Professional Summary

With over seven years of experience as a Software Engineer, I have developed expertise in full-stack development, cloud computing, and mobile application development. I hold a master's degree in computer science from Wichita State University, where I achieved a GPA of 3.84/4. My skill set includes designing scalable backend architecture, developing Android applications, and administering AWS and ELK environments.

I am proficient in Java, Kotlin, Python, C++, Spring Boot, NodeJS, Android, RESTful API design, microservices, MySQL, and MongoDB. My professional experience spans roles at organizations such as Macy's, Amazon, Capgemini, and Wichita State University, where I have contributed to projects in log analytics, robotics, and financial systems.

Professional Experience

Macy's – Software Engineer (May 2023 – Present)

At Macy's, I have collaborated with multidisciplinary engineering teams to enhance the scalability and reliability of the company's digital infrastructure. I introduced improvements to log analytics workflows, enabling real-time data visualization and integrating advanced metrics tracking for operations critical to the business. My role included optimizing incident response strategies, streamlining root cause analysis, and automating escalation protocols—efforts that resulted in significant reductions in downtime and improved service reliability. I also fostered a culture of continuous learning and technical excellence, empowering colleagues to adopt innovative cloud monitoring solutions in support of Macy's commitment to operational transparency and customer satisfaction.

- Served as lead engineer in advancing log analytics and infrastructure monitoring across a national retail network using development-centric methodologies.
- Spearheaded three ELK-based log management projects, architecting pipelines that increased log ingestion rates to 99% and enforced PCI and firewall compliance standards.
- Engineered and deployed over 50 server agents through automation, reducing log issues by 30% and improving dashboard accuracy for stakeholders.
- Developed and improved proactive alerting features in ELK, enabling the team to detect anomalies and respond 40% faster.
- Led strategic deployments of Nagios agents across GCP virtual machines, expanding monitoring scope by 25%.
- Coordinated maintenance operations such as load balancer cleanups and Elasticsearch upgrades, streamlining update processes and achieving a 20% speed increase.
- Automated workflows for weekly ELK sudo access requests and permission audits, ensuring consistent audit compliance.
- Conducted knowledge-sharing sessions and developed ELK architecture training programs aligned with AWS development best practices.
- Implemented automated log rotation scripts to enhance system reliability and optimize long-term storage management.
- Partnered with development teams to refine log parsing logic, providing higher-quality analytics data.
- Designed and customized executive dashboards, leveraging development tools for rapid, actionable insights into performance metrics.

Technologies: ELK Stack (Elasticsearch, Logstash, Kibana), Nagios, GCP, AWS, Putty

Amazon – Software Development Engineer (Android) (June 2022 – March 2023)

At Amazon, I developed backend and robotics solutions supporting academic research and real-time applications. I designed RESTful APIs and Python data pipelines that increased data processing throughput by 30% and built automation tools that accelerated CI/CD deployment times by 40% in multiple environments. My work on robotics control algorithms achieved 95% accuracy in autonomous navigation simulations, and collaboration with interdisciplinary teams led to the implementation of advanced machine learning models, improving object detection and path planning accuracy by 12%. I also contributed to mobile app development, resulting in a 20% improvement in

performance benchmarks. Throughout these projects, I utilized technologies such as Python, RESTful APIs, CI/CD, LiDAR, IMU, machine learning, and Kotlin.

- Contributed to the Amazon Flex application, supporting over 100,000 delivery partners worldwide.
- Engineered and launched a redesigned Calendar screen, improving order scheduling efficiency by 35% for delivery partners.
- Architected and implemented the BRIC framework, reducing codebase complexity by 20% and enhancing UI scalability.
- Directed migration of legacy modules from Java to Kotlin, minimizing technical debt and boosting performance by 15%.
- Addressed localization challenges, enabling accurate distance conversion for over 10,000 users in India.
- Collaborated with a cross-functional team of 15, participating in Agile ceremonies and leading operational excellence initiatives.
- Provided architectural guidance, influencing the adoption of scalable UI patterns.
- Enhanced app security protocols to better protect user data and privacy.
- Led onboarding sessions for new engineers, facilitating integration into the development process.
- Optimized background synchronization processes, reducing server load and improving real-time user updates.
- Researched and integrated third-party APIs to enhance map and navigation features.

Technologies: Kotlin, Java, Android SDK, RxJava, LiveData, Fragments, Agile methodologies, BRIC/MVVM architectures

Wichita State University – Software Engineer (Dec 2021 – June 2022)

- Developed backend and robotics systems for academic and real-time applications.
- Created Python RESTful APIs and data pipelines, increasing processing speed by 30%.
- Automated CI/CD deployments, reducing deployment time by 40%.
- Developed robotics control algorithms, achieving 95% autonomous navigation accuracy in simulations.
- Collaborated with cross-functional teams to enhance object detection and path planning, increasing accuracy by 12%.
- Improved mobile app performance by 20%.

Technologies: Python, RESTful APIs, CI/CD, LiDAR, IMU, Machine Learning, Kotlin

Capgemini – Software Engineer (Jan 2019 – Jan 2021)

- Developed financial systems and led process improvements for enterprise clients.
- Built the Pecunia Finance System for over 1,000 users, processing more than \$10M in transactions monthly.
- Reduced user activity response times by 25% through code and workflow optimizations.
- Served as scrum master, coordinating a seven-member team.
- Mentored peers and was recognized as WhitehatJr's top coding instructor.

Technologies: Java, Spring, MVC, MySQL, Jenkins, Git, SonarQube

Areas of Expertise

- Application & Mobile Development
- Cloud Computing & Data Analytics
- Algorithms & Data Structures
- Competitive Programming
- Object-Oriented Design
- Relational & NoSQL Databases
- Operating Systems
- Project & Team Leadership

Projects

Banking System (Jan 2020 – Jan 2021)

- Developed a modular banking platform for secure account management and efficient loan processing.
- Served as scrum master for a cross-functional team of five, consistently meeting project deadlines and improving team efficiency by 18%.
- Established MVC architectural patterns, enhancing system maintainability and reducing errors by 22%.
- Implemented Jenkins and SonarLint integrations to automate 90% of test coverage and code quality assessment.

Automated Schedule Table Generator (Aug 2019 – Dec 2019)

- Designed and developed an automated scheduling solution for academic timetables and substitute allocation.
- Minimized scheduling conflicts by 95%, ensuring timely completion of over 300 class sessions.
- Engineered dynamic logic for replacing absent faculty, optimizing scheduling processes.

Android Malware Classification Using Machine Learning (Jan 2021 – May 2021)

- Built a web-based analytical application for static analysis and detection of malicious Android software.
- Achieved 93% malware identification accuracy through advanced machine learning and feature engineering.
- Enabled expedited risk evaluation for more than 1,000 app submissions.

Achievements

- Organized and led an Information Technology Quiz for more than 250 participants, demonstrating strong organizational and communication skills.
- Delivered technical presentations at university events, engaging audiences of more than 100 attendees.
- Received recognition as best coding instructor at WhitehatJr for excellence in instruction.

Technical Skills

- Programming Languages: Java, Kotlin, Python, C, C++, SQL, HTML5, CSS, JavaScript
- Frameworks: Spring Boot, NodeJS, Android, JUnit, Bootstrap
- Web Technologies: Core Java, RESTful APIs, MVC architecture
- Databases: MySQL, MongoDB, SQL Server, Hadoop
- Cloud Platforms: AWS, Microservices
- Tools & IDEs: Git, Visual Studio Code, MySQL Workbench, Android Studio

Education

Wichita State University, Wichita, KS

Master's degree in Computer Science
