

MACIAS MARCOS ROMERO

Senior Software Engineer

(501) 417-1885 # Warren City, Arkansas # [linkedin.com/in/macias-marcos-romero/](https://www.linkedin.com/in/macias-marcos-romero/) # macias.m.romero1211@outlook.com

Software Engineer with over five years of experience in designing, developing, troubleshooting, and debugging comprehensive software solutions, including operating systems, compilers, routers, networks, utilities, databases, and Internet-related tools. Expertise in Java development and web application debugging with a strong foundation in computer science fundamentals. Skilled in creating maintainable, well-documented software that meets stringent quality standards and complex business requirements.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science, 2013

SKILLS

Programming Language: TypeScript, JavaScript (ES6+), Java, JavaScript, CSS, Maven, Spring, Vaadin, Python, SQL, HTML5, CSS3, SCSS/SASS

Front End Development: React.js, Redux, React Router, Next.js, Webpack, Vite, Material-UI, Tailwind CSS, SASS/SCSS, Cypress, Storybook

Back End Development: Spring Boot, Spring Cloud, Hibernate, JPA, Node.js, Express.js, Laravel, Symfony

Database Technologies: SQL Server, PostgreSQL, MySQL, Entity Framework Core / Dapper (ORMs), MongoDB, Redis, Azure Cosmos DB

Cloud Platforms: Microsoft Azure (App Services, Azure Functions, Cosmos DB, Azure DevOps), AWS (EC2, S3, RDS, Lambda, CloudFormation), Docker

DevOps & CI/CD: Azure DevOps (Pipelines, Repos, Artifacts), Jenkins / GitHub Actions / GitLab CI, Terraform, Docker & Kubernetes, Helm, Ansible

APIs and Web Services: RESTful API, GraphQL, SOAP

Testing: Cypress, Jest, SonarQube, Selenium, Postman, PyTest

Tools and Platforms: Eclipse, Git, Chrome DevTools

Version Control and Collaboration: Git (with GitHub, GitLab, Bitbucket), Azure DevOps Repos, JIRA

Miscellaneous: Agile Methodologies (Scrum, Kanban), Linux/Unix Shell Scripting, OpenAPI/Swagger, Service Workers (PWA), WebAssembly

PROFESSIONAL EXPERIENCE

CuroGens

August 2023 – December 2024

Senior Software Engineer

Client Domain: Financial Services

- Designed and implemented scalable backend systems that significantly enhanced data processing capabilities and application performance.
- Developed and maintained software tools that improved the interoperability of **B2B** software, using **Java** and **Maven**, enhancing system integration and functionality.
- Participated actively in the development of a **Databridge** administrative console, utilizing **Java** to enable efficient configuration and operation of data replication tasks.
- Collaborated with hardware specialists to ensure optimal compatibility of software with underlying hardware, influencing design decisions to enhance system performance.
- Implemented robust **API-driven** services to automate interactions with databases, particularly focusing on operational efficiencies and performance optimization.

- Integrated software development processes into **CI/CD** pipelines, ensuring smooth and automated deployments via **Jenkins**.
- Developed proactive monitoring and alerting systems using custom scripts and tools, improving system reliability and performance.
- Authored extensive documentation on software design and code changes, ensuring maintainability and ease of use for future development efforts.
- Delivered well-structured, tested, and documented code, consistently meeting project timelines and exceeding quality expectations.
- Provided mentorship to junior developers, fostering a culture of technical excellence and continuous improvement.

WiserBrand

September 2021 – June 2023

Software Engineer

Client Domain: E-commerce and Digital Marketing

- Designed and implemented a scalable **microservices architecture** using **Spring Boot** and **Spring Cloud**, allowing the e-commerce platform to handle fluctuating user traffic seamlessly during peak events and promotions.
- Integrated **Hazelcast** as a distributed caching solution, accelerating access to critical product information, which reduced response times for users and minimized the strain on backend databases.
- Built **AWS-based solutions** for order management, inventory control, and secure transaction handling, which improved system performance, reliability, and cost-effectiveness in supporting e-commerce operations.
- Automated the deployment workflow using **Jenkins** and **Docker**, streamlining and accelerating the release cycle, and reducing the manual efforts required for maintaining consistent deployment environments.
- Designed and deployed secure **RESTful APIs** to integrate with third-party payment providers, enhancing payment processing capabilities while ensuring robust security and regulatory compliance for all transactions.
- Led the development of unit and integration tests for the platform using **JUnit** and **Mockito**, significantly increasing the test coverage, reducing bugs, and improving the stability of production releases.
- Enhanced the platform's security by implementing **OAuth2** and **JWT** protocols for secure user authentication, protecting sensitive customer data, and ensuring compliance with GDPR and PCI-DSS standards.
- Led the migration of legacy backend systems to a **microservices** architecture, allowing for more flexible and independent deployments, significantly improving both system uptime and developer efficiency.
- Worked closely with the product team to enhance the **recommendation engine**, which utilized machine learning algorithms to improve product recommendations, leading to higher customer satisfaction and increased sales.
- Optimized **AWS ECS** infrastructure for automatic scaling, ensuring application availability and high performance even during spikes in web traffic, while optimizing resource utilization and cost.

