

Senior Full Stack .NET Developer

Sai Pramidha

Phone: +1 (216)-772-1698

Email: Pramidha04@gmail.com

PROFESSIONAL SUMMARY:

- Overall 9+ years of professional .NET development experience in designing and developing client-server applications, windows, and web-based solutions in various domains including enterprise applications using Microsoft Technologies.
- Proficiency in Software Development Life Cycle (SDLC) and AGILE methodologies of the development process including requirement analysis and definition, proof of concept, designing, coding, testing, and implementation.
- Extensive experience in C#, ASP.Net MVC, WCF, Web services, HTML5, CSS3, AJAX, JSP, JSTL, JQuery and other JavaScript libraries (jQuery, AngularJS, ReactJS and Bootstrap).
- Skilled in developing and consuming RESTful APIs and web services using C#, facilitating seamless integration between different systems and applications.
- In-depth understanding and experience in writing complex Database Queries, Stored procedures, Views, Indexes in MS SQL Server and PL/SQL.
- Expertise in creating SQL objects namely Tables, Stored Procedures, Views, Indexes, Triggers, Cursors, User-defined data types, and Functions using SQL.
- Experienced in using Language-Integrated Query (LINQ) query and retrieving data from different data sources (LINQ to Objects, and LINQ to SQL).
- Good knowledge of AWS (Amazon Web Services), working with AWS EC2, RDS, Dynamo DB, S3, EMR and AWS Cloud watch.
- Used ADO.NET extensively for retrieving, querying, storage, and data manipulation for achieving continuous database connectivity.
- Developed services using WCF (Windows Communication Foundation) technologies with Microsoft Enterprise library and Web service software factory.
- Experience in developing applications using ASP.NET MVC, ASP.NET Web Forms, LINQ and Windows Communication Foundation (WCF).
- Experienced in creating rich User Interface on the web using HTML5, WPF, XAML, DHTML, Master Pages, CSS3, Ajax, Bootstrap, JavaScript and jQuery.
- Expertise in developing applications to access data (Data Access Layers) and data services using ADO.NET and ADO.Net Entity Framework.
- Expertise in modern web architecture using various advanced JavaScript frameworks and libraries including AngularJS, NodeJS, ReactJS/Redux, Bootstrap, Ember.js, and Responsive web design (RWD).
- Proficient in integrating Typescript with modern front-end frameworks including Angular and React, optimizing for performance and scalability.
- Extensive experience in developing and deploying web applications using ASP.NET Core and ASP.NET MVC, following best practices for security and performance.
- Experienced in front-end development with Vue.js, enhancing user interface interactivity and responsiveness through component-based architecture.
- Proficient in designing and implementing RESTful APIs using ASP.NET Core Web API, ensuring robust and scalable backend services.
- Proficient in using GitHub for version control, code repository management, and collaborative software development. Managed branches, pull requests, and code reviews to ensure high-quality code.
- Proficient in using XML schemas (XSD) to define and validate XML data structures, ensuring data consistency and integrity.
- Proficient in designing and consuming RESTful APIs that utilize JSON for data interchange, ensuring seamless communication between client and server.
- Skilled in implementing SOAP message security features including WS-Security for encryption, signing, and secure token handling.
- Strong background in .NET development, with the ability to integrate Azure services for example Azure Logic Apps and Azure Service Bus into .NET applications, enhancing functionality and scalability.
- Adept at utilizing Azure Resource Manager (ARM) templates and Azure CLI for infrastructure as code (IaC), enabling consistent, repeatable deployments and management of Azure resources.

