

# SAI TEJA MEKA

Location: MO, USA | Phone: +1 (913)238-5526 | E-mail: [saiteja.meka1705@gmail.com](mailto:saiteja.meka1705@gmail.com) | [LinkedIn](#)

## SUMMARY

Results-driven SDET/QA Automation Engineer with 6+ years of experience in test automation, security testing, and DevOps integration. Expertise in designing scalable automation frameworks (Selenium, Cypress, Playwright), ensuring compliance with SOC 2, HIPAA, and PCI DSS, and integrating test automation within CI/CD pipelines (Jenkins, GitHub Actions, Terraform). Proven track record of reducing defects by 35%, accelerating test cycles by 40%, and enhancing system performance by 30% through automation and performance testing. Passionate about leveraging AI-driven testing, cloud-based automation, and security best practices to improve software quality.

## TECHNICAL SKILLS

|                                    |                                                                                                                                                                                                                            |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Programming Languages & Frameworks | Java (TestNG, JUnit, Selenium WebDriver, REST Assured), Python (PyTest, Selenium), JavaScript (Node.js, Cypress, Playwright)                                                                                               |
| Test Automation & Frameworks       | Selenium WebDriver, TestNG, JUnit, Cypress, Playwright, REST Assured, JMeter                                                                                                                                               |
| Database Testing                   | PostgreSQL, MySQL, Oracle, MongoDB, SQL (Queries, Joins, Stored Procedures, Data Integrity Validation)                                                                                                                     |
| API & Backend Testing              | Postman, REST Assured, SOAP UI, Swagger, OAuth 2.0, JWT Authentication                                                                                                                                                     |
| Performance & Security Testing     | JMeter (Load & Stress Testing), OWASP ZAP, Burp Suite (Penetration Testing), Wireshark                                                                                                                                     |
| Cloud & DevOps Integration         | AWS (EC2, S3, Lambda, CloudWatch), Azure (Active Directory, Storage), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions                                                                                               |
| Defect Management & Agile Tools    | JIRA, TestRail, Confluence, Agile/Scrum Methodologies, Sprint Planning, Defect Tracking, Test Case Management                                                                                                              |
| CI/CD & Infrastructure Automation  | Jenkins, GitHub Actions, Infrastructure as Code (IaC), Automated Testing Integration                                                                                                                                       |
| Compliance & Security Standards    | SOC 2, HIPAA, PCI DSS, NIST, FHIR Compliance, OWASP Top 10, Secure Coding Best Practices                                                                                                                                   |
| Domain Knowledge                   | Academic Publishing & Research Services, CRM Integration, Banking (ATM software and hardware), Embedded Products, Point of Sale (POS) systems, Insurance applications, Healthcare IT Security, Airline & Travel Technology |

## PROFESSIONAL EXPERIENCE

LME Services, USA

Aug 2024 – Present

QA Analyst

- Developed and maintained an **automated testing framework** using **Selenium, Java, and TestNG**, reducing manual testing efforts by **40%** and improving test accuracy.
- Created and executed **functional, regression, and exploratory test cases**, ensuring **100% compliance with SOC 2, HIPAA, and NIST security standards**.
- Performed **API testing using Postman and REST Assured**, validating authentication mechanisms and improving API security against vulnerabilities.
- Conducted **security and penetration testing using OWASP ZAP and Burp Suite**, identifying and mitigating **30% of security risks** before deployment.
- Integrated **automated security validation in CI/CD pipelines (Jenkins, GitHub Actions)**, enabling **continuous testing and accelerating release cycles**.
- Led **performance testing using JMeter**, improving **system response times by 30%** and ensuring scalability under high traffic conditions.
- Collaborated with **developers** to log and resolve defects in **JIRA**, achieving a **25% faster defect resolution rate**.
- Enhanced test coverage** by implementing **data-driven and keyword-driven automation frameworks**, reducing defect leakage by **35%** and improving overall software reliability.
- Prepared **test reports and compliance documents**, streamlining **security audits and regulatory adherence**.

Cactus Communications, India

Dec 2021 – Aug 2023

Software Test Engineer

- Implemented **Playwright** for end-to-end **UI automation testing**, reducing flakiness in cross-browser testing by **30%** and improving test execution speed across Chrome, Firefox, and WebKit.
- Designed and executed **functional, regression, API, and UI test cases**, ensuring **95% test coverage** across web and mobile applications.
- Achieved **40%** product revenue growth in four months by launching three new key features using **a/b testing**.
- Performed **cross-browser and mobile testing** using **BrowserStack** and **Selenium Grid**, validating compatibility across **Chrome, Firefox, Edge, iOS, and Android** devices.
- Led **Stripe payment gateway testing**, executing **positive, negative, and edge case scenarios** to ensure **100% secure transactions** across multiple payment methods.
- Conducted **API testing using Postman and REST Assured**, validating **system integrations and response time**.
- Carried out **database testing with SQL in PostgreSQL**, identifying and resolving data integrity issues, improving system reliability by **99%**.
- Monitored **application performance and logs using Graylog and New Relic**, proactively identifying and resolving issues, reducing downtime by **20%**.

