

SUKUMAR NAIR
6 Northwoods Circle, Woburn, MA 01801
Phone: 781-281-2325. E-mail: SLJ2332@gmail.com

Summary: Experienced in developing software solutions using current standards and technologies for various industries, including healthcare and finance. Proficient in database (Power BI/SSRS/SSIS/SQL Server) and .NET development. Knowledgeable in complete lifecycle of software products including data analysis, visualization, reporting, design, code development, enhancement, troubleshooting, integration, implementation, testing and documentation. Dedicated professional willing to do what it takes to get the job done, who enjoys learning new programs and techniques. Excellent problem solving, communication, collaboration and negotiating skills.
A US citizen with a Ph.D.

Technical Skills: Experience in the following:
Power BI and MS SQL Reports (SSRS): 8+ years.
ETL tools (SSIS/Power BI) and strategies: 8+ years
RDBMS (MS SQL Server 2008R2 – 2016) and Data Warehouse development: 9+ years.
MS SQL Stored Procedures and PL/SQL: 8+ years.
C/S Applications & Web Development (VB.NET/C#, ASP.NET, VBScript, JavaScript, HTML, CSS): 7+ years.
Automation of manual jobs; SQL Server Agent: 4 years.
Proficient with Power BI data visualization tools, including Power Query, DAX, and Power BI Service.
Skilled in data modeling and data analysis; worked with AI tools; familiar with Agile and Waterfall methodologies.
Good knowledge of Visual Studio, Team Foundation Server (TFS), Visual SourceSafe, JIRA, and StarTeam.
Working knowledge of HIPAA regulations and Medical Software/Billing Applications.

Soft Skills: Integrity, Self-Motivation, Flexibility, Detail-oriented, Organization and Time/Project management skills, Ability to work well under stress without supervision, Excellent Communication and Negotiating skills.

RELEVANT WORK HISTORY:

SENIOR DEVELOPER, (Remote), CVS Health, Woonsocket, RI (1/2020 – 12/2023)

- Used Power BI to connect to data sources (databases, CSV files, spreadsheets, online services, etc.), import/transform data, and build data models; wrote Data Analysis Expressions (DAX) for accurate data analysis and reporting.
- Performed data cleansing using Data Quality Services (DQS), transformed, and loaded it to our Data Warehouse database.
- Developed visual reports, KPI scorecards and dashboards in Power BI, which were tailored to different user requirements; created 'Calculated Columns' and 'Measures' using DAX to enable meaningful analysis and data-driven decision-making.
- Some of the Power BI reports had bookmarks, advanced filtering, drill throughs and multiple complex visualizations.
- Implemented Row-level Security (RLS) by defining/testing static and dynamic roles with DAX, to restrict data access to specific users or groups. Also created Q&A and mobile design for these reports.
- Power BI Service was used for setting up data gateways, dataflows, semantic models, refresh schedules, dashboards, data-driven alerts, and quick insights; did administrative tasks (Tenant settings), publishing, sharing, and collaborating.
- Developed, enhanced, modified, and deployed several SSRS reports and SSIS packages per new requirements.
- The ETL process involved extracting data from CSV/Flat files using SSIS packages and loading to tables on a SQL Server database after validation.
- SSRS was used to generate the reports; SQL Server jobs were used for automating the program. Similar approaches were taken in implementing another pilot project, Polaris Reporting System, and in Data Warehousing environment.
- Created/alterd and scheduled subscriptions; the reports were delivered by email or file Share, in Excel or PDF formats.
- Post-IVR survey reports, which were very critical to some internal CVS business teams and clients, were not functional for the few years before my joining CVS; so, I redesigned those reports and got them up and running. Worked with different teams to resolve the issues: helped the App Dev team to identify and resolve problems in data transfer; assisted DBA team to detect and solve some unusual errors in their SSIS processing. Now these reports are executing automatically and being successfully delivered to the clients at regular intervals.
- Assisted the team to create/update reports during the 'Welcome Season'. After my joining this team, unlike their poor tradition, they now have the best Welcome Season ever.
- Helped other developers in their SQL/SSIS/SSRS/Power BI tasks – working in an Agile development environment.
- Fulfilled various urgent ad-hoc, CMS Audit report requests, to ensure timely distribution to various clients.

