Education

Master of Science in Computer Science <i>University of Nevada Las Vegas, United States of America</i>	Aug 2022 –May 2024
Bachelor of Science in Electronics <i>RV College of Engineering, India</i>	Aug 2017 –May 2021

Experience

Software Engineer Palantir Technologies Remote,USA	Aug 2023 – present
- Designed and developed robust RESTful APIs using FastAPI, enabling seamless integration with frontend systems and external platforms, handling over 500,000 API requests daily with a 99.95% success rate and reducing response times by 20%. - Conducted performance analysis and optimization of backend applications using tools like Prometheus and Grafana improving response times by 30% and enhancing scalability to support 10x growth in user traffic through efficient resource utilization and code refactoring. - Designed and implemented scalable backend systems using Java and Python, supporting over 1 million daily transactions and ensuring 99.9% uptime through fault-tolerant distributed architectures. - Built and optimized microservices architecture, enabling seamless communication across services and reducing system downtime by 25% through enhanced fault isolation and scalability. - Built and maintained distributed data pipelines with Apache Kafka and Spark, processing terabytes of data daily and reducing data pipeline latency by 30%. - Deployed and managed cloud infrastructure on Google Cloud Platform (GCP) using Kubernetes and Docker, improving deployment times by 40% and supporting seamless scaling across diverse environments. - Enhanced system reliability and observability by implementing performance monitoring tools and achieving 95% test coverage, reducing production incidents by 20%.	
Research Assistant UNLV Las Vegas,USA	Aug 2022 – Aug 2023
- Advanced university data storage in AWS RDS, handling a database with more than 50,000 records and optimizing interactions and object-relational mapping using Spring Data JPA and Hibernate. - Optimized database interactions by restructuring query logic and implementing efficient caching in Hibernate, reducing the load on the legal case database by 15% while maintaining 99.9% data accuracy across client case records. - Distributed the web application in the University internal network using AWS Elastic Cluster Service and an application load balancer, reducing the application latency.	
Application Developer Oracle Hyderabad,India	Aug 2021 – Aug 2022
- Owned the successful implementation of Edition-Based Redefinition (EBR) for seamless database updates, ensuring 100% zero downtime and uninterrupted data access by developing and executing comprehensive scripts and processes. - Lowered component access time by 12% through optimization of the validation and data fetching logic in MVC architecture, enhancing overall system responsiveness and operational efficiency. - Implemented service-oriented architecture (SOA) solutions, increasing system interoperability and reducing service response times by 10%, resulting in improved efficiency for over 6 business applications. - Delivered a reduction in process time by significantly enhancing the message generation implementation. Streamlined deployment operations by engineering robust CI/CD pipelines with Jenkins. - Implemented advanced logic to integrate SOAP and RESTful APIs with XML, optimizing data handling processes in Java EE applications, which led to a reduction in data processing time and enhanced accuracy of input data routing. - Adopted Test-Driven Development, increasing the code coverage from 36% to 81% using JUnit and TestNG.	
Jr. Software Developer Genpact Bangalore,India	Jul 2020 – Jul 2021
- Designed and developed an Expense Tracker with Data Visualization, providing users a seamless interface to manage expenses and gain insights through dynamic charts, enhancing financial decision-making and user engagement. - Created a responsive user interface using React and integrated <code>Chart.js</code> for interactive data visualizations, ensuring a user-friendly experience across devices. - Implemented backend services with Spring Boot, enabling seamless CRUD operations for expense management while adhering to industry-standard RESTful API practices. - Designed and maintained a PostgreSQL database schema to store user transactions, applied indexing for faster queries, and ensured data consistency across expense categories and user profiles. - Deployed the application on AWS EC2, set up CI/CD pipelines using GitHub Actions, and monitored performance with CloudWatch, achieving 99.9% uptime and optimal response times.	

Technical Skills

Languages and Software: Python, SQL, C++, JavaScript, TypeScript, Java, C#, Kotlin
Databases: Oracle, MySQL, MongoDB, Aurora DB, Redis, Cassandra, Elasticsearch
Libraries and Frameworks: React, Node, Express, Hibernate, Spring Boot, Spring JPA, Spring MVC, J2EE, Next.js, JMS
Tools: Docker, Kafka, Git, Terraform, Maven, Jenkins, Grafana, Kubernetes, Netflix Eureka
Cloud: AWS, S3, RDS, IAM, Lambda, EC2, GCP

Certifications

AWS : Amazon Web Services Solution Architect Associate
