

VIGNETHA CHERUKURU

Atlanta, GA | (862) 335-0650 | Vignetha26@gmail.com

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience designing, developing, and deploying scalable Java Spring Boot microservices and React frontends. Strong expertise in **cloud-native applications, event-driven architectures (Kafka, RabbitMQ), and container orchestration (Kubernetes, Docker, ECS)**. Proficient in **AWS services (EKS, ECS, Lambda, RDS, DynamoDB), Terraform, and automation scripting** with Bash/YAML. Skilled in **RESTful APIs (OAS/Swagger), CI/CD, and Agile delivery** with a proven record of improving system reliability, scalability, and security.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, SQL
- **Backend:** Spring Boot, Microservices, Hibernate, RESTful APIs (OAS/Swagger)
- **Frontend:** React.js, Angular, HTML5, CSS3, Redux, Jest, Cypress
- **Databases:** PostgreSQL, MongoDB, DynamoDB, MySQL, Oracle
- **Messaging:** Apache Kafka, RabbitMQ, AWS MSK
- **Cloud:** AWS (EKS, ECS, S3, Lambda, API Gateway, RDS, DynamoDB, Aurora), Azure (AKS), GCP
- **Infrastructure & Automation:** Docker, Kubernetes, Terraform, Bash, YAML, GitHub Actions, Jenkins
- **Monitoring & Testing:** Grafana, ELK, New Relic, JUnit, Mockito, Performance Testing
- **Methodologies:** Agile/Scrum, CI/CD, TDD, BDD

PROFESSIONAL EXPERIENCE

Software Engineer

CorTracker Inc, Irving, TX | Apr 2025 – Present

- Developed **secure and scalable microservices** using Java 17 and Spring Boot, implementing authentication, validation, and API versioning.
- Designed ReactJS components for dashboards with API integration, Redux state management, and accessibility features.
- Worked with **Kafka event streams**, resolving delivery issues and ensuring operational stability through automated test coverage.
- **Containerized applications** with Docker and deployed to **Azure Kubernetes Service (AKS)**, collaborating with DevOps on YAML-based CI/CD pipelines.
- Troubleshoot build/deployment failures in Jenkins pipelines and automated remediation steps for recurring issues.
- Contributed to performance tuning, debugging, and proactive monitoring using Grafana dashboards.

Java Developer

CarShield, O'Fallon, MO | Jan 2023 – Jan 2025

- Architected and deployed RESTful APIs with Spring Boot to AWS EKS/ECS, improving modularity, fault isolation, and horizontal scalability, leading to a 50% increase in platform resilience.
- Integrated AWS Lambda, API Gateway, and DynamoDB to create serverless modules that cut infrastructure costs by 50% while reducing latency for high-volume API requests.

- Built a real-time Kafka Streams pipeline that increased order-processing throughput by 40%, enabling faster customer-facing transactions and reducing SLA breaches.
- Strengthened application security by implementing OAuth2 and JWT-based authentication across distributed microservices, preventing unauthorized access and ensuring compliance with internal audit standards.
- Led refactoring of a legacy Java monolith into microservices, improving deployment flexibility, enabling independent scaling, and reducing release cycle times from monthly to bi-weekly.
- Conducted performance profiling and stress testing with JMeter and Grafana dashboards, uncovering bottlenecks and reducing API response times by 35%.

Backend Developer

Vista Applied Solutions Group INC, Herndon, VA | Aug 2022 – Dec 2022

- Built scalable data ingestion pipelines using AWS S3, RDS, and CloudFormation, automating provisioning and increasing reliability of high-volume data workloads.
- Developed Spring Boot APIs to transform structured and unstructured datasets, supporting advanced BI analytics and enabling real-time insights for internal users.
- Automated data validation and transformation using Python and SQL rule engines, ensuring cross-system consistency and reducing manual reconciliation tasks by 60%.
- Optimized high-complexity SQL queries for analytical dashboards, improving performance and reducing execution times by 45%.

Software Developer

Accretion Info Systems, India | Jun 2019 – Mar 2021

- Developed responsive web applications using Java, Spring MVC, and JavaScript, including customer onboarding tools that reduced processing time for new clients by 25%.
- Implemented multi-threaded Java modules for bulk data ingestion, achieving a 70% increase in throughput and enabling near real-time updates for enterprise clients.
- Authored stored procedures and optimized SQL queries, which improved query response times by 30% and enhanced system performance for critical applications.
- Participated in a full Agile SDLC cycle, including requirements gathering, design discussions, sprint planning, and testing, contributing to successful on-time delivery of two enterprise projects.

EDUCATION

University of Central Missouri, MO, USA | Dec 2022

Master of Science in Computer Science

Jawaharlal Nehru Technological University, Anantapur, India | Apr 2019

Bachelor of Technology in ECE

CERTIFICATIONS

AWS Certified Developer – Associate | Amazon Web Services | Issued 2023