Senior QA Analyst

- Executed comprehensive functional, regression, UI, and security tests for ATM software, ensuring seamless transaction processing across Octava and DN-Series (DN-200, DN-400) ATMs and improving test coverage by 30%.
- Configured and managed **daily build processes**, optimizing the **CI/CD pipeline**, reducing build failures, and enhancing deployment efficiency by 20%.
- Automated UI test cases using **Cypress with BDD (Cucumber)**, enhancing test coverage and reducing manual effort by 30%.
- Utilized **ATM simulators** to replicate real-world transaction scenarios, validating key functions like **cash withdrawals, deposits, PIN changes, and balance inquiries**, while proactively testing failure scenarios such as **power outages and network disruptions**.
- Conducted **network security testing using Wireshark**, analyzing **transaction traffic**, identifying vulnerabilities, and ensuring compliance with **PCI DSS standards** to strengthen security protocols.
- Collaborated cross-functionally with **developers, business analysts, and stakeholders** to define **test strategies**, optimize defect resolution through **Jira**, and improve overall **software quality**.
- Led **user acceptance testing (UAT) sessions** to validate software stability, provided feedback to stakeholders, and ensured product readiness for deployment, reducing post-production defects.
- Mentored and guided **junior QA analysts**, improving **team efficiency by 25%** through knowledge sharing, structured documentation, and best practices in test automation and execution.

Capgemini Technology Services India Limited – AXA Partners

May2019– March 2020

QA Analyst

- **Developed an automated testing framework** using **Selenium WebDriver (Java - Page Object Model)**, increasing test efficiency by 30% and reducing manual effort.
- Executed **functional, regression, and UI test cases**, achieving a **99% defect detection rate** while ensuring seamless claims processing.
- **Implemented automated batch execution for insurance claims**, improving processing speed and reducing manual intervention by 40%.
- **Conducted cross-browser and responsive testing** across **Chrome, Firefox, Edge, and Safari**, ensuring compatibility and optimal user experience.
- **Managed and tracked 250+ defects in JIRA**, collaborating with development teams to prioritize and resolve critical issues, reducing defect resolution time.
- **Integrated Selenium test scripts with CI/CD pipelines (Jenkins)**, enabling continuous testing, early defect identification, and improved software quality.
- **Implemented API testing using Postman and RestAssured**, validating system integrations, data accuracy, and enhancing backend reliability.
- **Maintained version control and optimized automation scripts using Git**, improving collaboration efficiency by 15% and ensuring script reusability.

Hexaware Technologies, Ind

May 2018 – Apr 2019

QA Analyst

- Conducted **functional, system, integration, and regression testing**, achieving a **30% decrease in time to market** for new features.
- Conducted **end-to-end functional, regression, integration, and UAT testing** for AI-driven self-service kiosks, airline booking platforms, and baggage tracking systems, ensuring **98% defect resolution** and seamless user experience.
- Validated **API test cases** using **Postman** and **REST Assured** to check airline booking system integrations and payment gateway transactions, ensuring **100% secure and compliant transactions**.
- Led **GDPR compliance testing**, ensuring data security for **airline ticketing and baggage tracking systems**.
- Conducted **performance testing using JMeter**, optimizing system response time by 30% and ensuring **100% uptime** during peak travel seasons.
- Carried out **mobile testing (Android/iOS)** using **Browser Stack** to validate self-service check-in, mobile ticketing applications, and RFID-based baggage tracking, reducing lost baggage incidents by 40%.
- Developed detailed **test documentation, test plans, and JIRA dashboards for defect tracking**, reducing defect leakage by 20% through early-stage identification and root cause analysis.

## TRAINING AND CERTIFICATIONS

- **Certified with ISTQB Foundation Level.**
- **Received Training on automation** by using **selenium** from **Capgemini**.
- **Trained on BDD Automation** from **Cactus**.

## EDUCATION

**Master in Cyber Security**

University of Central Missouri, Warrensburg

Dec 2024

**B. Tech in Computer Science Engineering**

GITAM University, Hyderabad

Apr 2018