TECHNICAL SKILLS:

Languages	C#, SQL, PL/SQL, JavaScript, Typescript, XML, HTML5, CSS3
.Net Technologies	ASP.NET MVC, ASP.NET Core, WCF (Windows Communication Foundation), .NET Framework, Entity Framework, LINQ
Web Technologies	HTML5, CSS3, WPF, AJAX, Bootstrap, AngularJS, ReactJS, React Native, Vue.js, Node JS, Ember.js, Responsive Web Design (RWD), ASP.NET Web Forms
Databases	MS SQL Server, MySQL, Dynamo DB, PostgreSQL
ORM Frameworks	Entity Framework, Entity Framework Core
Web Servers	IIS (Internet Information Services)
Testing Frameworks	N Unit, ASP.NET MVC validation attributes

Web Services	RESTful APIs, SOAP, WCF Services, ASP.NET Web API, Swagger/Open API
Version Control Tools	Git, GitHub, SVN
Methodologies	Agile (SDLC), Scrum
Integration Technologies	MuleSoft (Any point Platform, API Manager, Data Weave), RabbitMQ, Signal R, Kafka
Cloud Technologies	AWS, Azure

PROFESSIONAL EXPERIENCE:

Molina Healthcare | Bothell, WA

Present

Senior Full Stack .NET Developer

March 2024-

Responsibilities:

- Worked in Planning and executing phases of the Software development lifecycle (SDLC) utilizing agile methodologies to achieve end-to-end development of web-based applications.
- Implemented Microservices Architecture utilizing Entity framework core, Rabbit MQ messaging queue, Signal R, and WEB API.
- Designed and implemented integration solutions using BizTalk Server, enhancing data exchange between disparate systems.
- Developed custom pipelines and maps in BizTalk to transform and route messages effectively.
- Designed and implemented micro services architecture for health applications using Azure Kubernetes Service (AKS) and Azure Service Fabric to ensure scalability and maintainability of applications.
- Designed and developed RESTful APIs using ASP.NET Web API, adhering to REST principles for creating scalable and interoperable state health applications, ensuring compliance with industry standards.
- Implemented design patterns for instance Singleton, Factory, and Dependency Injection (DI) in C# codebase to promote modularity, testability, and maintainability of the health applications.
- Used Microsoft Entity Framework Code First approach for the Data Access Layer for the ASP.NET MVC application and used Entity Framework for the use of LINQ-based Data Access.
- Integrated BizTalk with various external systems using REST, SOAP, and FTP protocols to facilitate seamless data flow.
- Implemented ADO.NET data access techniques i.e. SQL Connection Objects, SQL Command Objects, Data Set Objects, Data Reader Objects and Data Adapter Objects using Data Grid and Data List in ADO.NET.
- Implemented deferred execution and eager loading techniques with LINQ to optimize query performance and minimize database roundtrips.
- Utilized JSON Web Tokens (JWT) for authentication and authorization in .NET applications, enabling secure and stateless communication between clients and servers.
- Integrated JSON Patch and JSON Merge Patch techniques in .NET applications to support partial updates and atomic changes to JSON documents.
- Implemented Azure Logic Apps, Azure Functions, Azure Storage, and Service Bus Queues for large enterprise-level ERP Integration systems.
- Managed Azure resources using Azure Resource Manager (ARM) templates, Terraform, Azure CLI, and PowerShell scripts to automate resource provisioning and configuration.
- Managed and deployed Azure resources including VMs, Blob Storage, and Azure SQL Database for health applications, ensuring compliance with state health standards.
- Implemented JWT Token based authentication to secure the ASP.NET Web API and provided authorization to different users.
- Designed interactive ASP.NET MVC Razor views using Telerik MVC controls, ASP.NET controls, JavaScript, Knockout JS, HTML, Bootstrap, CSS and AJAX to provide excellent user experience.
- Responsible for React UI and architecture. Building components library, including Tree, Slide-View, and Table Grid.
- Used React JS to create more responsive webpages, which can be compatible with all the browsers and compatible with the different devices.
- Worked on React JS Virtual Dom and React views, rendering using components which contains additional components called custom HTML tags.
- Used JavaScript libraries to create slider and page-turning animations on calendar widgets.
- Designed and developed error handling using SSIS event handlers and log the error details to SQL table within SSMS (SQL Server Management Studio).
- Used SQL Stored Procedures for customer pagination, functions, completed performance tuning by optimizing SQL queries.
- Utilized Apache Kafka for efficient message queuing and real-time data streaming in developing applications.

