

REVANTH T

DEVOPS CLOUD ENGINEER

(224)-310-0398 ♦ Revanththippabotla2022@gmail.com ♦ Chicago, Illinois

PROFESSIONAL SUMMARY

Experienced DevOps Engineer with 4 years of expertise in automating, optimizing and managing cloud-based infrastructure and CI/CD pipelines across industries like Banking, Healthcare, IT Services and Consulting. Proficient in AWS, Azure, Kubernetes, Docker, Terraform, Jenkins, Ansible and CI/CD pipeline automation, ensuring seamless software delivery and high system availability. Strong expertise in Infrastructure as Code (IaC), cloud security, monitoring and performance optimization. Proficient in utilizing monitoring and logging tools such as AWS CloudWatch, Prometheus and Grafana to enhance system visibility and streamline troubleshooting. Well-versed in cloud security best practices, implementing AWS IAM policies, Secrets Manager and AWS KMS to enforce secure access controls and data protection. Experienced in automating configuration management with Ansible and PowerShell, improving system efficiency and minimizing downtime. Skilled in migrating on-premise applications to AWS, leveraging EC2, S3, RDS and Lambda to enhance scalability and optimize costs. Strong expertise in version control systems like Git, GitHub and Bitbucket, ensuring seamless collaboration in Agile environments following Scrum and Kanban methodologies.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda, CloudWatch, IAM, KMS, Secrets Manager) Microsoft Azure (Azure DevOps, Virtual Machines, Storage Accounts), Azure Kubernetes Service (AKS)
- **CI/CD Tools:** Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, Bitbucket Pipelines
- **Infrastructure as Code (IaC):** Terraform, AWS CloudFormation
- **Containerization & Orchestration:** Docker, Kubernetes (EKS/AKS), Helm
- **Scripting & Automation:** Bash, PowerShell, Python, Ansible
- **Version Control:** Git, GitHub, Bitbucket, GitLab
- **Monitoring & Logging:** AWS CloudWatch, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)
- **Security & Compliance:** AWS IAM Policies, AWS Secrets Manager, AWS KMS, SSL/TLS, Firewall Configuration
- **Networking:** VPC, Security Group, TCP/IP, HTTP, Routers, Firewalls, Switches, Load Balancers, Route 53, DNS, VPN

WORK HISTORY

DevOps Engineer | Discover | Riverwoods, Illinois

Aug 2024 – Present

- Managed and secured cloud infrastructure using AWS services (EC2, S3, Lambda) and implemented Infrastructure as Code (IaC) with Terraform, improving resource management efficiency by 40%.
- Implemented Lambda functions to automate tasks in DynamoDB, S3, and handle API requests via Amazon API Gateway, improving operational efficiency by 36% and reducing manual intervention.
- Designed and implemented automated CI/CD pipelines using GitLab, integrating security tools like SAST and DAST, ensuring early detection of vulnerabilities and improving code quality.
- Developed Python scripts to automate the management of AWS services, including web servers, ELB, CloudFront, and EC2, reducing manual intervention by 10 hours per week and accelerating deployment processes.
- Deployed and managed containerized applications with Docker and Kubernetes, achieving a 32% improvement in scalability and performance, optimizing resource utilization, and increasing uptime for banking application.
- Integrated automated compliance checks within DevOps pipelines, enforcing security policies and providing documentation for internal and external audits to maintain regulatory compliance.
- Implemented and managed configuration management tools to automate infrastructure provisioning, reducing manual processes by 32% and improving deployment efficiency.
- Implemented advanced monitoring solutions using AWS CloudWatch, Prometheus, and the ELK Stack, enhancing application performance and troubleshooting capabilities, significantly reducing incident response times.
- Developed and maintained incident response protocols, swiftly diagnosing and resolving system issues to minimize downtime and ensure business continuity.
- Identified opportunities for process improvements within the DevOps lifecycle, contributing 30% of efforts, and implemented best practices to enhance software delivery and operational efficiency.

- Engineered and implemented scalable cloud solutions across platforms such as Azure and to meet diverse client requirements.
- Diagnosed and resolved cloud networking issues in Azure, specifically with virtual networks (VNETs), subnets, and network security groups (NSGs); ensured seamless connectivity, resulting in an uptime improvement of 99.9% across all deployed services.
- Developed and managed automated CI/CD pipelines using Jenkins and Azure DevOps, improving deployment efficiency and reducing time-to-market.
- Utilized Terraform and ARM templates to automate infrastructure provisioning, ensuring consistency and repeatability across development and production environments.
- Developed and managed containerized applications using Docker and Kubernetes, facilitating microservices architecture and improving application scalability by 50%, while reducing deployment time by 40%.
- Implemented monitoring solutions with Prometheus and Grafana to track system performance, identifying and resolving issues to ensure high availability and optimal performance.
- Deployed SonarQube servers using containerized techniques, enforcing quality gates and efficiently managing users and user groups to elevate overall code quality.
- Automated deployment workflows using Ansible and PowerShell, reducing manual intervention and minimizing deployment errors.
- Worked closely with development, operations and security teams to streamline processes and ensure alignment with business objectives.
- Optimized cloud resources to enhance system performance and scalability, ensuring applications could handle increased loads effectively.
- Maintained comprehensive documentation of systems and procedures, facilitating knowledge transfer and supporting continuous improvement initiatives.

DevOps Engineer | Access Healthcare | India**Aug 2019 – Feb 2021**

- Assisted in maintaining GitHub Actions CI/CD pipelines for automated healthcare application deployments.
- Created Python and Bash scripts to automate tasks like log rotation, updates, and backups, improving efficiency.
- Configured and maintained Linux operating systems, ensuring optimal performance, security, and reliability.
- Managed cloud resources on AWS and Azure, ensuring the security of virtual machines, storage, and networking.
- Collaborated on enhancing security and implemented monitoring and logging solutions by configuring Nagios for system health checks and the ELK Stack for real-time log aggregation and analysis of hospital IT systems.
- Ensured HIPAA and GDPR compliance by implementing DevOps security best practices, including secure code scanning, vulnerability assessments, access controls, and data encryption across the CI/CD pipeline.
- Created and maintained Docker containers for consistent application deployment across multiple environments.
- Contributed to configuring Ansible modules for AWS deployment and automating provisioning and configuration of virtual and physical instances using Ansible playbooks.
- Monitored application performance, identified and resolved issues, and escalated critical incidents to ensure minimal downtime and maintain optimal system reliability.
- Enhanced system security by managing OS patches, user access controls, and IAM roles and policies, while conducting regular security audits with SonarQube.
- Collaborated with cross-functional teams using Jira and Git to streamline workflows, track project progress, and ensure timely delivery of application updates.

EDUCATION

- Masters in Computer Science Management from Avila University, Kansas City, MO, USA
- Bachelors in Computer Science and Engineering from SCSVMV University, Chennai, India

CERTIFICATIONS

- AWS Certified Solution Architect – Associate certification issued by AWS Training and Certification
- Hashi Corp Certified: Terraform Associate
