ANDROID DEVELOPER

Professional Summary

- **5+ years** of experience as an **Android Developer** in developing **Android applications** using **Kotlin and Java**.
- Worked with **Activities, fragments, Android Binding, support library, Android animation framework, AsyncTask, Intents, Services, broadcast receivers, REST API, Location Manager, and threads**.
- Proficient with common Android framework APIs (**Location, Camera, Notifications, Maps**).
- Expert in Software Development Life Cycle (**SDLC**), object-oriented analysis, and design methodologies.
- Experienced in building Android apps from scratch, familiar with Android architecture like **MVC, MVP, and MVVM**.
- Expertise in developing apps using **SQLite, Java, XML, Google Maps API, and GPS Location Data**.
- Experienced in implementing project libraries like Android Support Library, **Dagger, Butter Knife, Event Bus, View Pager, RxJava, ORM-LITE**, and other common libraries in multiple applications.
- Developed unit tests and integration tests using **Junit and Mockito frameworks**.
- Experienced in using **Fragments, Activity workflow, ActionBar Navigation, Menu designs** and view controls, and Loaders.
- Experienced in utilizing communication between common data between apps over network requests using **Retrofit**.
- Possess advanced Android development skills with open-source libraries (**Okhttp, Retrofit, Dagger2, RxJava, Picasso**).
- Experienced in integrating **Android JetPack** components like **ViewModel, Room, LiveData, etc.**
- Integrated applications to **Firebase** (Firebase Analytics, Crashlytics, Firebase Performance Monitoring).
- Experienced in using a **dependency injector called Dagger** to test the classes in multiple applications.
- Worked on **Swagger API** and auto-generated documentation for all REST calls.
- Used **Github for version control** and **Jenkins for continuous integration**.

Skills

- **Languages:** Java, Kotlin
- **Android App Mobile Development:** Android SDK, Jetpack, Dagger2, RxJava, Camera API, Facebook API, Java JDK, Activities, RecyclerView, ListViews, Adapters, Horizontal scrolling, Notification Manager, Content Provider, Location, Map, Swagger
- **Databases:** SQLite, MySQL, Firebase, Shared Preference, RoomDB
- **Design Patterns:** MVVM, MVC, Clean architecture
- **Debugging and Testing Tools:** JUnit, Logcat, XML, JSON, Mockito, Espresso, Selenium IDE, Django
- **Web Services & Parsing Techniques:** Retrofit, SOAP, REST & XML (SOAP API), JSON (RESTful API)
- **Project Management Tools:** JIRA, Rally, Agile / Scrum
- **Version Control:** GIT/ GITHUB, BitBucket, SVN
- **Other:** AWS, GCP, Cloud Infrastructure

Education

HIGH SCHOOL DIPLOMA
BILINGUAL PASTOR RAUF

- Responsible for **SERVICES, ASYNC tasks, and Alert Notification API** to implement event reminder feature into the mobile app.

Experience

ANDROID DEVELOPER

Peloton Interactive, Brooklyn, NY

Oct 2021 - Present

https://play.google.com/store/apps/details?id=com.onepeloton.callisto&hl=en_IN

- Addressed and resolved critical bugs in the shared Bluetooth library, ensuring more reliable and consistent Heart Rate Monitor data connections for users, enhancing workout tracking accuracy.
- Worked on the offline functionality using Room Database, allowing users to access saved workout plans, progress, and activity history even without an internet connection.
- Implemented data synchronization mechanisms to automatically update local data with server data when connectivity is restored, ensuring a seamless user experience.
- Implemented Dagger Hilt for dependency injection, ensuring a clean and modular architecture that improved code maintainability and scalability.
- Ensured that all code followed clean architecture principles and was designed to be highly maintainable and test-friendly.
- Utilized unit testing and integration testing frameworks like JUnit and Mockito to ensure that each feature was thoroughly tested, minimizing bugs.
- Collaborated with backend teams to optimize GraphQL queries for delivering real-time workout data, user profiles, and class recommendations within the app.
- Collaborated closely with cross-functional teams to ensure features were aligned with business objectives and delivered on schedule.
- Ensured that each stage of development adhered to high-quality standards, resulting in a smooth and successful app deployment.
- Optimized the app to use location data efficiently to preserve battery life while delivering accurate, real-time data for users' outdoor activities.
- Maintained the MVVM (Model-View-ViewModel) architecture across various features in the app, ensuring a clear separation of concerns.