Environment: Azure (Logic Apps, Functions, Storage, BizTalk, Service Bus Queues, Kubernetes Service, Service Fabric, Resource Manager, CLI), JWT Token, RESTful APIs, ADO.NET, Entity Framework Core, Rabbit MQ, Signal R, Swagger/Open API, GraphQL, LINQ, Entity Framework Code First, Telerik, Knockout JS, WCF, JSON, React JS, Virtual DOM, SSIS, SQL, Apache Kafka, PowerShell.

Responsibilities:

- Designed documents pertaining to client requirements, development, and testing, and attended daily Scrum meetings in an agile methodology of work.
- Created the application in .NET framework, and .NET core and implemented logic using C# and OOPS concepts.
- Developed ASP.NET MVC 5 applications using Code First Approach in Entity Framework and UI in Razor View Engine.
- Used ASP.NET Web API and worked with different HTTP verbs including Get, Post, Put, and Delete, and returned JSON format.
- Implemented CRUD functionality with Entity framework in ASP.NET MVC and implemented sorting, filtering, and paging with Entity framework in MVC.
- Utilized Web Sockets in ASP.NET applications to establish persistent connections and enable real-time data exchange between clients and servers.
- Worked thoroughly with JSON objects to perform RESTful operations and created user validation forms to verify valid data is being passed to the database.
- Implemented the Data Access Layer using LINQ and was involved in writing and maintaining complex SQL Queries and the required' Stored Procedures and Triggers.
- Implemented data access layers using ADO.NET to support multi-tiered application architectures, ensuring separation of concerns and maintainability.
- Conducted code reviews and implemented coding standards for ADO.NET implementations to ensure consistency, readability, and adherence to best practices.
- Implemented server-less architecture for .NET applications using AWS Lambda, AWS API Gateway, and AWS Dynamo DB, optimizing resource utilization and reducing operational overhead.
- Integrated MongoDB for handling non-relational data, optimizing data storage and retrieval for specific application modules.
- Proficient in performing thorough ETL testing to ensure data accuracy, completeness, and integrity throughout the data integration lifecycle.
- Designed and implemented API-led connectivity using Mulesoft, enabling seamless integration of multiple backend systems.
- Created and managed API specifications, policies, and security configurations using Mulesoft Anypoint Platform.
- Utilized Mulesoft API Manager to monitor, analyze, and optimize API performance, ensuring high availability and reliability.
- Utilized various Mulesoft integration patterns, including message routing, aggregation, and filtering, to optimize data flow and reduce latency.
- Adhered to Mulesoft best practices for designing scalable and reusable APIs, ensuring efficient maintenance and future enhancements.
- Configured and deployed Mulesoft applications across various environments (Development, QA, Production) using Anypoint Runtime Manager.
- Managed Mulesoft environment configurations and properties to support multi-tenant architecture and ensure smooth deployment pipelines.
- Collaborated with cross-functional teams to gather integration requirements and design end-to-end solutions using Mulesoft.
- Implemented continuous integration and continuous deployment (CI/CD) pipelines on AWS using tools which include AWS Code Pipeline and AWS Code Deploy to automate build, test, and deployment processes for .NET projects.

Environment: AWS (Lambda, API Gateway, Dynamo DB), .NET Core, C#, OOPS concepts, ASP.NET MVC 5, Entity Framework, Razor, JWT, OAuth, ASP.NET Web API, HTTP, JSON, ADO.NET, Web Sockets, LINQ, SQL, PL/SQL, PostgreSQL, Micro services architecture, MuleSoft, REST, WCF, SSIS, Visual Studio, JavaScript frameworks (React, ReactJS), HTML5, CSS3, jQuery.

