SUMMARY

Experienced Data and Machine Learning Engineer with a strong background in building and optimizing data pipelines, predictive models, and machine learning systems. Adept at deploying scalable solutions using cutting-edge technologies like TensorFlow, PyTorch, and Spark in cloud environments (AWS, Azure, GCP). Proven ability to integrate machine learning with financial data to detect fraud, optimize systems, and enhance decision-making processes. Extensive experience with data governance, security, and compliance, alongside a passion for leveraging AI to address key challenges in the financial industry. Let's connect if you are looking for an experienced engineer to drive impactful data solutions.

Key Skills:

Python, Artificial Intelligence(AI), Machine Learning(ML), Deep Learning, Data Science, Data Engineering, Generative AI, Cloud Computing, Natural Language Processing(NLP), Computer Vision, Algorithms, Data Structures, Docker, Kubernetes, Microservices, R, AWS, Azure, GCP, Big Data, Data analysis, MLOps, Pytorch, Tensorflow, Keras, scikit-learn, Apache Spark, Hadoop, Data Pipelines, AWS SageMaker, A/B Testing, Statistical Analysis, Predictive Modeling, Hyperparameter Tuning, Data Visualization, Feature Engineering, Tableau, Power BI, Large Language Model(LLM), Web application, Mobile application, HTML, CSS, C/C++, JavaScript, TypeScript, React, React Native, Java, Golang, Node.js, Angular, Django, Flask, FastAPI, Streamlit, Spring, Spring Boot, Kotlin, Express.js, PHP, PostgreSQL, MySQL, MongoDB, Oracle, Agile, CI/CD, REST, GraphQL, gRPC, Android, Git, Terraform, Linux, Mac OS, Jenkins, LangChain

SKILL

- Languages and Frameworks: Python, Go, Java, Django, Flask, FastAPI, Streamlit, SNOARQUBE, JavaScript, TypeScript, React, Vue, Angular
- Cloud Technologies: AWS(Glue, S3 bucket, EC2, SageMaker, Lambda, DynamoDB), GCP, Azure
- Data Analysis: NumPy, Pandas, SciPy
- DevOps: Docker, Kubernetes, Terraform, Bash script, CI/CD pipelines
- Machine Learning Frameworks: TensorFlow, PyTorch, Scikit-Learn, Spark/Pyspark
- AI/ML Services: Apache Airflow, Dataiku, Databricks, Snowflake, Tecton, Kafka
- LLM, Lora, Stable diffusion, Flux, NLP, Computer Vision, and other AI techs
- Database Management: SQL(MySQL, PostgreSQL, Oracle), NoSQL(MongoDB, DynamoDB, Cassandra), GraphQL
- Other Tools: gRPC, Jupyter Notebook, Redis, ETL, PowerShell, shell scripting, Node.js

PROFESSIONAL EXPERIENCE

MFS Investment Management, Senior Data Engineering Team Leader, Sep 2022 - present

- Led the design and development of advanced data pipelines for banking and financial data processing, focusing on ML systems and fraud detection, improving the detection rates by 25%.
- Collaborated with cross-functional teams to build scalable data infrastructure for financial transaction monitoring, ensuring compliance with regulatory standards and reducing false positive rates by 30%.
- Spearheaded the development of predictive models to detect suspicious financial activities using machine learning algorithms, improving model accuracy.
- Utilized Apache Spark, Kafka, and Hadoop to process and transform terabytes of structured and unstructured financial data, achieving faster data processing times and enhancing data accessibility for compliance officers.
- Developed and deployed machine learning models using TensorFlow and PyTorch to identify high-risk customers and transactions, automating fraud detection processes and reducing manual review workloads by 40%.
- Implemented advanced statistical analysis and anomaly detection techniques to enhance fraud risk modeling, identifying new patterns of financial crimes.
- Deployed machine learning models into production using AWS SageMaker, Azure ML, and Kubernetes, ensuring scalability and robustness in transaction monitoring systems.
- Optimized performance through hyperparameter tuning and model retraining, improving key metrics like precision, recall, and F1 scores for fraud prediction models.
- Led the design of real-time data monitoring dashboards using Tableau and Power BI, providing actionable insights to teams for quicker decision-making and response times.
- Mentored a team of data engineers and scientists, promoting a collaborative and knowledge-sharing environment in the Agile development process.

Bloomberg, Senior Machine Learning Engineer, United States, Oct 2019 – Aug 2022

- Designed, developed, and deployed machine learning models for predicting and analyzing large datasets, increasing model accuracy by 25% using scikit-learn, TensorFlow, and PyTorch.
- Built and optimized data pipelines using Python and SQL, cleaning and preprocessing large datasets from SQL/NoSQL databases (e.g., PostgreSQL, MongoDB, Google Cloud Storage) to feed into machine learning models.
- Deployed models into production using AWS SageMaker and Docker, creating automated workflows that continuously monitor model performance and retrain as needed.
- Collaborated with cross-functional teams (data engineers, data scientists, and product managers) to define project requirements and develop scalable solutions that meet business goals.
- Used Keras to develop deep learning models for image classification and NLP tasks, achieving up to 90% accuracy for complex data sets.
- Applied Natural Language Processing (NLP) techniques including text classification, sentiment analysis, and named entity recognition (NER) to extract insights from unstructured text data.
- Conducted A/B testing and hyperparameter tuning to optimize model performance and evaluated models with metrics like precision, recall, F1 score, and ROC-AUC.
- Utilized version control (Git), CI/CD pipelines, and automated testing to ensure reliability and reproducibility of machine learning pipelines.
- Engaged in continuous learning, staying current with the latest machine learning techniques and technologies to apply cutting-edge solutions to real-world challenges.

SiriusXM, Machine Learning Engineer, USA, Jan 2018 – Sep 2019

- Analyzed large datasets using Python, R, and SQL, providing actionable insights that led to a 15% increase in overall business efficiency.

- Built and deployed predictive models using machine learning algorithms (e.g., linear regression, decision trees, random forests, XGBoost) to forecast customer behavior and optimize product recommendations.
- Developed and implemented data preprocessing pipelines, including data cleaning, feature engineering, and normalization, improving model accuracy by 20%.
- Optimized model inference times by implementing distributed training and inference pipelines on AWS SageMaker, reducing operational costs and improving scalability for large-scale generative AI applications.
- Applied statistical analysis and hypothesis testing to assess the impact of business decisions, identifying key trends and correlations within the data.
- Leveraged Natural Language Processing (NLP) techniques to analyze text data for sentiment analysis and topic modeling, improving customer feedback understanding by 25%.
- Visualized complex datasets using Tableau and Matplotlib to create intuitive dashboards and reports that enhanced decision-making for stakeholders.
- Collaborated with data engineers to design and maintain ETL pipelines, ensuring smooth data flow between various databases such as MySQL, PostgreSQL, and MongoDB.

EDUCATION

Bachelor's degree of Science (Computer Science), 2012 - 2016
Amberton University, TX, US