ETL DEVELOPER-III, Beacon Health Options, Boston, MA (1/2015 – 12/2019)

- Designed, developed, tested, and deployed new or modified ETL programs (SQL/SSIS) for EDI, to load inbound data files to our database and to create outbound files for sending to clients.
- Created and modified Stored Procedures, functions and other SQL database objects to implement business logics, and to support dataflows through application infrastructure; wrote queries for data extraction in ad-hoc requests.
- Monitored and performed troubleshooting SQL jobs and related applications in a timely manner.
- Created new reports as a part of SSIS programs. Supported the BSA to define BRDs, and in QA testing.
- Developed Web apps using ASP.NET 2.0 (Visual Studio, XML, JavaScript) for a file conversion program.
- Responsible for setting up automatic transmission of data from our SQL server to client databases. Java/VB scripts, Stored Procedures, SSIS packages and SQL Server Jobs were used to facilitate the process.
- Created/modified Data Warehouse tables using SSIS programs and automated the processes.
- Using Power BI, created analytic tools to provide key business performance metrics, historical trends, or benchmarks; conducted data transformations and managed data pipelines; provided troubleshooting assistance to end-users.
- Setup interfaces to identify trends, patterns, anomalies, outliers, and opportunities for business improvement.
- Analyzed data, reviewed functional specs, defined and documented business requirements; performed testing and validation.
- Enhanced an existing web app (ASP.NET - Visual Studio) to add new functionalities.
- Created detailed designs, test plans, estimates and independently managed/executed a project.
- Conducted product demo and training for users; supported the application in production.
- Interacted with user community to upgrade specifications; took initiative to resolve issues to reach an amicable solution.
- Excellent verbal/written communication, negotiation, and time management skills, to prioritize multiple tasks.
- Improved performance of some ETL apps for high-risk clients – bringing down the total processing time from days to hours.

SENIOR PROGRAMMER, Partners Healthcare Systems, Wellesley/Boston, MA (1/2008 – 12/2014)

- Created Stored Procedures, functions, SQL scripts and other database constructs to support various business requirements.
- Developed and implemented complex SSIS/DTS packages for ETL work during applications interface integration. Coordinated tasks with DBAs and server administrators, for implementation and the smooth completion of the project.
- Worked with minimal oversight, managed multiple projects simultaneously, and took ownership of deliverables end-to-end.
- Created/enhanced SQL reports (SSRS); participated in deploying them and resolving issues in Production environment.
- Supported various .NET apps and data services in production, being a member of the 24/7 on-call support team.
- Working with the BWH Surgery Apps group, designed, developed, and deployed .NET Web apps (SQL database) to collect H&P, Brief Op-Notes, and other patient information. Got the H&P up and running within 2-3 months I joined PHS.
- Programmed, debugged, and enhanced PowerBuilder/Sybase codes for the Medical Management app, *Facets*.
- Developed Stored Procedures based DataWindows for a PowerBuilder application.
- Designed, developed, and deployed three C#.NET web apps to show OP patient-status in real-time using VS 2008 and XML data. Enhanced an existing C# web app to display transmission errors from SQL databases.
- Participated in migrating VB6 code to C#.NET for an Endoscopy scheduling project.
- Developed and implemented Reports (Crystal Reports & SQL Reports) for various business requirements.
- Assisted members in our team to move projects from VSS to TFS; gave them training and demo in TFS migration.

FREELANCE DEVELOPER, Remote (2024-25)

Data Analyst/ Data Partner, TELUS Digital, Las Vegas, NV

- Worked on Power BI, SSRS reports, Python and SSIS packages to support the ETL process.
- Power BI was used to build customizable, AI-generated (Artificial Intelligence) text summaries based on report pages. Q&A visuals helped users to explore and visualize data using natural language prompts and queries.
- As a part of a reasoning annotation project, several complex Prompt-Response Pairs (PRP) were created to enhance the capability and precision of AI models. Reviewed and revised each prompt to ensure solvability and accuracy.
- The AI model was instructed to provide its response in a step-by-step format; identified and corrected errors in the response.

EDUCATION

- Clark University Computer Institute, Cambridge, MA: Certificate in Client/Server Apps Development.
- Boston University, Boston, MA & New Horizons, Waltham, MA: VB, C#, ASP.NET Web Apps & SQL Development.
- University of Massachusetts, Lowell, MA: Certificate in UNIX, Java, C++, C# Programming.
- Saurashtra University, Gujarat, India: M.Sc. in Science.
- Calicut University, Kerala, India: Ph.D. In Science.
- PennState University Hershey, PA: Post-Ph.D. in Science.