Responsibilities:

- Developed dynamic web pages using Visual Studio 2017, ASP.NET, C#, and ASP .Net Web API, leveraging technologies such as Entity Framework 6, HTML5, CSS3, and Bootstrap.
- Configured, deployed, and supported cloud services, including Confidential Web Services (AWS), and wrote and ran test cases following Test-Driven Development (TDD) methodologies.
- Participated in agile processes with monthly sprints and daily scrums to discuss application development.
- Applied MVC design patterns, including Controller Actions, View Engine, HTML Helper methods, and Entity Framework Model, for the design and development of robust applications.
- Developed Single Page Applications (SPA) using MVC frameworks like React.JS.
- Contributed to the development of the Data Access layer, Business layer, and Application layer (UI) of 3-tier architecture web applications using C#.Net and SQL server, emphasizing reusability for data transactions.
- Developed classes in the Business Layer and Data Access Layer using C#, implementing sound architectural practices.

- Employed ASP.NET MVC framework to support Dependency Injection, injecting objects into classes.
- Integrated TypeScript components seamlessly with .NET backend services, optimized and refactored existing TypeScript code for improved performance and maintainability.
- Designed and coded WCF Service Contracts, Data Contracts, and Operation Contracts, contributing to the development of robust and scalable services.
- Designed and developed the Services API Layer using ASP.Net Web API (MVC Framework), adhering to Rest API standards and returning JSON data to the Presentation tier.
- Utilized node.js for building scalable server-side applications and APIs, managing asynchronous operations, and integrating with frontend frameworks like React.JS.
- Utilized Entity Framework 6 with a Database First Approach, mapping tables and procedures for the project.
- Wrote TypeScript code for .NET applications, optimizing database interactions through fine-tuning ADO.NET queries.
- Integrate TypeScript seamlessly with .NET backend services to facilitate end-to-end application functionality.
- Integrated VB.NET applications seamlessly with backend services and databases, ensuring efficient functionality.
- Authored comprehensive documentation for VB.NET codebase, ensuring clarity and facilitating knowledge transfer.
- Employed React.JS for creating interactive UIs using One-way data flow, Virtual DOM, JSX, and React Native concepts.
- Implemented various screens for the frontend using React.JS, used predefined components from NPM and the Redux library, and employed React-Router for Single Page Application functionality.
- Configure and deploy scalable and secure .NET applications on AWS, ensuring optimal performance and reliability.
- Implement AWS services, EC2, S3, Lambda, and RDS, to support the development, deployment of .NET solutions.

Environment: C#, Visual Studio 2017, ASP.NET MVC 6.0/5.0, ASP.NET4.5, ADO.NET, Entity Framework 6.0/4.0, Web API, IIS 7.0, jQuery, AJAX, Node.js, TFS 2010, XML, LINQ, NUNIT, XML, XSLT, Boot Strap, React, SQL Server, AWS.

Broadridge Financial | Lake Success, NY
Senior .NET Developer

April 2018 – May 2020

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) using Agile Methodology.
- Involved in the development of Web Forms using the .NET Framework.
- Implemented Web Services in C# based on SOAP Protocol using XML and XSMIL extensively for data transfer.
- Used ADO.NET Connection, Command, Datasets, Data Adapter, Data Reader and XML to retrieve and store the data in SQL Server.
- Integrated and utilized Entity Framework with ASP.NET MVC or ASP.NET Web API projects to provide seamless data access and persistence.
- Developed responsive web applications using Typescript, HTML5 and CSS3, ensuring cross-browser compatibility and optimal performance.
- Implemented AngularJS Controllers to maintain each view data and Service calls using angular Factory.
- Utilized Typescript's strong typing system to detect and eliminate potential runtime errors, thereby improving code reliability.
- Used X-unit for component testing and end-to-end testing.
- Utilized testing tool SOAP UI for API testing, documentation, and ensuring adherence to industry standards in the development of applications.
- Utilized Selenium for automated testing of web applications, ensuring consistent performance and reliability.
- Developed and maintained CI/CD pipelines using Azure DevOps to streamline the build, test, and deployment process of the health applications.
- Created the design documents using Swagger Editor to allow an understanding of the product from both a technical and non-technical standpoint.
- Created and maintained RESTful APIs using ASP.NET Web API and developed GraphQL endpoints for efficient data querying and manipulation.
- Integrated Swagger/Open API specifications into RESTful APIs to automate API documentation generation and facilitate client-side SDK generation.
- Developed Windows Services and background processing tasks in C# to automate recurring operations and improve system efficiency.
- Designed and developed Services using WCF and also leveraged WCF security mechanism at transport level with windows authentication type for our intranet applications.
- Involved in developing HTML and JavaScript for client-side presentation and, data validation on the client side within the forms.
- Created stored procedures, packages, database views and worked with T-SQL queries for the underlying SQL Server Database.
- Developed Unit Test Scenarios and tested Test Scenarios in Web methods using N-Unit.
- Used SVN for version control and Managed project tasks and workflows using JIRA.

