency conversations on JSON Data.
- Used Jackson parser for Marshaling and UnMarshaling.
- Automated infrastructure provisioning on AWS Lambda using Terraform and Ansible
- Developed Business Logic using Python on Django Web Framework.
- Involved in developing API's and RESTAPI proxy using APIGEE edge and for sending mobile notifications.
- Deployed the web app with the use of Apache Tomcat, AWS and GCP to enhance scalability.
- Implemented Oracle database access through drivers. Involved in writing PL/SQL and complex SQL queries.
- Used clear case version control for source code. Involved in debugging the application modules.
- Enhanced, fixed functional and performance related bugs in core product written in GO (Golang).
- Used Log4j for logging and debugging and used JUnit extensively for testing.

Environment: Java 8, JSP, Servlets, Struts, Angular9, ETL, Hibernate, Python, Microservices, typescript, React JS, Spring Core, Oracle10g, JPA, Hadoop, Hibernate, Apache CSF, Go Lang, Apigee, GCP, IoT, REST Web Services, golang, Kafka, Scala, SOA, JUnit, IBM, Node JS, Spring Boot, AWS, PL/SQL, Clear case, HTML5, Eclipse, Terraform, Java Script, Maven, JDBC, AJAX, XML, UML.

Client: Statefarm, Bloomington, Illinois

May 2021 - March 2022

Role: Sr. Java Full Stack Developer

Responsibilities:

- Contributed to **Agile** methodology (SCRUM) by actively participating in daily stand-ups and sprint reviews, ensuring continuous improvement and alignment with project goals throughout the **SDLC**.
- Managed Electronic Health Record (**EHR**) systems, ensuring secure storage, retrieval, and management of patient health information. Maintained compliance with **HL7** and **HIPAA** regulations for data security and privacy.
- Experienced in building enterprise applications and Distributed Systems using technologies such as **Core Java, J2EE (Servlets, JSP, JSF, EJB, Hibernate, Spring, Struts, JDBC)**.
- Implemented solid comprehension of Java fundamentals, encompassing **classes, inheritance, polymorphism, and exception handling**.
- Extensively employed multiple modules of the Spring Framework, including Spring **MVC** for web development, **Dependency Injection (DI)**, and **Inversion of Control (IoC)** for effective component and configuration management.
- Implemented **JWT** tokens for authentication and authorization, ensuring robust security configurations using **Node.js**.
- Implemented in crafting Spring configurations by leveraging Java features such as **Lambda Expressions, Streams, and Filters**.
- Experienced in addressing cross-cutting issues in application development using Aspect-Oriented Programming (**AOP**), Spring Security for safe authentication and authorization, and Spring **JDBC** Templates.
- Implemented **GraphQL** tools, including GraphQL-java for Java applications, to streamline schema development. Proficient in implementing error-handling strategies to provide meaningful messages and maintain a robust and reliable API within **GraphQL**.