ANDROID DEVELOPER

Bleacher Report, San Francisco, CA

Nov 2020 - Sep

2021

https://play.google.com/store/apps/details?id=com.bleacherreport.android.teamstream&hl=en_IN&gl=US

- Responsible for maintaining and adding new features for the Android version of the Bleacher Report app.
- Implemented redesigned team stream UI on Android.

- Created Community feature enabling users to post text, images, gifs, and videos within a team community.
- Converted Java classes to Kotlin and added missing unit tests.
- Converted local databases from Realm to Room.
- Created Kotlin extension functions for frequently used UI features and animations.
- Optimized app performance by reducing memory usage and improving load times through effective use of Kotlin Coroutines and Jetpack components, resulting in a smoother user experience during high-traffic events.
- Collaborated with cross-functional teams including UX/UI designers and backend developers to ensure seamless integration of new features and alignment with product goals.
- Refactored dependencies in existing classes to increase isolation making unit tests easier to write and remove the need for Robolectric.
- Conducted extensive code reviews to ensure adherence to best practices, maintaining a clean and modular codebase, and improving overall code quality and maintainability.

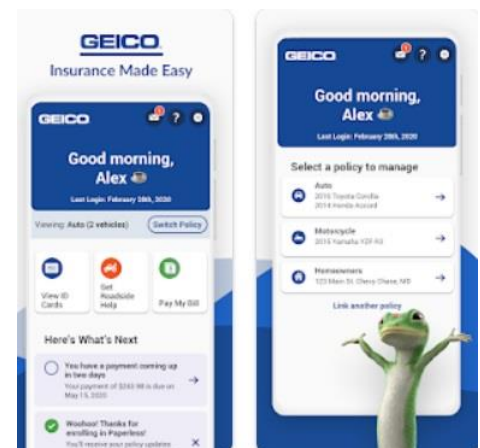

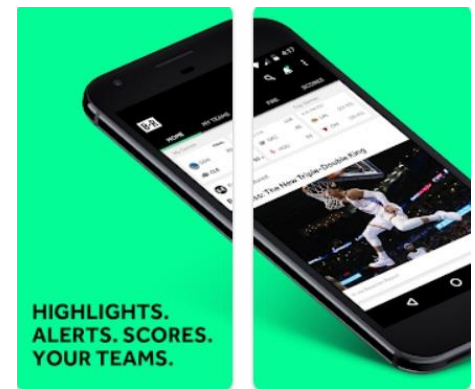

ANDROID DEVELOPER

GEICO Insurance, Seattle, WA

Aug 2019 - Oct 2020

https://play.google.com/store/apps/details?id=com.geico.mobile&hl=en_IN&gl=US

- Responsible for including project planning and management, mentoring, developing leadership skills, evaluating associate performance.
- Involved in all the phases of SDLC and developed the application in an agile environment.
- Assisted the SCRUM master in planning sprints.
- Implemented different UI layouts to create user friendly interface in the app.
- Used fragments to build small reusable pieces that are easier to manage and allow for a more fluid visual design.
- Used services for downloading the payment details.
- Implemented Broadcast receivers for sending notifications to the user when the download is finished.
- Participated in architecting and re-writing GEICO's web-based policy-

service application for mobile web browsers.

- Developed features like DIGITAL ID CARDS, BILL PAY options and ROADSIDE ASSISTANCE in the app.
- Provided GEICO's customers more power to manage their insurance policies as well as provided a lighter, more engaging interface.
- Used JUnit Extensions for writing test cases.
- Used GitHub as Version Control to push and commit changes in the code.

April 2019 - Aug 2019

FREELANCING PROJECTS

Android Developer

DogLiker

- An android mobile app that shows a random picture requested from the Dog API. User can change the picture and like it and Sign Up/ Log In to save the pictures upon liking them.
- Used Firebase for authentication and to store the pictures with firestore.
- Learned to use Jetpack Compose and animations.

Technical Skills: Dagger Hilt / Coroutines / MVVM / Firebase / Jetpack Compose.

InventoryApp

- An app that helps to track different items and balance of the users.
- Used a Calendar to know what the user bought and sold each day and dynamically shows the days made a profit or loss. It also allows to create, delete and update user items.
- Learned to use Room as well as to create instrumentation tests with JUnit4.

Technical Skills: Room / Clean Architecture / JUnit4 / Jetpack Compose.

CryptoApp

- An app that uses the Coin Gecko API to show a list of cryptocurrencies. Users can then click on each individual coin to get details of that specific cryptocurrency.
- Learned about MVVM, Clean Architecture and the importance of separations of concerns. Also learned how to effectively use RecyclerViews and interact with each item.

Technical Skills: Retrofit2 / Clean Architecture / Flow / RecyclerView / Fragments.