Environment: C#.NET, Agile, SOAP, XML, XSMIL, ASP.NET MVC, ADO.NET, Entity Framework, T-SQL, SQL server, CSS3, Typescript, HTML5, AngularJS, SVN, JIRA.

Responsibilities:

- Designed different .NET components using VB, C# language for enterprise-level web applications using Object Oriented Programming techniques like Encapsulation, Polymorphism, Inheritance, Interfaces etc.
- Plan, design, and configure automated solutions for Workstations and operating system deployments with MDT and SCCM, Power Shell, batch files, and VBScript.
- Also performed health assessments for existing SCCM environments, Computer Deployment Assessments, and consulted on Waa's (Windows as a Service).
- Developed the UI (user interface) using ASP.NET, MVC5, HTML5, CSS3, Angular 3 4, Bootstrap, Ajax, jQuery, Angular.JS and Telerik controls. Developed the components like Controllers, Views, Layouts, Action Filters in ASP.NET, MVC5.
- Developed front end for the entire website using HTML5, CSS3, and JavaScript.
- Built the Responsive UI screen using HTML5, CSS3 and Bootstrap.
- Migrating an On-premises virtual machine to Azure Resource Manager Subscription with Azure Site Recovery.
- Developed HTML prototype documents with CSS Style Sheets. Worked on MSMQ Windows Services.
- Followed Agile Development methodologies with daily scrums for the application development.
- Created and consumed WCF & WEB API web services for implementing business logic.
- Used WPF in creating different animated scenes using the combination of transforms, animation and color effects. Wrote Stored Procedures, Triggers and SQL Queries and LINQ in SQL Server.
- Developed and consumed ASP.NET web services and WCF Services (ASP.NET 4.5) to achieve Service Oriented Architecture (SOA) and communication between heterogeneous applications.
- Worked on Visual Studio 2015/ .Net CORE 1.0 Framework to implement Business Logic.
- Involved in building the new application from scratch and involved in migrating the application from Angular 2.0 to Angular 4/5 and .Net 4.5 to Net CORE 1.0.
- Identifying opportunities to improve infrastructure that effectively and efficiently utilizes Office 365 and the Microsoft Azure Windows server 2008/2012/R2, Microsoft SQL Server, Microsoft
- Implemented WCF Contracts such as Service Contract, Operation Contract, and Data Contract.
- Developed and maintained stored procedures, User Defined Functions, Indexes, Views, Tables and Relationships on SQL Server 2012 database. Developed Restful APIs for the third-party systems using WEB API.
- Wrote SQL queries, views, functions and triggers in Microsoft SQL Server 2005/2008/2012.
- Worked on Multithreading techniques for creating high performance applications.
- Worked in MSSQL Reporting Service (SSRS) to generate reports and charts. Used IIS for hosting web application.

Environment: .NET Framework 4.5, .Net Core 1.0 ASP.NET MVC5.0, Web Services, REST, WCF, ASP.NET, OOD, OOPs, XML, HTML5, CSS3, Angular.JS, jQuery.
