Summary

With a dynamic 9-year career in software development, I blend deep technical expertise with an eagerness to embrace new technologies. My journey is marked by consistently achieving ambitious goals and driving projects to successful completion. Key highlights of my professional identity include:

- Expertise in Software Development: My extensive 9-year tenure in software development spans across diverse clients and environments, with a robust command over both web and mobile development technologies.
- Proficiency in Project Management: Demonstrated ability in steering projects from inception to deployment, offering strategic technical guidance and ensuring quality assurance at every stage.
- Effective Communication: I excel in bridging technical and non-technical realms, facilitating seamless project progression and contributing to the broader organizational objectives through effective communication.

Experience

Senior Full Stack Engineer

Chronos Investigations

Jan 2024 - Present

- Architected and led the development of a sophisticated payment investigation dashboard, automating document-based transaction analysis using a microservices architecture powered by Node.js (Express) and Python (FastAPI), delivering scalable, high-performance solutions for real-time payment fraud detection.
- On the frontend, data-rich visualization components using React.js/Next.js and D3.js, delivering real-time, intuitive graphical representations of transaction data. Optimized rendering performance with React Hooks and memoization, enabling rapid detection of fraud patterns and anomalies. Applied code-splitting and lazy loading, reducing load times by 35%.
- Engineered a Python-based OCR pipeline using Tesseract for automated extraction of transaction data from financial documents, deploying advanced data processing techniques to capture key details (amounts, dates, account numbers) with over 95% accuracy, significantly reducing manual data entry and processing time.
- Integrated an LLM-powered chat interface using the OpenAI API, allowing staff to interact with the system via natural language queries. Implemented LangChain to facilitate intelligent data querying, dynamically filtering results in real time, and improving productivity by 40%.
- Designed and deployed WebSocket connections between the Node.js backend and the React frontend, ensuring real-time synchronization of transaction data
- Designed PostgreSQL database schema and implemented models using SQLAlchemy
- Containerized the application environment using Docker, streamlining development workflows and ensuring consistency across multiple environments. Deployed the full stack on AWS (EC2, S3, RDS), utilizing CloudFront for secure and low-latency content delivery.
- Enhanced developer productivity by implementing CI/CD pipelines with GitLab CI, automating testing, linting, and deployment processes, reducing deployment times by 30% and ensuring continuous delivery of new features.

Senior Software Engineer

EnergyHub

Feb 2020 – Dec 2023

- Led UI Development of a comprehensive energy management platform using React, React Hooks, and Redux, enhancing user experience and optimizing energy distribution during peak demand.
- Built Interactive Frontend Components with TypeScript and D3.js for real-time energy analytics and visualizations, providing end-users with detailed consumption insights.
- Architected Machine Learning Pipelines for predictive analytics, integrating Python, NumPy, and Pandas to predict load management, reducing energy wastage by 20%.
- Collaborated Cross-Functionally with product and UX teams to drive key design decisions for dynamic, data-intensive dashboards, improving app usability and engagement by 40%.
- Integrated Cloud Services with AWS and Azure for data storage and processing, optimizing costs and ensuring high availability for real-time applications.
- Mentored Junior Developers in best practices, conducting regular code reviews and workshops on unit testing, design patterns, and scalable component architecture.

Senior Software Engineer

Condé Nast

Sep 2017 – Jan 2020

- Engineered Full Stack Solutions for digital publishing platforms, utilizing Node.js and React to streamline content delivery and enhance user engagement across multiple brands.
- Developed and Deployed Hybrid Applications using React Native and Firebase, achieving consistent UI and performance across mobile and web platforms.
- Designed database schemas for PostgreSQL and MongoDB.
- Spearheaded SEO Optimization by implementing Gatsby.js with GraphQL for static site generation, increasing organic reach by 40%.
- Optimized Backend APIs using Python and Django, enhancing content retrieval speed and reducing API response time by 30%.
- Collaborated with Cross-Functional Teams to refine application design, incorporating UX insights and feedback for a seamless user experience.
- Employed Agile Methodologies to manage sprints, task estimation, and project timelines, ensuring high-quality deliverables on schedule.

Full Stack Developer

Trove Inc

Jan 2016 – Aug 2017

- Developed a Social Media Analytics Platform using Node.js (Express) and CasperJS for real-time data scraping, allowing live insights and trend analysis for business intelligence.
- Built Scalable Microservices for the backend to handle high-volume data ingestion, increasing platform reliability and scalability by 50%.
- Implemented Frontend Components with React and JavaScript for dynamic data visualization, enhancing client accessibility to real-time analytics.
- Enhanced Data Processing Workflows with Python, creating automated data pipelines that

reduced manual intervention by 30%.

- Configured Cloud Services on AWS for secure and scalable deployment, ensuring consistent performance during high-traffic periods.
- Worked Closely with UI/UX Designers to align visual aesthetics with functional requirements, improving overall user satisfaction.

Intern – Documentation and Technology Evaluation

Autodesk

Jun 2015 – Dec 2015

- Automated AWS Account Creation using Python, JavaScript, and Boto3, expediting internal account setup for employees.
- Collaborated on Infrastructure Redesign: Evaluated and redeveloped technical architectures to optimize operational workflows.

Education

University of California, Berkeley

Bachelor's degree, Computer Science

Sep 2011 - May 2015

Certifications

Certificated senior fullstack engineer - IBM

<https://www.coursera.org/account/accomplishments/verify/FR8QBH55DP35>

Skills

Agile Methodologies • Search Engine Optimization (SEO) • User Experience (UX) • Algorithms • Data Structures • Problem Solving • React.js • React Native • React Hook • Node.js • Nest.js • Express.js • AWS • Azure • Docker • Kanban • GCP • AI/ML • Blockchain • TypeScript • HTML/CSS • SQL • PostgreSQL • NoSQL • MongoDB • Redis • Flask • Python • FastAPI • Django