HubSpire

January 2020 – June 2021

Java Developer

Client Domain: SaaS and Digital Transformation

- Designed and developed a high-performance **SaaS solution** using **Spring Boot** and **AWS EC2**, automating customer onboarding processes and significantly reducing the time spent on manual deployment tasks.
- Built efficient, scalable **serverless functions** using **AWS Lambda**, enabling real-time processing of customer documents and reducing operational overhead by eliminating the need for constant server maintenance.
- Architected and implemented a robust **microservices platform**, decoupling various business functions into independent services, which allowed for better maintenance and easier management of individual components.
- Developed a distributed **session management** system utilizing **Hazelcast**, improving application performance and ensuring high availability across various services with consistent session data during user interactions.
- Enhanced **SQL database performance** by designing more efficient query structures and optimizing indexing strategies, resulting in faster data retrieval times for users across the platform.
- Leveraged **Docker** and **Kubernetes** to containerize application services, allowing for easier deployment, better scalability, and improved environment consistency across development, staging, and production environments.
- Automated infrastructure provisioning and deployment processes using **Jenkins** and **Terraform**, reducing manual effort and improving deployment speed by ensuring infrastructure is consistently reproducible.
- Integrated robust **security measures** using **OAuth2** and **JWT**, providing secure access control across the platform while protecting sensitive user data and adhering to industry compliance standards.
- Played a key role in optimizing the API layer to improve data exchange performance, ensuring that both client-facing applications and backend systems could efficiently communicate with minimal delays.
- Actively participated in **code reviews**, ensuring adherence to coding standards, promoting best practices across the team, and contributing to a more maintainable and scalable codebase.

VinnCorp

July 2015 – November 2019

Software Developer

Client Domain: Technology Services

- Played a pivotal role in developing a **distributed system** architecture using **Spring Boot**, which enabled enhanced modularity, easier maintenance, and improved system scalability in the client's large-scale enterprise platform.
- Improved **database performance** by optimizing critical **SQL queries** and introducing indexing strategies, which substantially decreased data processing times and allowed for faster report generation.
- Successfully implemented and deployed a comprehensive **microservices architecture**, which increased the flexibility and scalability of the platform, making it easier to deploy new features and improve system availability.
- Developed and deployed secure **RESTful APIs** for customer data management, ensuring all interactions between client applications and the backend were encrypted and protected using modern security protocols.
- Leveraged **Docker** to containerize application services, significantly improving the consistency of development, testing, and production environments, while reducing the chances of errors related to environment configurations.
- Integrated **AWS services** such as **EC2** and **S3** to build a scalable and resilient infrastructure, reducing infrastructure management complexity while maintaining high availability and performance across systems.
- Worked with the DevOps team to automate deployment pipelines using **Jenkins**, which reduced manual intervention, sped up the deployment cycle, and enhanced the overall efficiency of the development process.
- Contributed to migrating legacy systems to **cloud-based solutions**, ensuring the platform's architecture supported continuous growth, scalability, and high uptime in a rapidly evolving environment.
- Collaborated in **Agile sprints**, closely working with business analysts to gather requirements, which led to the timely delivery of key features and improvements to production.
- Participated in **code reviews** to ensure the overall quality and maintainability of the codebase, helping foster a culture of continuous improvement and knowledge sharing within the team.

The Flock

April 2013 – June 2015

Junior Software Developer

Client Domain: Start-up and Innovation

- Assisted in the development of a series of **Spring Boot**-based applications to streamline the management of customer transactions, improving the overall efficiency and speed of internal operations.
- Optimized **SQL queries** to reduce query execution times, enhancing the performance of core applications and reducing the load on the database during peak usage periods.
- Worked closely with senior developers to design and implement a secure **authentication framework** using **OAuth2** and **JWT**, which improved the overall security and user privacy across all applications.
- Contributed to the development of **unit tests** and enhanced test coverage, ensuring a more robust testing environment and reducing the occurrence of defects in production systems.
- Assisted in the creation of **Docker** containers, facilitating a smoother development process and ensuring consistent environments across all stages of deployment.
- Refactored existing code to improve application performance and reduce technical debt, which significantly improved the maintainability of the platform in the long term.
- Collaborated in the integration of **third-party APIs**, improving the functionality and extensibility of the application by connecting with external services and enriching the feature set.
- Supported the team in addressing and resolving critical production issues, ensuring minimal downtime and assisting in troubleshooting application errors during high-traffic periods.
- Actively participated in **code reviews** to ensure adherence to development standards and best practices, helping maintain a clean, high-quality codebase across the team.
- Gained valuable exposure to full-stack development processes by assisting in both front-end and back-end tasks, expanding knowledge and experience across the development stack.