- Implemented **HTML, CSS, JavaScript, Bootstrap, and Angular** to create interactive and responsive user interfaces, significantly enhancing user engagement and satisfaction.
- Proficient in client-side scripting with **JavaScript** and **TypeScript**, as well as server-side scripting using **Node.js** and the **Express.js** framework.
- Utilized **Angular** and implemented a range of data binding techniques, including **interpolation, property binding, Angular modules, controllers, event binding, and two-way data binding**, to ensure smooth data flow throughout the application.
- Developed new **Swagger** documentation for **APIs** and modified existing API Swagger documentation.
- Proficient in managing and manipulating data using SQL databases such as **MSSQL**, as well as **NoSQL** databases like **MongoDB** and **DynamoDB**, utilizing **ORM** frameworks like **Hibernate**.
- Skilled in designing and deploying scalable cloud solutions on Google Cloud Platform (**GCP**), with expertise in Compute Engine, **Pub/Sub, Kubernetes**, and GCP Identity and Access Management (**IAM**).
- Proficient in managing containerized applications on **Google Kubernetes Engine (GKE)**. Experienced in diagnosing and resolving issues in web applications using **Splunk** logs.
- Developed a **Node.js** middleware framework like **Express.js**, focusing on creating microservices and serving them through the middleware.
- Transformed a monolithic application into a microservices architecture using Spring Boot and the **12-Factor App** methodology. Deployed, scaled, configured, and created manifest files for various microservices on PCF (Pivotal Cloud Foundry).
- Implemented Spring Boot Microservices for processing messages within a **Kafka** cluster setup.
- Conducted manual testing of the application across all browsers and wrote unit test cases using **Chai** and **Mocha**.
- Implemented unit test cases using Karma Runner and Jasmine for Angular on the client side, and **Chai** for testing endpoints.
- Utilized Maven for project builds, **Jenkins** for continuous integration, and **Pivotal Cloud Foundry (PCF)** for cloud computing. Leveraged **Eureka**-based service registry for PCF, and **Splunk** for log processing.
- Experienced in using **JIRA** for bug tracking and pull requests, Confluence for collaboration and information sharing, and GIT for source control management. Implemented best practices for **JIRA, Agile**, and Confluence.
- Proficient in automating end-to-end workflows through **Jenkins** and GitLab **CI/CD** pipelines with customized YAML configurations.
- Developed **Ansible** playbooks to automate the installation of packages from repositories, modify configurations of remote machines, and deploy new builds.

Environment: Java, HTML, CSS, Bootstrap, JavaScript, TypeScript, Vue, MySQL, PostgreSQL, Node.js, Express.js, Angular, 12-factor app, Maven, Spring, Hibernate, Docker, GraphQL, AWS, GCP, WebLogic Server, Kafka, Jenkins, GIT, Chai, Mocha, SQA, MSSQL, MongoDB, DynamoDB, Agile

Client: HSBC Bank, Hyderabad, India

Oct 2018 - Feb 2021

Role: Java Developer

Responsibilities:

- Designed and coded application components in an Agile environment.
- Implemented Model View Controller (MVC-2) Architecture using Jakarta Struts framework at presentation tier.
- Used Struts frameworks and MVC design patterns to complete several projects on complex areas of development including user interface design, batch processing, stored procedure development, XML, data exchange and integration.
- Extensive use of Struts Framework for Controller components and view components.
- Implemented Spring IOC for inter connection between modules in our application.
- Designed and Developed UI using JSP by following MVC architecture.
- Developed the application using Struts framework. The views are programmed using JSP pages with the struts tag library, Model is the combination of EJB's and Java classes and web implementation controllers are Servlets.
- The Java Message Service (JMS) API used to allow application components to create, send, receive, and read messages.

- Expertise in coding optimized SQL queries on databases like Oracle.
- Developed back-end PL/SQL packages, UNIX shell scripts for data migration and batch processing.
- Created and customized UNIX shell scripts for automating regular maintenance and batch jobs.
- Implemented core java Multithreading, Collections, Exception Handling, and OOP's concepts.
- Involved in coding, building java applications using Core java, Multithreading, JSP and Servlet.
- Involved in performing Unit and Integration testing JUnit.

Environment : Core Java, J2EE 1.3, JSP 1.2, Struts, Spring IOC, EJB 2.0, Struts 1.1, JDBC 2.1, Oracle 8i, UML, JMS, XML, Web Logic 7.0, MVC Design Pattern, Eclipse 2.1, Log4j and JUnit.

Parexel, Hyderabad, India

March 2017 – Sept 2018

Role: Java/J2EE Developer

Responsibilities:

