SUMMARY

When not persuading microservices to play nicely, I'm busy creating intuitive, responsive interfaces using frameworks like React and Angular that truly resonate with users. I specialize in designing secure, scalable applications utilizing technologies such as Java and Spring ecosystem, while integrating CI/CD pipelines with tools like Jenkins and Docker. With a keen eye on security, scalability, and a rapidly depleting snack drawer, I build solutions that satisfy both product owners and end-users. If you need code that's built to last (and break fewer things on deployment), we'll get along just fine!

SKILLS

- **Key Technologies:** Spring Boot, Java 17, MySQL, Angular, React, TypeScript, Hibernate, AWS (EC2, ECS, SQS, Lambda), Docker, Jenkins, Nginx, SSL, Agile/Scrum, JavaScript, Spring Security, Apache Kafka, Spark, Pivotal Cloud Foundry, REST, Maven, AngularJS, Spring MVC
- **Version Control:** Git, GitLab
- **CI/CD:** Jenkins, Maven
- **Cloud & DevOps:** AWS (EC2, ECS, Lambda, SQS), Docker, Nginx, Pivotal Cloud Foundry
- **Agile/Scrum:** Daily stand-ups, sprint planning, retrospective ceremonies
- **Testing & Quality:** JUnit, Mockito, TDD, Integration Testing

EXPERIENCE

Paychex

Feb 2024 - Present

Full Stack Developer

Rochester, NY

- Developed and maintained React (TypeScript) front-end components for payroll and HR solutions, ensuring a seamless user experience with responsive design.
- Built RESTful microservices in Java 17 using Spring Boot and Hibernate to handle high-volume data processing and secure financial transactions.
- Deployed applications on AWS EC2 and ECS, using AWS SQS and AWS Lambda for asynchronous processing and event-driven workflows.
- Integrated Jenkins pipelines for CI/CD, automating builds, tests, and deployments, reducing release times significantly.
- Secured production environments with SSL/TLS, Nginx reverse proxy configurations, and robust OAuth2 authentication to protect sensitive payroll data, enhancing data security and compliance
- Employed Docker containers to streamline development and deployment, improving portability and consistency across environments.
- Oversaw database migrations in MySQL, optimizing queries and ensuring transaction integrity across multiple microservices.
- Worked in an Agile/Scrum environment, regularly participating in sprint planning, code reviews, and daily stand-ups.

GE Healthcare

Nov 2022 - Dec 2023

Software Developer

Milwaukee, WI

- Led front-end development with Angular to build dynamic dashboards for medical device status, enabling clinicians to monitor equipment in real time.
- Created secure REST APIs using Java 17, Spring Boot, and Spring Security, ensuring HIPAA-compliant data protection for patient-related information.
- Implemented microservices architecture, deploying containerized services via AWS ECS; utilized AWS Lambda(Java) and SQS for asynchronous job processing and event-driven tasks.
- Configured CI/CD pipelines using Jenkins to automate testing, packaging, and deployment, accelerating release cycles while maintaining high-quality standards.
- Orchestrated data persistence with Spring Data JPA and MySQL, applying advanced query optimizations for critical healthcare records.
- Utilized DevOps best practices to troubleshoot production issues using logs, metrics, and distributed tracing, ensuring system reliability
- Employed Agile methodologies by participating in Scrum events and coordinating cross-functional teams, leading to on-time project deliverables

Blackboard

May 2021 - Nov 2022

Full Stack Developer

Phoenix, AZ

- Developed robust React front-end modules for e-learning platforms, implementing responsive UIs and enhancing user interaction and satisfaction
- Created microservices with Spring Boot, integrating with third-party educational tools via RESTful APIs, ensuring real-time data syncing.
- Employed Apache Kafka and Spark to process large volumes of streaming educational data, improving analytics throughput.
- Deployed containerized applications using AWS ECS and performed continuous monitoring and scaling to accommodate seasonal usage spikes.
- Implemented a Test-Driven Development (TDD) approach with JUnit and Mockito, achieving high code coverage and reducing post-release defects.
- Collaborated in Agile ceremonies, refining user stories and ensuring timely feature delivery with consistent sprint velocities.

United Airlines

Nov 2019 - Apr 2021

Full Stack Developer

Chicago, IL

- Built and maintained Angular 8 applications for booking and reservation systems, improving user flows for seat selection and flight management.
- Created Spring Boot services for flight scheduling, ticket pricing, and notifications, optimizing performance via caching strategies.
- Employed AWS Lambda functions to send real-time flight alerts, significantly enhancing customer satisfaction.
- Used Docker containers to standardize environment setups, enabling quick replication of production-like conditions in local development.
- Improved front-end performance by implementing lazy-loading modules and asynchronous data fetching in Angular, minimizing load times on slow networks.
- Collaborated with QA, PMs, and business stakeholders in Scrum ceremonies to refine product backlogs, enhancing team alignment and project clarity

Fidelity Investments

Feb 2019 - Oct 2019

Java Developer

Dallas, TX

- Developed high-availability financial applications using Angular 6 for the front end and Spring Boot microservices for the backend.
- Leveraged J2EE design patterns (Value Object, Business Delegate) to ensure scalability and maintainability across retirement planning apps.
- Deployed services to Pivotal Cloud Foundry, adhering to financial regulatory requirements and guaranteeing robust disaster recovery setups.
- Utilized Hibernate for ORM, optimizing database operations and ensuring entity relationships were mapped accurately.
- Implemented RESTful APIs for internal data exchange, enabling seamless integration with partner financial institutions.

AT&T

Aug 2018 - Feb 2019

Junior Developer

Dallas, TX

- Contributed to customer-facing portals using AngularJS and Spring MVC, enhancing the customer service dashboard for improved responsiveness.
- Implemented Java 8 features like lambda expressions for streamlined back-end processing and concurrency handling.
- Maintained RESTful APIs to enable real-time data retrieval, reducing latency in telecommunications service provisioning.
- Utilized Hibernate for data persistence, ensuring stable integration between front-end applications and back-end databases.
- Automated build and deployment processes with Maven, ensuring reliable package management and version control.

EDUCATION

The University of Texas at Tyler

Bachelor of Science, Computer Science, Mathematics

- **GPA:** 3.97/4.00
