PROFESSIONAL SUMMARY

Experienced Java Developer with 5+ years of expertise in designing and developing scalable, secure, and efficient applications. Proficient in Core Java, Multithreading, Spring, and cloud-native application design principles. Adept at optimizing code, performing database tuning, and managing production environments. Strong communicator with a proven track record of identifying and troubleshooting production issues in real-time.

EDUCATION

University of North Texas
Master of Science in Data Science

Denton, TX
Jan 2022 – Dec 2023

EXPERIENCE

Java Full Stack Developer

August 2022 – Present

Northern Trust Bank

Chicago, IL

- Engineered secure and scalable backend applications using Core Java and Spring, handling large financial data transactions efficiently in a high-performance environment.
- Collaborated with cross-functional teams to design and implement micro-services based on cloud-native application design principles for enhanced real-time data processing and risk management functionalities.
- Optimized critical code sections, improving application performance by 25% through multithreading and database tuning with PostgreSQL and Cassandra.
- Developed unit and integration tests using JUnit and Cucumber, contributing to Software Development best practices and ensuring software reliability and robustness under different production scenarios.
- Troubleshot production issues by identifying system bottlenecks and optimizing the microservice communication flow using Kafka for messaging.
- Participated in code reviews, provided input for process enhancements, and ensured the use of best practices in application design.
- Deployed applications using Docker, improving containerization and environment consistency across development, staging, and production systems.
- Automated regression testing using Selenium to validate UI functionality, improving testing efficiency and coverage.
- Improved application performance by identifying and resolving production issues through code optimization and database tuning.

Java Developer

September 2020 – December 2021

UnitedHealth Group

Hyderabad, India

- Designed and implemented cloud-native stateless applications utilizing Java, Spring, and container technologies like Docker and Kubernetes for scalable deployment.
- Engineered secure REST APIs, ensuring seamless integration with internal systems and external partners in the healthcare domain.
- Led efforts in deploying and managing microservices on AWS, implementing efficient CI/CD pipelines and Continuous Integration processes using Jenkins, Git, and Argo for streamlined development and deployment processes.
- Monitored and maintained production systems, addressing production issues and optimizing systems to handle peak loads effectively, leveraging tools like Prometheus and Grafana for real-time monitoring.
- Conducted database performance tuning and optimization, including database modeling, on MongoDB, improving query efficiency by 30% in high-transaction environments.
- Provided guidance on troubleshooting production issues, consistently reducing downtime and improving service reliability.
- Used Kafka to implement real-time data streaming and message-based communication between microservices.
- Automated UI tests with Selenium and Cucumber to ensure seamless customer-facing application functionality.

- Configured and managed infrastructure deployments using Chef for efficient environment setup and consistency across cloud and on-prem systems.
- Reduced system latency through database tuning and optimization using Oracle and Cassandra.

Junior Java Developer

July 2019 – August 2020

IBM

Hyderabad, India

- Developed robust, cloud-based Java applications and microservices, adhering to 12-factor app principles for scalability and reliability in a distributed environment.
- Engineered real-time event-driven solutions utilizing Kafka, enabling efficient communication between microservices and improving the responsiveness of internal systems.
- Collaborated in agile sprints with product managers, QA engineers, and other stakeholders to build and deploy features while ensuring code quality and reliability.
- Utilized Spring Boot and Java Multithreading to handle high-volume financial data, ensuring the performance and scalability of critical applications.
- Enhanced database models and tuned SQL queries for optimal performance on Oracle and Cassandra, reducing system latency and increasing transaction throughput by 20%.
- Led troubleshooting sessions to resolve production-level issues, improving response times and system stability.
- Deployed microservices to Kubernetes clusters and used CI/CD pipelines for seamless automation of build and deployment processes.
- Automated end-to-end testing with Selenium and integrated Cucumber for behavior-driven testing to ensure proper business logic execution.
- Utilized Puppet for automated server provisioning and configuration management, ensuring consistency and reliability across all development environments.
- Implemented continuous delivery pipelines using Argo, improving deployment efficiency and reducing time-to-market.

PROJECTS & KEY ACHIEVEMENTS

- Attended several workshops and training programs on Cloud-Native Development, Microservices Architecture, and CI/CD best practices.
- Participated in the development and deployment of multiple high-impact financial systems, enhancing performance and ensuring reliable service delivery.

TECHNICAL SKILLS

Programming Languages: Core Java, Multithreading, Spring, Python, SQL

Frontend Technologies: Angular 12+, HTML, CSS, JavaScript

Frameworks: Spring Boot, Hibernate, Microservices

Databases: MongoDB, Cassandra, PostgreSQL, Oracle

Cloud Platforms: GCP (Google Cloud Platform), AWS

Messaging Systems: Kafka, FTL

Containerization: Docker, Kubernetes **Tools:** Jenkins, Git, Chef, Puppet, Argo

Testing Frameworks: Selenium, Cucumber, JUnit

Design Patterns: Microservices, Stateless Applications, 12-factor App

Other: Agile methodologies, CI/CD, Code Optimization, Troubleshooting, Unit Testing, database modeling, integration testing, release notes, design tools