- Used Web services (SOAP, Rest) for transmission of large blocks of XML data over HTTP.
- Used XML Web Services using SOAP protocol to transfer the amount to other application that is remote and global to different financial institutions. Used SoapUI for web service testing.
- Extensively used Core Java such as Multi-Threading, Exceptions, and Collections.
- Extensively used Java Collections APIs & Multi-threading in handling batch service requests.
- Developed real time tracking of class schedules using NodeJs (socket.io based on socket technology, Express JS framework).
- Taken care of java Multi-Threading in common java classes/library.
- Extensively used Java Scripts to enforce client-side validations and used JQuery for Ajax processing.
- Involved in development/ maintenance of various web servis using IBM WebSphere to interact with other applications.
- Developed Entity Beans as Bean Managed Persistence Entity Beans and used JDBC to connect to backend Database DB2.
- Worked as the part of a core team to monitor and enhance the performance of the application.
- Involved in design of JSP's and Servlets for navigation among the modules and designed cascading style sheets, XSLT and XML part of Order entry
- Hosted the application on WebSphere and used Maven as the build automation tool. Environment:
- Java 6.0, Jakarta Struts Framework 2.0, Hibernate 3.0, EJB, SOAP, Web Services, CSS, NodeJs, eclipseIBM WebSphere Application Server 7.0, JUnit, UNIX, JavaScriptAWS, Servlets, JSP, JDBC, JQuery, DB2, XML, XSLT.

Environment: Java, J2EE, HTML, CSS, JavaScript, JQuery, Angular 2, Node JS, JSP, JSTL, Spring (IOC, MVC, Security), Hibernate, XML, XSD, SOAP UI, Web Services, Restful, SOAP, JAX-RS, JAX-WS, WSDL, Log4j, JUnit, Web Logic, Jenkins, Gradle, GIT, IntelliJ, JIRA, Agile Methodology, Windows, Linux, Rational Rose and UML.

Client: Finacus Solutions Pvt. Ltd, Mumbai, India

July 2014 - Feb 2017

Role: Java Developer

Responsibilities:

- Engaged in multiple stages of the Software Development Life Cycle (**SDLC**) for the application, including requirement gathering, design, analysis, and code development.
- Implemented **Object-Oriented design** principles following **SOLID principles**, incorporated with different design patterns like Builder, Factory, Observer, and Strategy patterns. We used these methodologies to create a tidy and maintainable architect on a scale.
- Applied core **Java** principles such as **Multithreading, Collections, Exception Handling, and Annotations**.
- Developed applications leveraging **Spring MVC architectures**, integrating annotations, **dependency injection**, and **Inversion of Control (IOC)**, while seamlessly integrating with the **Struts framework for Java Server Pages (JSP)-based views**. Ensured a decoupled architecture, flexibility, and minimized code redundancy.

- Designed user interface (UI) pages using **HTML, CSS, JavaScript, jQuery, Angular, and Bootstrap** to craft responsive web pages.
- Develop and oversee web-based applications utilizing **JPA-Hibernate** while seamlessly integrating them with **Oracle RDBMS**.
- Implemented **SQL** queries to efficiently interact with and manipulate database data, ensuring optimal performance and data integrity.
- Proficiently configured and automated continuous integration and continuous deployment (**CI/CD**) pipelines utilizing **Jenkins**, streamlining software development processes, and ensuring rapid and reliable deployment of applications.
- Implemented **Microservices** architecture using the **Spring Boot** framework with Java, leveraging **JAX-RS** for web services.
- Extensively utilized core Java and J2EE technologies, such as **Servlets, JSP, and JDBC**.
- Execute comprehensive unit and integration tests utilizing **JUnit and Mockito** to guarantee top-tier code quality and system stability.
- Monitored project progress, tracking issues, and managing bugs using **Jira**, ensuring seamless operation within the Waterfall methodology.
- Implemented **Eclipse** or **IntelliJ** as the primary integrated development environment (**IDE**) for comprehensive development, debugging, and testing, ensuring efficient software development lifecycle management and robust application quality assurance.
- Specialized in Test Driven Development (**TDD**), ensuring the creation of comprehensive JUnit tests for each functionality prior to its implementation.

Environment: Java, JPA-Hibernate, struts, jdbc, servlet, Spring AOP, Spring Core, Maven, Junit, Mockito, RDBMS Oracle, soap, Jira, JSP, Spring MVC, Spring Core, Maven, RDBMS Oracle, GitHub, Tomcat, Linux, Eclipse, IntelliJ

Education : Bachelor's of Computer science at JNTUH(2014)
