Summary

Software Engineer with 4 years of experience in building software, applications, and services using C#, Angular, React, Agile methodologies, CQRS, and MVC architectural patterns. Expertise in designing and implementing scalable microservices architectures and RESTful APIs, applying Object-Oriented Programming (OOP) principles and design patterns to deliver modular and maintainable solutions. Skilled in creating dynamic, user-friendly interfaces with Angular and React, as well as developing robust back-end systems with C#. Proficient in leveraging containerization technologies like Docker and utilizing AWS for efficient cloud deployments and minimal downtime. Demonstrates a strong commitment to enhancing user experience, ensuring system reliability, and maintaining robust security protocols throughout the development lifecycle.

Skills

**Object Oriented Programming (OOP) • Testing / Monitoring / Troubleshooting SOLID Principles
Code Review & Optimization • Domain-Driven Development (DDD).
• Design Patterns • Microservices Architecture •**

Languages: C#, Java, Python

Web: HTML, CSS, SCSS, SASS, NX, Jasmine, JavaScript, JQUERY, Bootstrap, Anuglar12, Rymda, React-Admin

Web Services: REST, GRPC, SOAP

Frameworks: .NET Core, ASP .NET Core, ASP.NET MVC, MAIU, Blazor, .NET WEB Form, XAML, ETL Talend, WPF.

Databases: Microsoft SQL Server (MSSQL), T-SQL, MySQL, Postgres, MongoDB, DynamoDb

Design Patterns: Command, Visitor, Composite, Iterator, Singleton, Factory Pattern, Decorator, Proxy.

SDLC: Agile / Crystel, XP, KANBAN, LEAN, Scrum, Waterfall, RUP, TDD

Tools: Postman, Lambda, RabbitMQ, KAFKA, Git, S3Bucket, Visual Studio, GraphQL, IIS, Figma, XML, JSON, Swagger, StarUML

Cloud Computing : GRAFANA, KUBERNETES, CICD, Container, Microservices, AWS, Azure

Platforms: Windows, Linux, Cloudera, CentOS, Kali Linux

Big Data: Hadoop, Pig, Spark, ElasticSearch, MapReduce, Sqoop, Flume

Work Experience

POULINA GROUP HOLDING

Tunis, Tunisia

Mid-Level .Net developer

Jul 2021 - Jul 2023

- **Engineered and maintained** a .NET Core microservices architecture for a comprehensive timesheet and project management system, achieving a 35% boost in scalability and a 20% increase in operational efficiency.
- **Developed RESTful APIs and asynchronous services** with .NET 5 and C#, ensuring efficient inter-service communication, improved system integration, and data consistency.
- **Built responsive, dynamic frontend interfaces** with Angular 15, seamlessly integrated with Web API, reducing front-end load times by 20% and elevating the user experience.
- **Optimized MS SQL database queries** for the timesheet functionality, enabling fast, seamless data storage and retrieval.
- **Created a data visualization tool with Power BI**, reducing decision-making time by 25% while ensuring 100% accuracy in reporting and customer information.
- **Implemented CORS** in the ASP.NET Core Web API to allow a web application to be called from other domains.
- **Secured the system** with token-based authorization, robust exception handling, and JWT logging, ensuring strong security measures and effective error management.
- **Employed Postman** for comprehensive API testing, including the automation of regression tests to streamline the verification process of new features and updates.
- **Collaborated with cross-functional teams** including product owners, scrum masters, and business analysts to gather, estimate, and prioritize requirements, aligning project milestones with business objectives.
- **Participated in architectural review sessions**, contributing to strategic design decisions that maintained high code quality and system performance.
- **Adopted Test-Driven Development (TDD)** methodologies with RESTful APIs, which enhanced code reliability, reduced bugs, and facilitated more stable releases.

- **Developed and maintained** a comprehensive travel agency management system using **.NET 5/C# for backend microservices** and **React with TypeScript for the frontend**, delivering a responsive, feature-rich user experience and improving operational efficiency by 40%.
- **Designed and implemented robust databases** with MySQL and MSSQL, reducing data retrieval times by 25% and enabling efficient handling of booking, client, and package data for seamless agency operations.
- **Enhanced UI/UX** by building interactive interfaces with **React, HTML, CSS, and Bootstrap**, leading to a 35% increase in customer engagement and user satisfaction.
- **Secured the application** by integrating **JWT-based authentication** and **Identity library** in .NET for user identity management, ensuring secure access and enhancing compliance with industry security standards by 40%.
- **Implemented API documentation** using **Swagger**, facilitating seamless integration with third-party systems and improving API transparency for developers and stakeholders.
- **Leveraged Git for version control** and **containerized applications using Docker**, accelerating deployment processes and optimizing development workflows, reducing release times by 20%.
- **Utilized object-oriented programming (OOP) principles** to create modular, maintainable code, achieving a 30% improvement in code reusability and maintainability.
- **Collaborated in architecture and solution design** sessions, focusing on scalable and efficient system design to support business growth and flexibility for future integrations.
- **Conducted rigorous debugging and troubleshooting** to ensure application stability and performance, decreasing bug-related issues by 25%.
- **Engineered a microservices architecture** with **API gateway and service registry**, integrated distributed tracing using Microsoft Trace to monitor and enhance system reliability and performance tracking.

Academic Projects

Maharishi International University (2024) Custom Java Framework for Implementing Spring Design Patterns: Developed a custom Java-based framework replicating Spring framework functionalities, focusing on serverside design patterns like Singleton, Factory, Observer, Dependency Injection, Template Method, and Proxy. Provided hands-on experience in framework development and architectural design. Utilized Java, Design Patterns (Singleton, Factory, Observer, Dependency Injection, Template Method, Proxy).

Maharishi International University (2024) - Social Media Post Management Application: Developed a web application that allows users to create, manage, and interact with posts similar to a social media platform like Facebook. The application was built using React for the front end, TypeScript for type-safe JavaScript development, and Express.js for the back end, providing a seamless user experience for posting and managing content online. Utilized React, TypeScript, Express.js, CSS.

Maharishi International University (2024) Big Data Project: Implemented a stock data system with Kafka for real-time ingestion into Spark Streaming, storing in HBase and HDFS. Applied Spark SQL for analytics and used Jupyter Notebooks for data visualization, exploring stock insights. Tools used: Jupyter, Cloudera, Kafka, Spark Streaming, HBase, Spark SQL, HDFS.

Maharishi International University (2023) Automatic track attendance: Led the creation of an AI-based Automatic Attendance System using machine and deep learning for accurate face recognition and tracking. This efficient solution simplifies attendance management across various settings. Used: Python, Deep Learning, Machine Learning.

Education

Maharishi International University
Master's in Computer Science

Fairfield, IA

Private Higher School of Engineering and Technology ESPRIT
Bachelor of Science in Computer Engineering

Ariana, Tunisia
