Summary

Full-stack Software Engineer with 3+ years of experience designing, building, and deploying scalable enterprise applications using Java, Spring Boot, React, and AWS. Skilled in developing secure microservices, real-time dashboards, and distributed systems within financial domains. Proficient in CI/CD automation, cloud-native architectures, and performance optimization. Strong expertise in authentication, observability, and event-driven systems, delivering reliable, high-performance solutions that enhance security, scalability, and operational efficiency across complex application environments.

TECHNICAL SKILLS

Programming Languages & Frameworks: Java, Python, JavaScript, TypeScript, SQL, Go, Spring Boot, Spring MVC, Spring Security, Node.js, Express.js, Hibernate, JPA, JSP, Servlets, Maven, Gradle

Frontend Development: React.js, Next.js, Redux, React Query, HTML5, CSS3, Tailwind CSS, Bootstrap, SASS/SCSS, Responsive Design, TypeScript, Web Accessibility (WCAG), JSP, Webpack, ESLint, Prettier, Figma

Backend & API Development: RESTful APIs, GraphQL, WebSockets, Microservices Architecture, Serverless Functions, Hibernate, JWT Authentication, OAuth 2.0, API Gateway, Role-Based Access Control (RBAC), Webhooks

Cloud, DevOps & Infrastructure: AWS (EC2, S3, Lambda, RDS, API Gateway, Cognito), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI/CD, Nginx, Vercel, Netlify, CI/CD Pipelines, ArgoCD

Databases, Tools & System Design: PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka, RabbitMQ, Redis Streams, Git, Maven, Gradle, Jira, Confluence, Agile/Scrum, JUnit, Mockito, Selenium, Jest, Cypress, Postman, ELK Stack, Prometheus, Grafana, System Design (HLD/LLD), Load Balancing, Circuit Breakers, Distributed Systems

PROFESSIONAL EXPERIENCE

Software Engineer, *Morgan Stanley*

Aug 2024 – Present | Remote, USA

- Architected modular Spring Boot services enabling automated settlement reconciliation for multi-currency trades, improving reconciliation throughput by 22% and integrating with internal FIX message processing systems.
- Designed React-based trade surveillance dashboards with advanced filtering and role-aware data visualization, improving compliance monitoring accuracy for 1.2M trades daily across multiple regulated markets.
- Deployed scalable microservices on AWS EKS using Helm and ArgoCD, achieving automated blue-green deployments with zero downtime while ensuring strict rollback policies for regulatory audits.
- Implemented asynchronous batch processing pipelines with Spring Batch and S3 integration, processing 15M financial records nightly and reducing operational batch duration by 37% consistently.
- Enhanced platform observability through OpenTelemetry tracing and Grafana dashboards, reducing average incident resolution time by 42% and improving root cause detection efficiency across critical trading modules.
- Strengthened authentication layers using SAML 2.0 and fine-grained session policies, enabling secure single sign-on integration for over 5K employees with enforced adaptive MFA workflows.

Software Engineer, *LTIMindtree*

Jun 2021 – Jul 2023 | Remote, India

- Engineered secure payment processing microservices using Spring Boot, enabling 20% faster transaction handling while integrating OAuth 2.0 authentication and centralized error logging.
- Developed dynamic React.js dashboards visualizing real-time financial transactions, improving data accessibility for 3K users with Redux state management and custom reusable components architecture.
- Implemented end-to-end RESTful APIs for portfolio reconciliation, optimizing reconciliation speed by 18%, ensuring consistent data validation and integrating with external banking partner APIs.
- Automated deployment pipelines using Jenkins and Docker, reducing release cycles from weekly to daily, while integrating containerized microservices with AWS EC2 and API Gateway routing.
- Built event-driven notification services with Kafka and Redis Streams, enabling instant alerts on high-value transactions, achieving sub-second delivery and improving fraud detection accuracy significantly.
- Integrated fine-grained RBAC and JWT-based authentication, enhancing application security for financial workflows and ensuring compliance with regulatory frameworks, including PCI DSS and SOC 2 standards.
- Collaborated with QA and product teams to implement Cypress and JUnit testing suites, improving test coverage by 35% and maintaining seamless CI/CD integration with GitHub Actions.

EDUCATION

Master of Science, *Lindsey Wilson College*

Aug 2023 – May 2025 | KY, USA

Technology Management

Bachelor of Engineering, *Vignan's University*

Jun 2018 – Aug 2022 | Guntur, India

Computer Science
